**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A reconstruction of  
Plassmann's table of quarter-squares  
(1933)

Denis Roegel

2013

(last version: 6 november 2013)

# 1 The method of quarter-squares

The method of quarter-squares is a multiplication method which makes use of the identity

$$ab = \frac{1}{4} \left( (a+b)^2 - (a-b)^2 \right).$$

If we possess a table of squares, and wish to compute the product  $ab$ , it is then sufficient to compute  $a+b$ ,  $a-b$ , to look up the table for these two values, to subtract the values read in the table, and to divide the result by 4. This seems complex, but for large numbers it is more efficient than to compute directly the product.<sup>1</sup>

There have been a number of tables of squares around, in particular those of Ludolf published in 1690 [30], and those published by Séguin in 1801 and giving the squares up to 10000. But these authors did mostly not have multiplications in mind, although Ludolf showed how squares could be used to compute a multiplication. At the beginning of the 19th century, the method of quarter-squares was mentioned in passing by Laplace in 1809 [8, p. 261] and Gergonne in 1816 [12, pp. 159–160], but they did not produce tables.

## 2 The first tables of quarter-squares (1817)

In 1817, Voisin [50] and Bürger [3] published independently the first tables of quarter-squares. Voisin and Bürger both understood that a table of squares could be useful for multiplications, but they went one step beyond, and removed the need to divide the difference of the squares by 4. Their tables gave the quarter-squares for all integers up to 19999 (Bürger) and 20000 (Voisin).

More exactly, when a number is odd, its quarter-square is of the form  $n + 0.25$  and Voisin and Bürger only gave the value  $n$ . So if  $a$  and  $b$  are both odd or both even, the values of the quarter-squares are given exactly. If one of the integers is odd and the other is even, both quarter-squares are in default by 0.25, but the difference of these two values is correct. So, although the tables of Voisin and Bürger are not totally accurate for a table of squares, they serve the purpose of a table of multiplication. If one wished to use them as a table of squares, one would need to remember to add 1 to the result multiplied by 4, whenever the value entered is odd.

A table of quarter-squares is also very advantageous with respect to space. Such a table is a linear table, with only one entry. With slightly more work than a mere table of multiplication, it is possible with a table of quarter-squares to do computations that would require many thousands of pages with a conventional table of multiplication, such as Crelle's table [6].

In 1820, in the second edition of his *Philosophy of arithmetic* [29, pp. 246–257], John Leslie described tables of quarter-squares, and in particular Voisin's table, of which he gave an excerpt up to 2000. Leslie expressed the hope that someone would compute a table up to 200000.

---

<sup>1</sup>For a survey of the quarter-square method, see the articles by McFarland [32, 31] and Weiss [51].

| Table                | Range  | Pages | Density |
|----------------------|--------|-------|---------|
| Voisin (1817)        | 20000  | 123   | 162.6   |
| Bürger (1817)        | 20000  | 80    | 250.0   |
| Centnerschwer (1825) | 20000  | 40    | 500.0   |
| Merpaut (1832)       | 40000  | 400   | 100.0   |
| Kulik (1851)         | 30000  | 40    | 750.0   |
| Laundy (1856)        | 100000 | 200   | 500.0   |
| Blater (1887)        | 200000 | 200   | 1000.0  |
| Bojko (1909)         | 20000  | 20    | 1000.0  |
| Plassmann (1933)     | 20009  | 200   | 100.0   |

Table 1: A comparison of the main tables of quarter-squares. The density is the ratio of the range by the number of pages. The tables which pack the greatest ranges in the smallest number of pages are those of Blater and Bojko.

### 3 Later tables of quarter-squares

A number of other tables of quarter-squares were published during the 19th century (table 1). Centnerschwer [4] published a table of quarter-squares up to 20000 in 1825, Kulik in 1833 and 1851 (up to 30000) [22, 23], Merpaut in 1832 (up to 40000) [33], Laundy in 1856 [27], and Blater in 1887 [1]. Laundy’s table gave the quarter-squares up to 100000, whereas Blater extended it to 200000. In 1836, Galbraith published a small table of quarter-squares in a more general collection of tables [11]. This table was probably borrowed from Voisin’s table.

In the preface of his table of quarter-squares [27, p. iv], Laundy also mentions that Peter Gray had in his possession a manuscript of a table of quarter-squares extending to 200000 by Shortrede, but that table was never published.

There have also been several applications of quarter-squares for mechanical aids. In 1829, Schiereck invented a calculating machine based on quarter-squares [52] and in 1841 he devised an instrument for the measurement of the area of triangles, useful in surveying, and also based on quarter-squares [47, 19].

In a book published in 1857, Edward Sang also suggested the use of quarter-squares for multiplications [5, pp. 50–51].

The use of quarter-squares declined in the first half of the 20th century [32], but Bojko in 1909 [2] and Plassmann in 1933 [35] each published tables of quarter-squares up to 20000. In the 1950s, however, new applications of the quarter-squares method for multiplication on analog devices surfaced, and this prompted their use for the implementation of multiplication in digital processors [20, 21].

Finally, we mention that tables of triangular numbers can also be used in a way similar to quarter-squares in order to facilitate the multiplications [7].

## 4 Plassmann

Joseph Plassmann (1859–1940) was a professor of astronomy in Munster, Germany. He made observations of variable stars and published a number of popular works in astronomy, in particular his *Himmelskunde : Versuch einer methodischen Einführung in die Hauptlehren der Astronomie* in 1898.

In 1933, Plassmann published his table of quarter-squares, which could also be used to find squares, or square roots. In the introduction to his table, Plassmann also gives a number of developments for various constants, in order to make it easier to multiply by these constants.

## 5 Structure of Plassmann’s table and reconstruction

Plassmann’s table gives the quarter-squares of all integers from 0 to 20009 and spans 200 pages. A comparison with Laundry’s table shows that the arrangement of the values is practically the same, only that Plassmann puts on two pages two fifths of what Laundry puts on one page. Each double page of Plassmann’s table covers a range of 210 values, on 21 lines of 10 columns. There is an overlap between one double page and the next one. The first double page gives the quarter-squares from 0 to 209. The second double page gives the quarter-squares from 200 to 409, the third double page from 400 to 609, and so on, the last double page giving the quarter-squares from 19800 to 20009.

Quarter-squares are given in full. For instance, on the last double page, we find the quarter-square of 19834 which is given at the intersection of line 1983 and column 4: 98346889.

Some of the values are appended with a dot, meaning that the exact quarter-square is not an integer, but that integer plus 0.25. For instance, the quarter-square of 19833 is given as “98336972.” meaning that its real value is 98336972.25.

Plassmann’s table also gives the squares. Each quarter-square is in fact the square of another number. This is of course also true of other tables of quarter-squares, but Plassmann’s table provides an explicit and easy access to these squares. Such an explicit access could have been provided by Merpaut or Laundry. Using  $q(x)$  for the exact (non-integer) quarter-square, we have  $q(10n) = 25n^2 = (5n)^2$ . Consequently, the first column of every double page of Plassmann’s table gives the squares of integers increasing by steps of 5. On the last double page, the first column gives the squares of 9900, 9905, 9910, 9915, etc. and these values are given in the last column at the right. The nine remaining values of a line are also squares, since  $q(10n + m) = 25n^2 + \frac{m^2}{4} + 5nm = (5n + m/2)^2$ . The first of the two lines at the bottom give the values 0.0, 0.5, 1.0, 1.5, ..., 4.5, which are the values of  $m/2$ . Therefore, the first line of the last double page gives the squares of 9900, 9900.5, 9901, 9901.5, 9902, ..., up to 9904.5. The second line gives the squares of 9905, 9905.5, ...

Plassmann does not give any historical background and we do not know which other tables of quarter-squares he had seen, if any. The fact that Plassmann gives the values in full may mean that he had actually not seen the more condensed tables of Kulik or Blater, for instance.

| N.   | 0     | 1      | 2     | 3      | 4     |
|------|-------|--------|-------|--------|-------|

<sup>2</sup>**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
