Additional file 5. Distribution of σ^{70} prediction scores and 5'UTR lengths in *BAp* and *E. coli*. (A) Distribution of σ^{70} prediction scores in *BAp* (black) and *E. coli* (red) at the beginning of transcription units (continuous lines) and within transcription units (dotted lines); (B) Distribution of the size of the predicted 5'UTR. Scores and UTR lengths are calculated by BPROM.
