Motivation

Examples of the seismic applications

Motivation

Examples of the seismic applications

Motivation

Imaging method : the full wave inversion

- Quantitative **high resolution** images of the subsurface physical parameters

Forward problem of the inversion process

- Elastic waves propagation in harmonic domain : **Helmholtz equation**

Motivation

Imaging method : the full wave inversion

- Quantitative **high resolution** images of the subsurface physical parameters

Forward problem of the inversion process

- Elastic waves propagation in harmonic domain : **Helmholtz equation**

Motivation

Seismic imaging in heterogeneous complex media

- Complex topography
- High heterogeneities

DG method

- Use of triangular unstructured meshes
- Flexible choice of interpolation orders (p – adaptativity)

Motivation

Seismic imaging in heterogeneous complex media

- Complex topography
- High heterogeneities

DG method

- Use of triangular unstructured meshes
- Flexible choice of interpolation orders (p – adaptativity)

Motivation

Drawback of DG method

- Important computational cost

Main objective of the thesis

- Development of an hybridizable DG (HDG) method
- Development of a reference method, a classical DG method

Motivation

Drawback of DG method

- Important computational cost

Main objective of the thesis

- Development of an hybridizable DG (HDG) method
- Development of a reference method, a classical DG method

2D Helmholtz elastic equations

First order formulation of Helmholtz wave equations

$\mathbf{x} = (x, y) \in \Omega \subset \mathbb{R}^2$,

$$\begin{cases} i\omega \rho(\mathbf{x}) \mathbf{v}(\mathbf{x}) = \nabla \cdot \underline{\underline{\sigma}}(\mathbf{x}) + \underline{f}_s(\mathbf{x}) \\ i\omega \underline{\underline{\sigma}}(\mathbf{x}) = \underline{\underline{C}}(\mathbf{x}) \underline{\underline{\varepsilon}}(\mathbf{v}(\mathbf{x})) \end{cases}$$

- Free surface condition : $\underline{\underline{\sigma}} \mathbf{n} = 0$ on Γ_f
- Absorbing boundary condition : $\underline{\underline{\sigma}} \mathbf{n} = \underline{v}_p(\mathbf{v} \cdot \mathbf{n}) \mathbf{n} + \underline{v}_s(\mathbf{v} \cdot \mathbf{t}) \mathbf{t}$ on Γ_a
- \mathbf{v} : velocity vector
- $\underline{\underline{\sigma}}$: stress tensor
- $\underline{\underline{\varepsilon}}$: strain tensor

2D Helmholtz elastic equations

First order formulation of Helmholtz wave equations

$\mathbf{x} = (x, y) \in \Omega \subset \mathbb{R}^2$,

$$\begin{cases} i\omega \rho(\mathbf{x}) \mathbf{v}(\mathbf{x}) = \nabla \cdot \underline{\underline{\sigma}}(\mathbf{x}) + \underline{f}_s(\mathbf{x}) \\ i\omega \underline{\underline{\sigma}}(\mathbf{x}) = \underline{\underline{C}}(\mathbf{x}) \underline{\underline{\varepsilon}}(\mathbf{v}(\mathbf{x})) \end{cases}$$

- Free surface condition : $\underline{\underline{\sigma}} \mathbf{n} = 0$ on Γ_f
- Absorbing boundary condition : $\underline{\underline{\sigma}} \mathbf{n} = v_p(\mathbf{v} \cdot \mathbf{n}) \mathbf{n} + v_s(\mathbf{v} \cdot \mathbf{t}) \mathbf{t}$ on Γ_a

- ρ : mass density
- $\underline{\underline{C}}$: tensor of elasticity coefficients
- f_s : source term, $f_s \in L^2(\Omega)$
- v_p : P-wave velocity
- v_s : S-wave velocity

2D Helmholtz isotropic elastic equations

First order formulation of Helmholtz isotropic wave equations

$$\left\{ \begin{array}{lcl} i\omega v_x & = & \frac{1}{\rho} \left(\frac{\partial \sigma_{xx}}{\partial x} + \frac{\partial \sigma_{xz}}{\partial z} \right) \\ i\omega v_z & = & \frac{1}{\rho} \left(\frac{\partial \sigma_{xz}}{\partial x} + \frac{\partial \sigma_{zz}}{\partial z} \right) \\ i\omega \sigma_{xx} & = & (\lambda + 2\mu) \frac{\partial v_x}{\partial x} + \lambda \frac{\partial v_z}{\partial z} \\ i\omega \sigma_{zz} & = & \lambda \frac{\partial v_x}{\partial x} + (\lambda + 2\mu) \frac{\partial v_z}{\partial z} \\ i\omega \sigma_{xz} & = & \mu \left(\frac{\partial v_x}{\partial z} + \frac{\partial v_z}{\partial x} \right) \end{array} \right.$$

λ and μ Lamé's constants and $v_p = \sqrt{\frac{\lambda + 2\mu}{\rho}}$ and $v_s = \sqrt{\frac{\mu}{\rho}}$

2D Helmholtz isotropic elastic equations

Vectorial form

$$i\omega \mathbf{Q} + \mathbf{A}_x \frac{\partial \mathbf{Q}}{\partial x} + \mathbf{A}_z \frac{\partial \mathbf{Q}}{\partial z} = 0$$

where $\mathbf{Q} = (v_x, v_z, \sigma_{xx}, \sigma_{zz}, \sigma_{xz})^T$ and :

$$\mathbf{A}_x = - \begin{pmatrix} 0 & 0 & \frac{1}{\rho} & 0 & 0 \\ 0 & 0 & 0 & 0 & \frac{1}{\rho} \\ \lambda + 2\mu & 0 & 0 & 0 & 0 \\ \lambda & 0 & 0 & 0 & 0 \\ 0 & \mu & 0 & 0 & 0 \end{pmatrix}, \quad \mathbf{A}_z = - \begin{pmatrix} 0 & 0 & 0 & 0 & \frac{1}{\rho} \\ 0 & 0 & 0 & \frac{1}{\rho} & 0 \\ 0 & \lambda & 0 & 0 & 0 \\ 0 & \lambda + 2\mu & 0 & 0 & 0 \\ \mu & 0 & 0 & 0 & 0 \end{pmatrix}$$

DG methods in time domain for seismic applications

DG methods in time domain for seismic applications

- M. Dumbser and M. Käser, *An arbitrary high-order discontinuous Galerkin method for elastic waves on unstructured meshes - II; The three-dimensional isotropic case*, 2006 (**upwind scheme**)
- S. Delcourte, L.Fezoui and N. Glinsky-Olivier, *A high order discontinuous Galerkin method for the seismic wave propagation*, 2009 (**centered scheme**)

Notations and definitions

Notations

- Γ_f free surface boundary
- Γ_a the absorbing boundary
- \mathcal{T}_h mesh of Ω composed of triangles K
- \mathcal{F}_h set of all faces F of \mathcal{T}_h
- \mathbf{n} the normal outward vector of an element K

Notations and definitions

Definitions

- Jump $\llbracket \cdot \rrbracket$ of a vector \mathbf{u} for F :

$$\llbracket \mathbf{u} \rrbracket = \mathbf{u}^+ \cdot \mathbf{n}^+ + \mathbf{u}^- \cdot \mathbf{n}^- = \mathbf{u}^+ \cdot \mathbf{n}^+ - \mathbf{u}^- \cdot \mathbf{n}^+$$

- Jump of a tensor $\underline{\underline{\sigma}}$ for F :

$$\llbracket \underline{\underline{\sigma}} \rrbracket = \underline{\underline{\sigma}}^+ \mathbf{n}^+ + \underline{\underline{\sigma}}^- \mathbf{n}^- = \underline{\underline{\sigma}}^+ \mathbf{n}^+ - \underline{\underline{\sigma}}^- \mathbf{n}^+$$

Notations and definitions

Definitions

- Average $\{\cdot\}$ of a variable u , for F :

$$\{u\} = \frac{u^+ + u^-}{2}$$

DG formulation of the original equation

Local DG formulation

$$i\omega \mathbf{Q} + \mathbf{A}_x \frac{\partial \mathbf{Q}}{\partial x} + \mathbf{A}_z \frac{\partial \mathbf{Q}}{\partial z} = 0$$

DG formulation of the original equation

Local DG formulation

$$i\omega \mathbf{Q} \varphi + \mathbf{A}_x \frac{\partial \mathbf{Q}}{\partial x} \varphi + \mathbf{A}_z \frac{\partial \mathbf{Q}}{\partial z} \varphi = 0$$

DG formulation of the original equation

Local DG formulation

$$\int_K i\omega \mathbf{Q}^K \varphi - \int_K \mathbf{A}_x^K \frac{\partial \mathbf{Q}^K}{\partial x} \varphi - \int_K \mathbf{A}_z^K \frac{\partial \mathbf{Q}^K}{\partial z} \varphi = 0$$

DG formulation of the original equation

Local DG formulation

$$\int_K i\omega \mathbf{Q}^K \varphi - \int_K \mathbf{A}_x^K \mathbf{Q}^K \frac{\partial \varphi}{\partial x} - \int_K \mathbf{A}_z^K \frac{\partial \varphi}{\partial z} + \sum_{F \in \mathcal{F}(K)} \int_F \mathbf{D}_n \mathbf{Q} \varphi = 0$$

$$\mathbf{D}_n = n_x \mathbf{A}_x + n_z \mathbf{A}_z = - \begin{pmatrix} 0 & 0 & \frac{n_x}{\rho} & 0 & \frac{n_z}{\rho} \\ 0 & 0 & 0 & \frac{n_z}{n_x} & \frac{\rho}{n_x} \\ n_x(\lambda + 2\mu) & n_z\lambda & 0 & 0 & 0 \\ n_x\lambda & n_z(\lambda + 2\mu) & 0 & 0 & 0 \\ n_z\mu & n_x\mu & 0 & 0 & 0 \end{pmatrix}$$

DG formulation of the original equation

Global DG formulation

$$\begin{aligned} \sum_{K \in \mathcal{T}_h} \int_K i\omega \mathbf{Q} \varphi - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_x \mathbf{Q} \frac{\partial \varphi}{\partial x} - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_z \mathbf{Q} \frac{\partial \varphi}{\partial z} \\ + \sum_{F \in \mathcal{F}_h} \int_F [\mathbf{D}_n \mathbf{Q} \varphi] = 0 \end{aligned}$$

DG formulation of the original equation

Global DG formulation

$$\sum_{K \in \mathcal{T}_h} \int_K i\omega \mathbf{Q} \varphi - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_x \mathbf{Q} \frac{\partial \varphi}{\partial x} - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_z \mathbf{Q} \frac{\partial \varphi}{\partial z} + \sum_{F \in \mathcal{F}_h} \int_F [\![\mathbf{D}_n \mathbf{Q} \varphi]\!] = 0$$

$$[\![\mathbf{D}_n \mathbf{Q} \varphi]\!] \simeq (\mathbf{D}_n \mathbf{Q}) [\![\varphi]\!]$$

DG formulation of the original equation

Global DG formulation

$$\sum_{K \in \mathcal{T}_h} \int_K i\omega \mathbf{Q} \varphi - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_x \mathbf{Q} \frac{\partial \varphi}{\partial x} - \sum_{K \in \mathcal{T}_h} \int_K \mathbf{A}_z \mathbf{Q} \frac{\partial \varphi}{\partial z} + \sum_{F \in \mathcal{F}_h} \int_F (\mathbf{D}_n \mathbf{Q}) [\![\varphi]\!] = 0$$

Centered flux DG scheme

Centered flux on a face F

$$(\mathbf{D}_n \mathbf{Q})|_F = \{\mathbf{D}_n \mathbf{Q}\} = \frac{1}{2} \left(\mathbf{D}_n^K \mathbf{Q}^K + \mathbf{D}_n^{K'} \mathbf{Q}^{K'} \right)$$

Centered flux DG scheme

$$\begin{aligned} & \int_K i\omega \mathbf{Q}^K \varphi - \int_K \mathbf{A}_x^K \mathbf{Q}^K \frac{\partial \varphi}{\partial x} - \int_K \mathbf{A}_z^K \mathbf{Q}^K \frac{\partial \varphi}{\partial z} \\ & + \sum_F \int_F \frac{1}{2} \left(\mathbf{D}_n^K \mathbf{Q}^K + \mathbf{D}_n^{K'} \mathbf{Q}^{K'} \right) \varphi = 0 \end{aligned}$$

Upwind flux DG scheme

Definition

$$\begin{cases} \mathbf{D}_n^+ = \mathbf{R}_n \Gamma^+ (\mathbf{R}_n)^{-1} \\ \mathbf{D}_n^- = \mathbf{R}_n \Gamma^- (\mathbf{R}_n)^{-1} \end{cases}$$

where

$$\Gamma^- = - \begin{pmatrix} v_p & 0 & 0 & 0 & 0 \\ 0 & v_s & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \end{pmatrix}, \quad \Gamma^+ = \begin{pmatrix} 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & v_s & 0 \\ 0 & 0 & 0 & 0 & v_p \end{pmatrix}$$

Upwind flux DG scheme

Definition

$$\begin{cases} \mathbf{D}_n^+ = \mathbf{R}_n \Gamma^+ (\mathbf{R}_n)^{-1} \\ \mathbf{D}_n^- = \mathbf{R}_n \Gamma^- (\mathbf{R}_n)^{-1} \end{cases}$$

and

$$\mathbf{R}_n = \begin{pmatrix} n_x v_p & -n_z v_s & 0 & n_z v_s & -n_x v_p \\ n_z v_p & n_x v_s & 0 & -n_x v_s & -n_z v_p \\ \lambda + 2n_x^2\mu & -2n_z n_x \mu & n_z^2 & -2n_z n_x \mu & \lambda + 2n_x^2\mu \\ \lambda + 2n_z^2\mu & 2n_z n_x \mu & n_x^2 & 2n_z n_x \mu & \lambda + 2n_z^2\mu \\ 2n_z n_x \mu & \mu(n_x^2 - n_z^2) & -n_x n_z & \mu(n_x^2 - n_z^2) & 2n_z n_x \mu \end{pmatrix}$$

Upwind flux DG scheme

Upwind flux on a face F

$$(\mathbf{D}_n \mathbf{Q})|_F = (\mathbf{D}_n^K)^+ \mathbf{Q}^K + (\mathbf{D}_n^{K'})^- \mathbf{Q}^{K'}$$

Upwind flux DG scheme

$$\begin{aligned} & \int_K i\omega \mathbf{Q}^K \varphi - \int_K \mathbf{A}_x^K \mathbf{Q}^K \frac{\partial \varphi}{\partial x} - \int_K \mathbf{A}_z^K \mathbf{Q}^K \frac{\partial \varphi}{\partial z} \\ & + \sum_F \int_F \left[(\mathbf{D}_n^K)^+ \mathbf{Q}^K + (\mathbf{D}_n^{K'})^- \mathbf{Q}^{K'} \right] \varphi = 0 \end{aligned}$$

- 4 Conclusion-Perspectives

Conclusion-Perspectives

Conclusion

- Upwind flux DG formulation gives better results on coarse meshes or for high frequencies than centered flux DG formulation
- With the upwind flux DG formulation we obtain one convergence order more than the centered flux DG formulation

Perspectives

- Develop 3D upwind flux DG formulation for Helmholtz equations
- Adapt the program for parallel computing

Conclusion-Perspectives

Conclusion

- Upwind flux DG formulation gives better results on coarse meshes or for high frequencies than centered flux DG formulation
- With the upwind flux DG formulation we obtain one convergence order more than the centered flux DG formulation

Perspectives

- Develop 3D upwind flux DG formulation for Helmholtz equations
- Adapt the program for parallel computing

Perspectives

Drawback

- Linear system with 5 unknowns to store

Perspectives

- Use of the upwind flux DG formulation as a reference method
- Compare upwind DG formulation with hybridizable DG formulation
- Construction of a HDG formulation
- Develop other linear solvers for sparse matrices (in collaboration with INRIA team, *Hiepacs*)
