HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

RECHERCHE EN INFORMATIQUE AMBIANTE (I3S/UNS/CNRS)

« Silicon-based information technology, is far from having become part of the environment »

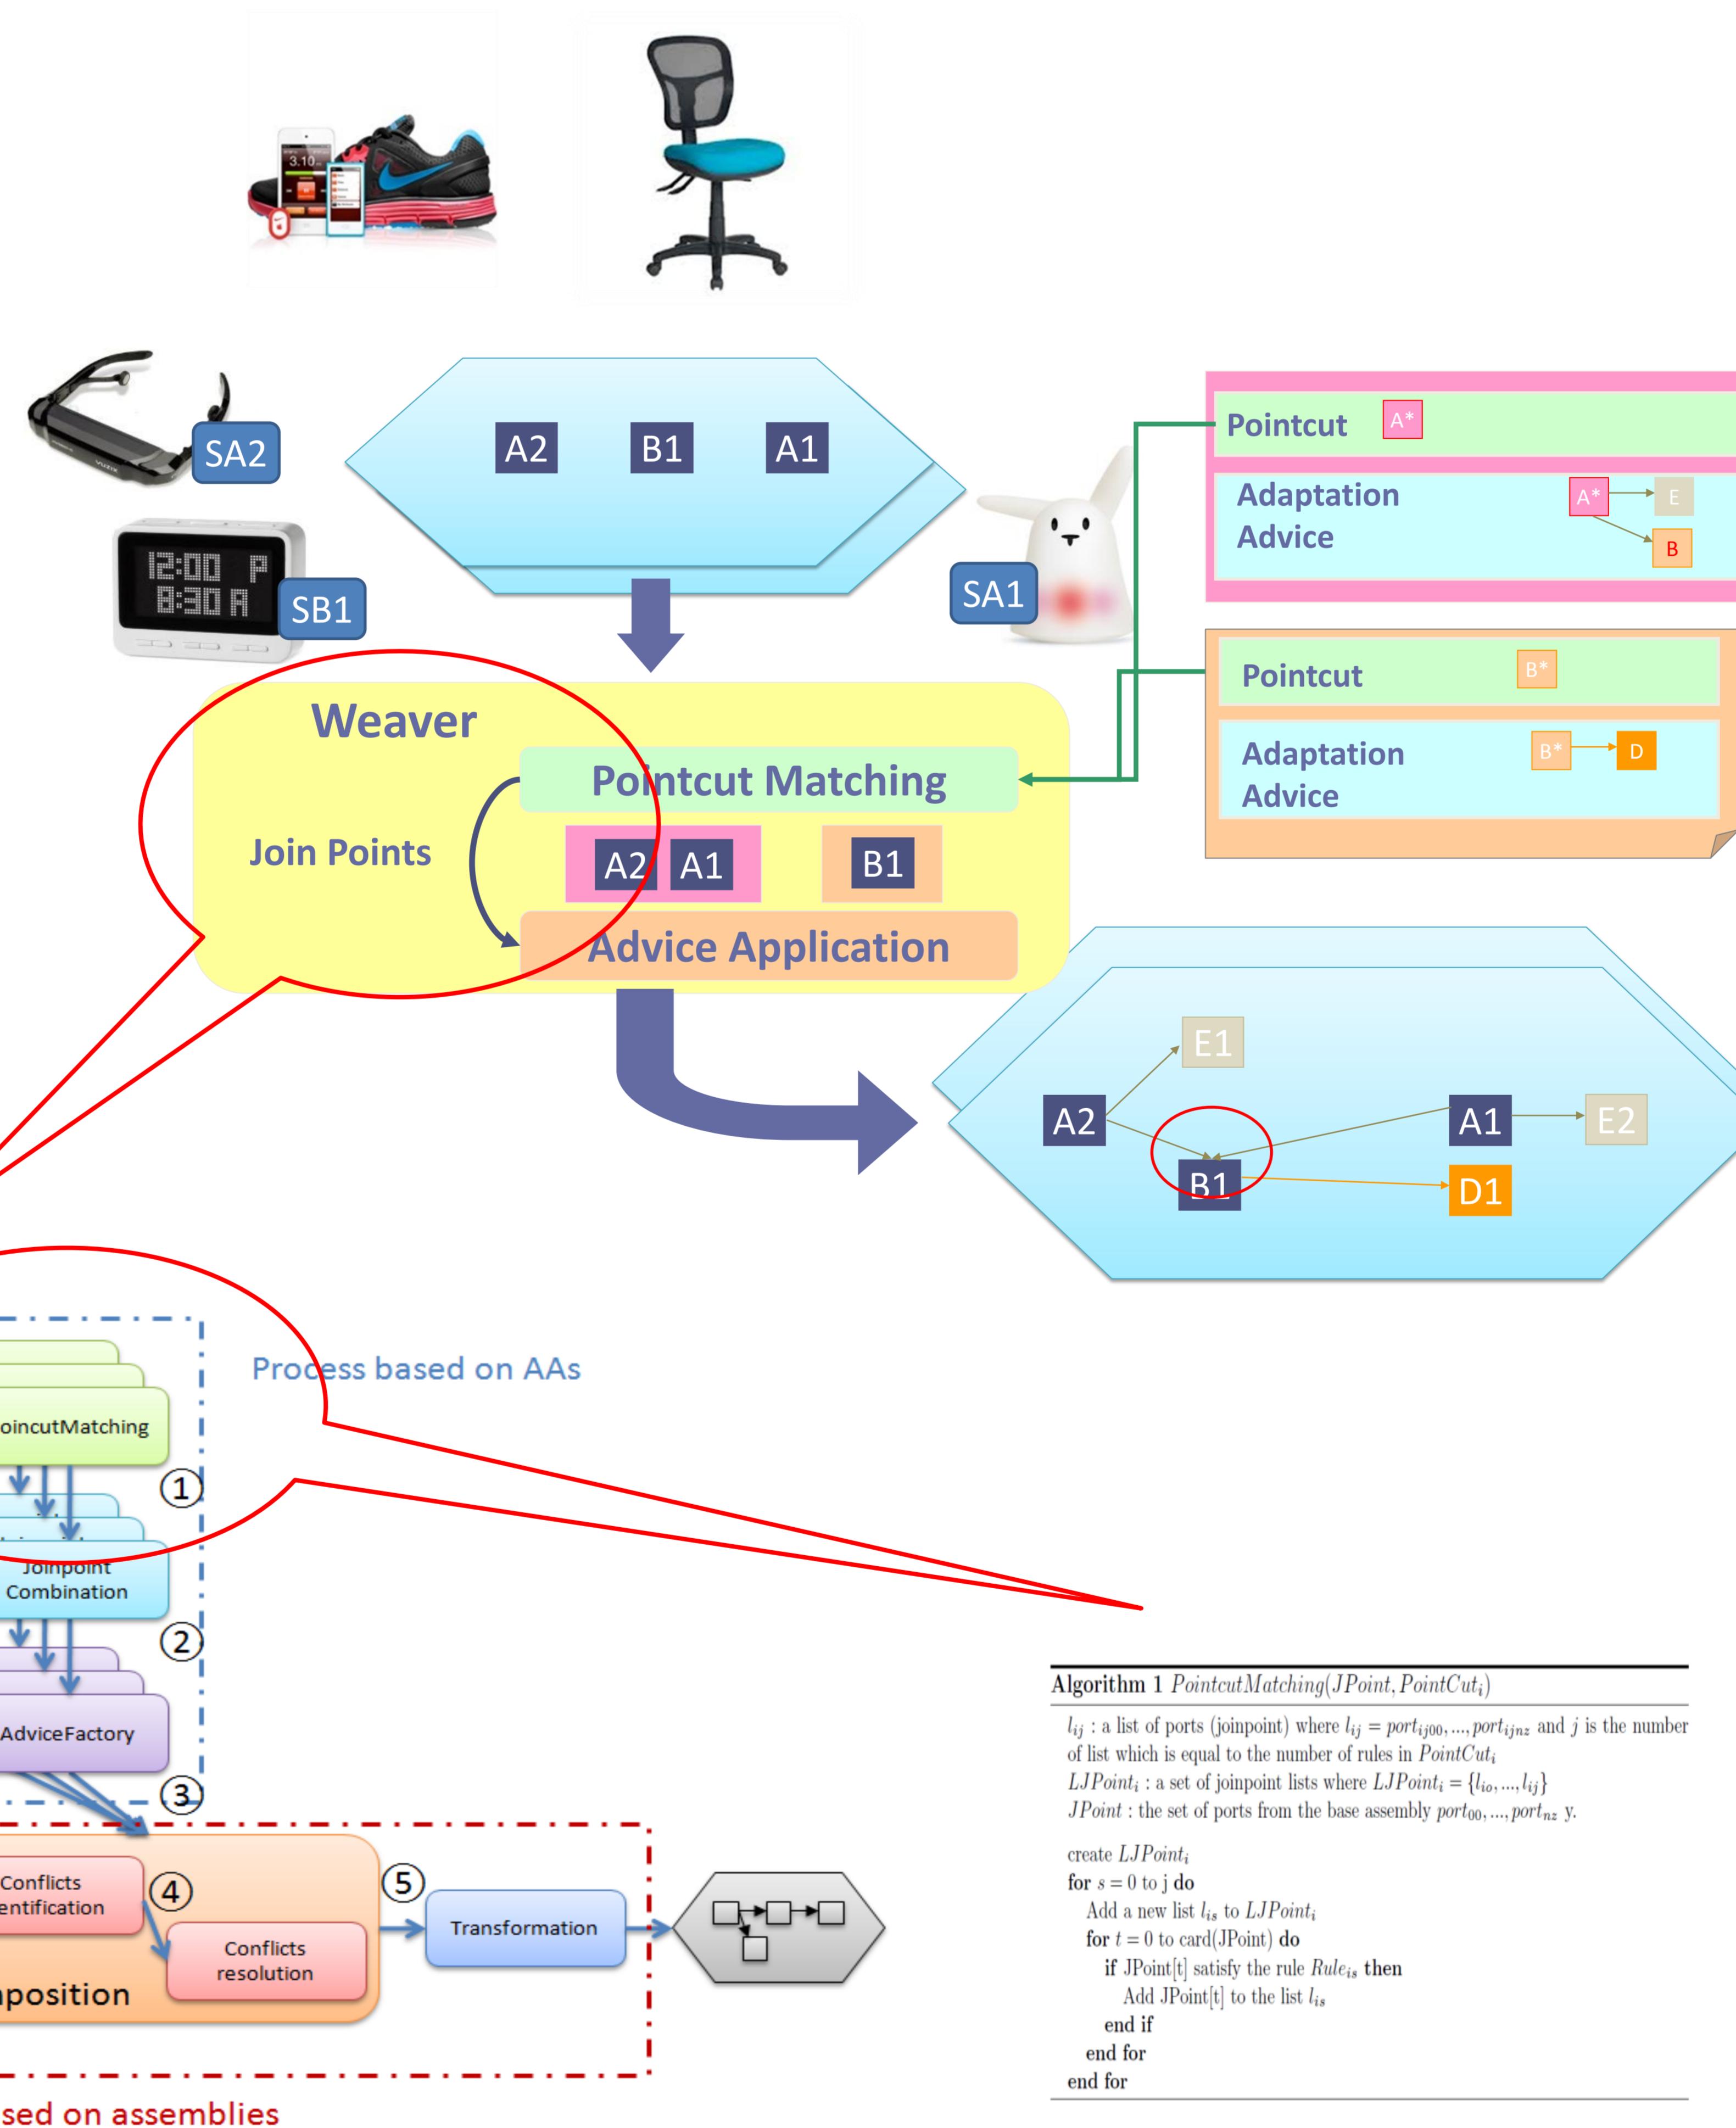

Mark Weiser, *Scientific American*, Vol. 265 N.9, pp. 66-75, 1991

« Calm Technology » ou « mettre en œuvre une intelligence collective logicielle entre les Objets Communicants pour mieux servir l'usager »

Weiser & Brown. "Designing Calm Technology", *PowerGrid Journal*, v 1.01, 1996

Adaptation et cohérence

Algorithm 1 PointcutMatching($JPoint, PointCut_i$)
 I_{ij} : a list of ports (joinpoint) where $I_{ij} = port_{i,j,0}, \dots, port_{i,j,n_j}$ and j is the number of list which is equal to the number of rules in $PointCut_i$.
 $LJPoint_i$: a set of joinpoint lists where $LJPoint_i = \{l_{i,0}, \dots, l_{i,j}\}$.
 $JPoint$: the set of ports from the base assembly $port_{0,0}, \dots, port_{n_x, Y}$.

```
create LJPoint_i
for s = 0 to j do
    Add a new list  $l_{i,s}$  to  $LJPoint_i$ 
    for t = 0 to card(JPoint) do
        if  $JPoint[t]$  satisfy the rule  $Rule_{i,s}$  then
            Add  $JPoint[t]$  to the list  $l_{i,s}$ 
        end if
    end for
end for
```
