**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A reconstruction of  
Voisin's table of quarter-squares  
(1817)

Denis Roegel

12 april 2013

# 1 The method of quarter-squares

The method of quarter-squares is a multiplication method which makes use of the identity

$$ab = \frac{1}{4} \left( (a+b)^2 - (a-b)^2 \right).$$

If we possess a table of squares, and wish to compute the product  $ab$ , it is then sufficient to compute  $a+b$ ,  $a-b$ , to look up the table for these two values, to subtract the values read in the table, and to divide the result by 4. This seems complex, but for large numbers it is more efficient than to compute directly the product.<sup>1</sup>

There have been a number of tables of squares around, in particular those of Ludolf published in 1690 [26], and those published by Séguin in 1801 and giving the squares up to 10000. But these authors did not have multiplications in mind. At the beginning of the 19th century, the method of quarter-squares was mentioned in passing by Laplace in 1809 [7, p. 261] and Gergonne in 1816 [9, pp. 159–160], but they did not produce tables.

## 2 Voisin's table (1817)

In 1817, Antoine Voisin<sup>2</sup> published what is thought to be one of the first two tables of quarter-squares [35], the other one—and very similar—by Bürger [3]. Voisin called his quarter-squares “logarithms,” although they were not logarithms.<sup>3</sup> It is not clear why he decided to name them like that, and no explanation is given in the author’s introduction. Voisin understood that a table of squares could be useful for multiplications, but he went one step beyond, and removed the need to divide the difference of the squares by 4. His table gave the quarter-squares for all integers up to 20000 (figures 1 and 2).

More exactly, when a number is odd, its quarter-square is of the form  $n + 0.25$  and Voisin only gave the value  $n$ . So if  $a$  and  $b$  are both odd or both even, the values of the quarter-squares are given exactly. If one of the integers is odd and the other is even, both quarter-squares are in default by 0.25, but the difference of these two values is correct. So, although Voisin’s table is not totally accurate for a table of squares, it serves the purpose of a table of multiplication. If one wished to use it as a table of squares, one would need to remember to add 1 to the result multiplied by 4, whenever the value entered is odd.

A table of quarter-squares is also very advantageous with respect to space. Such a table is a linear table, with only one entry. With slightly more work than a mere table of multiplication, it is possible with a table of quarter-squares to do computations that would require many thousands of pages with a conventional table of multiplication, such as Crelle’s table [6].

In 1820, in the second edition of his *Philosophy of arithmetic* [25, pp. 246–257], John Leslie described tables of quarter-squares, and in particular Voisin’s table, of which he

<sup>1</sup>For a survey of the quarter-square method, see the articles by McFarland [28, 27] and Weiss [36].

<sup>2</sup>Very little is known of Voisin. He was “commissaire-priseur” (auctioneer) and his name appears in particular in the *Almanach impérial* for the 13th year of the Republic (1804–1805) [37, p. 823], the *Almanach de la cour et de l’Empire français* for 1813 [32, p. 171], and the *Almanach royal* for 1830 [1, p. 813]. His residence was 15 rue Guénégaud in Paris.

<sup>3</sup>In his 1959 review of alternative methods of simplified computations, entitled “Pseudo logarithms,” Larsen describes among other things the quarter-squares method.

gave an excerpt up to 2000. Leslie expressed the hope that someone would compute a table up to 200000.

Voisin's table is nowadays extremely rare. In 1873, Glaisher wrote that he had not seen any copy, but that there was supposedly one in the Graves library [10, p. 23]. Eventually, Glaisher gave a more detailed description of Voisin's table in 1889 [12], and we assume that he then had seen it.

### 3 Later tables of quarter-squares

A number of other tables of quarter-squares were published during the 19th century. We have already mentioned Bürger's table [3] which was published the same year as Voisin's table and has the same range. Centnerschwer [4] published a table of quarter-squares in 1825, Kulik in 1833 and 1851 [19, 20], Laundy in 1856 [24], and Blater in 1887 [2]. In a book published in 1857, Edward Sang also suggested the use of quarter-squares for multiplications [5, pp. 50–51].

The use of quarter-squares declined in the first half of the 20th century [28]. In the 1950s, however, new applications of the quarter-squares method for multiplication on analog devices surfaced, and this prompted their use for the implementation of multiplication in digital processors [17, 18].

### 4 Structure of Voisin's table and reconstruction

Voisin's table is very simple, with three or four double columns per page, each double column having 50 lines. For  $n$  from 1 to 6200 (31 pages), there are four double columns. For  $n$  from 6201 to 20000 (92 pages), there are three double columns. For each value of  $n$ , the table gives the value of  $\lfloor n/4 \rfloor$ . For instance, for  $n = 1419$ , we find the value 503390. The reconstruction of Voisin's table was therefore most straightforward.

Figure 1: The title page of Voisin's table.

The image shows an open book with two pages filled with handwritten mathematical tables. The left page contains entries from row 11601 to 11625, and the right page contains entries from 11626 to 11755. Each entry consists of four columns of numbers representing quarter-squares.

| $n$    | Quarter-Square 1 | Quarter-Square 2 | Quarter-Square 3 |
|--------|------------------|------------------|------------------|
| 11601  | 33645800         | II1651           | 33936450         |

<sup>4</sup>**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.

meeting of the British Association for the advancement of science,” London: John Murray, 1874.
