HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

IN A PREVIOUS MODELING STUDY, LEBLOIS ET AL. (2006) DEMONSTRATED AN ACTION SELECTION MECHANISM IN CORTICO-BASAL GANGLIA LOOPS BASED ON COMPETITION BETWEEN THE POSITIVE FEEDBACK, DIRECT PATHWAY THROUGH THE STRIATUM AND THE NEGATIVE FEEDBACK, HYPERDIRECT PATHWAY THROUGH THE SUBTHALAMIC NUCLEUS.

IN GUTHRIE ET AL. (2013), AUTHORS INVESTIGATED HOW MULTIPLE LEVEL ACTION SELECTION COULD BE PERFORMED BY THE BASAL GANGLIA. TO DO THIS, THE MODEL IS EXTENDED IN A MANNER CONSISTENT WITH KNOWN ANATOMY AND ELECTRO-PHYSIOLOGY IN THREE MAIN AREAS. FIRST, TWO-LEVEL DECISION MAKING HAS BEEN INCORPORATED, WITH A COGNITIVE LEVEL SELECTING BASED ON CUE SHAPE AND A MOTOR LEVEL SELECTING BASED ON CUE POSITION. WE SHOW THAT THE DECISION MADE AT THE COGNITIVE LEVEL CAN BE USED TO BIAS THE DECISION AT THE MOTOR LEVEL. WE THEN DEMONSTRATE THAT, FOR ACCURATE TRANSMISSION OF INFORMATION BETWEEN DECISION-MAKING LEVELS, LOW EXCITABILITY OF STRIATAL PROJECTION NEURONS IS NECESSARY, A GENERALLY OBSERVED ELECTROPHYSIOLOGICAL FINDING. SECOND, INSTEAD OF PROVIDING A BIASING SIGNAL BETWEEN CUE CHOICES AS AN EXTERNAL INPUT TO THE NETWORK, WE SHOW THAT THE ACTION SELECTION PROCESS CAN BE DRIVEN BY REASONABLE LEVELS OF NOISE. FINALLY, WE INCORPORATE DOPAMINE MODULATED LEARNING AT CORTICOSTRIATAL SYNAPSES. AS LEARNING PROGRESSES, THE ACTION SELECTION BECOMES BASED ON LEARNED VISUAL CUE VALUES AND IS NOT INTERFERED WITH BY THE NOISE THAT WAS NECESSARY BEFORE LEARNING.

HOWEVER, THE MODEL WAS NOT REPRODUCIBLE FROM THE ARTICLE DESCRIPTION ...

IF REPRODUCIBILITY IS THE HALLMARK OF SCIENCE, NON-REPRODUCIBILITY SEEMS TO BE THE HALLMARK OF COMPUTATIONAL NEUROSCIENCES. GUTHRIE ET AL. (2013) IS A PROTOTYPIC CASE OF SUCH NON-REPRODUCIBLE COMPUTATIONAL NEUROSCIENCE RESEARCH EVEN THOUGH THE PROPOSED MODEL GIVES A FAIR ACCOUNT OF DECISION MAKING IN THE BASAL GANGLIA COMPLEX.

WHILE TRYING TO REPLICATE RESULTS STARTING FROM THE ARTICLE DESCRIPTION, WE SOON REALIZED SOME INFORMATION WERE UNDISCLOSED, SOME OTHER WERE AMBIGUOUS AND THERE WERE ALSO SOME FACTUAL ERRORS. EVEN AFTER ACCESSING THE ORIGINAL SOURCES (GOOD LINES OF PASCAL), WE WERE STILL UNABLE TO UNDERSTAND HOW THE MODEL WORKED. IN THE END, ONLY THE ORIGINAL MATERIAL (A WINDOWS EXECUTABLE) ALLOWED US TO ACCESS THE MISSING INFORMATION AND AFTER TWO MONTHS OF INTENSIVE REFACTORING, WE WERE FINALLY ABLE TO REPLICATE RESULTS USING ONLY 200 LINES OF PYTHON.

UNFORTUNATELY, SUCH LOOSE DESCRIPTION IS NOT AN ISOLATED CASE !!!

EXPERIMENT

DANA IS A PYTHON FRAMEWORK FOR DISTRIBUTED, ASYNCHRONOUS, NUMERICAL AND ADAPTIVE COMPUTING. THE COMPUTATIONAL PARADIGM SUPPORTING THE DANA FRAMEWORK IS GROUNDED ON THE NOTION OF A UNIT THAT IS A ESSENTIALLY A SET OF ARBITRARY VALUES THAT CAN VARY ALONG TIME UNDER THE INFLUENCE OF OTHER UNITS AND LEARNING. EACH UNIT CAN BE CONNECTED TO ANY OTHER UNIT (INCLUDING ITSELF) USING A WEIGHTED LINK AND A GROUP IS A STRUCTURED SET OF SUCH HOMOGENEOUS UNITS.
