HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Improvement of the assembly of heterozygous genomes of non-model organisms, a case study of the genomes of two *Spodoptera frugiperda* host strains

³CEA Genoscope, Evry, France

⁴ INRA, Diversité, Génomes et Interaction Micro-organismes (DGIMI), Montpellier France

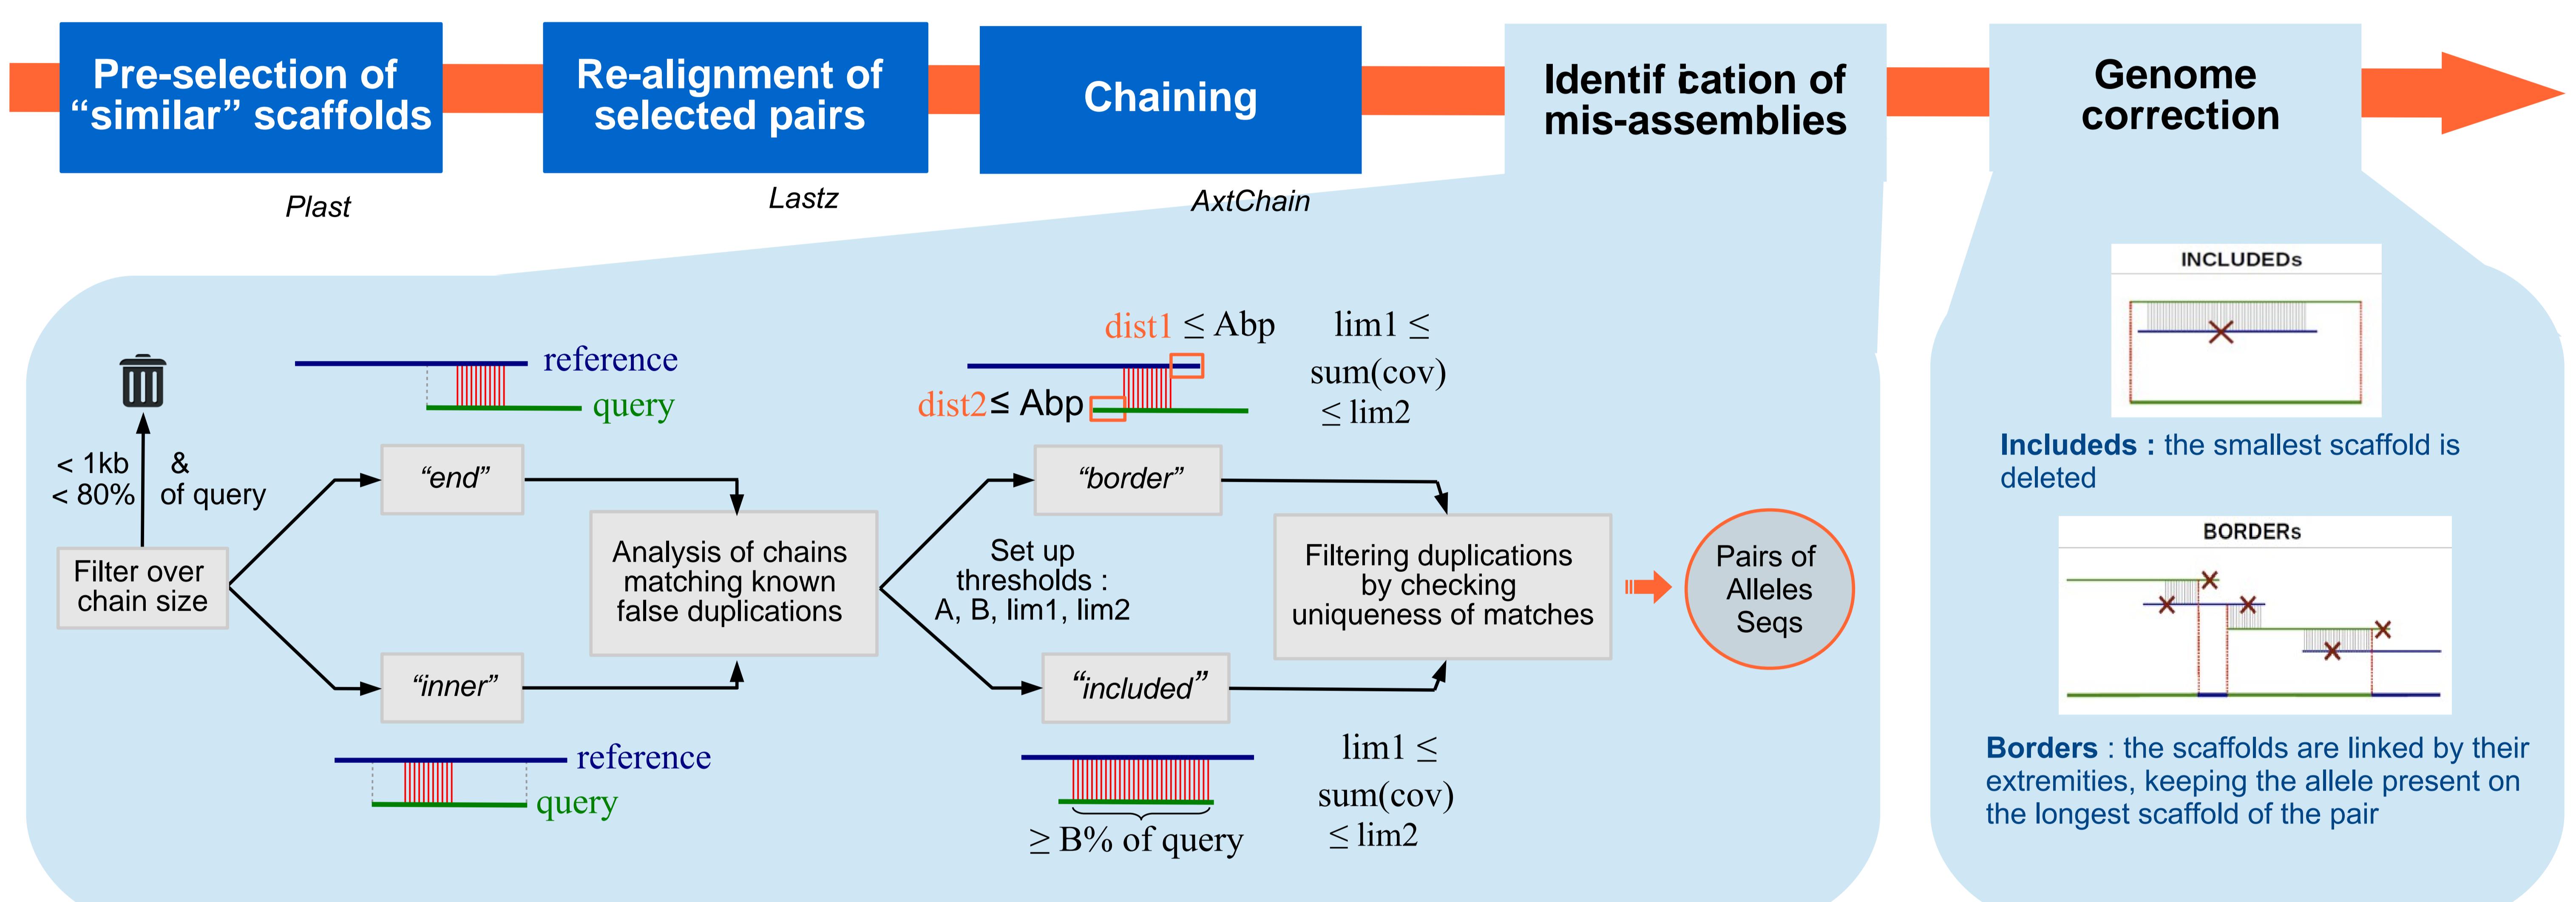

Motivation : Some heterozygous regions have a significant divergence between the two haplotypes and the assembly process can lead to the construction of two different contigs, instead of one consensus sequence.

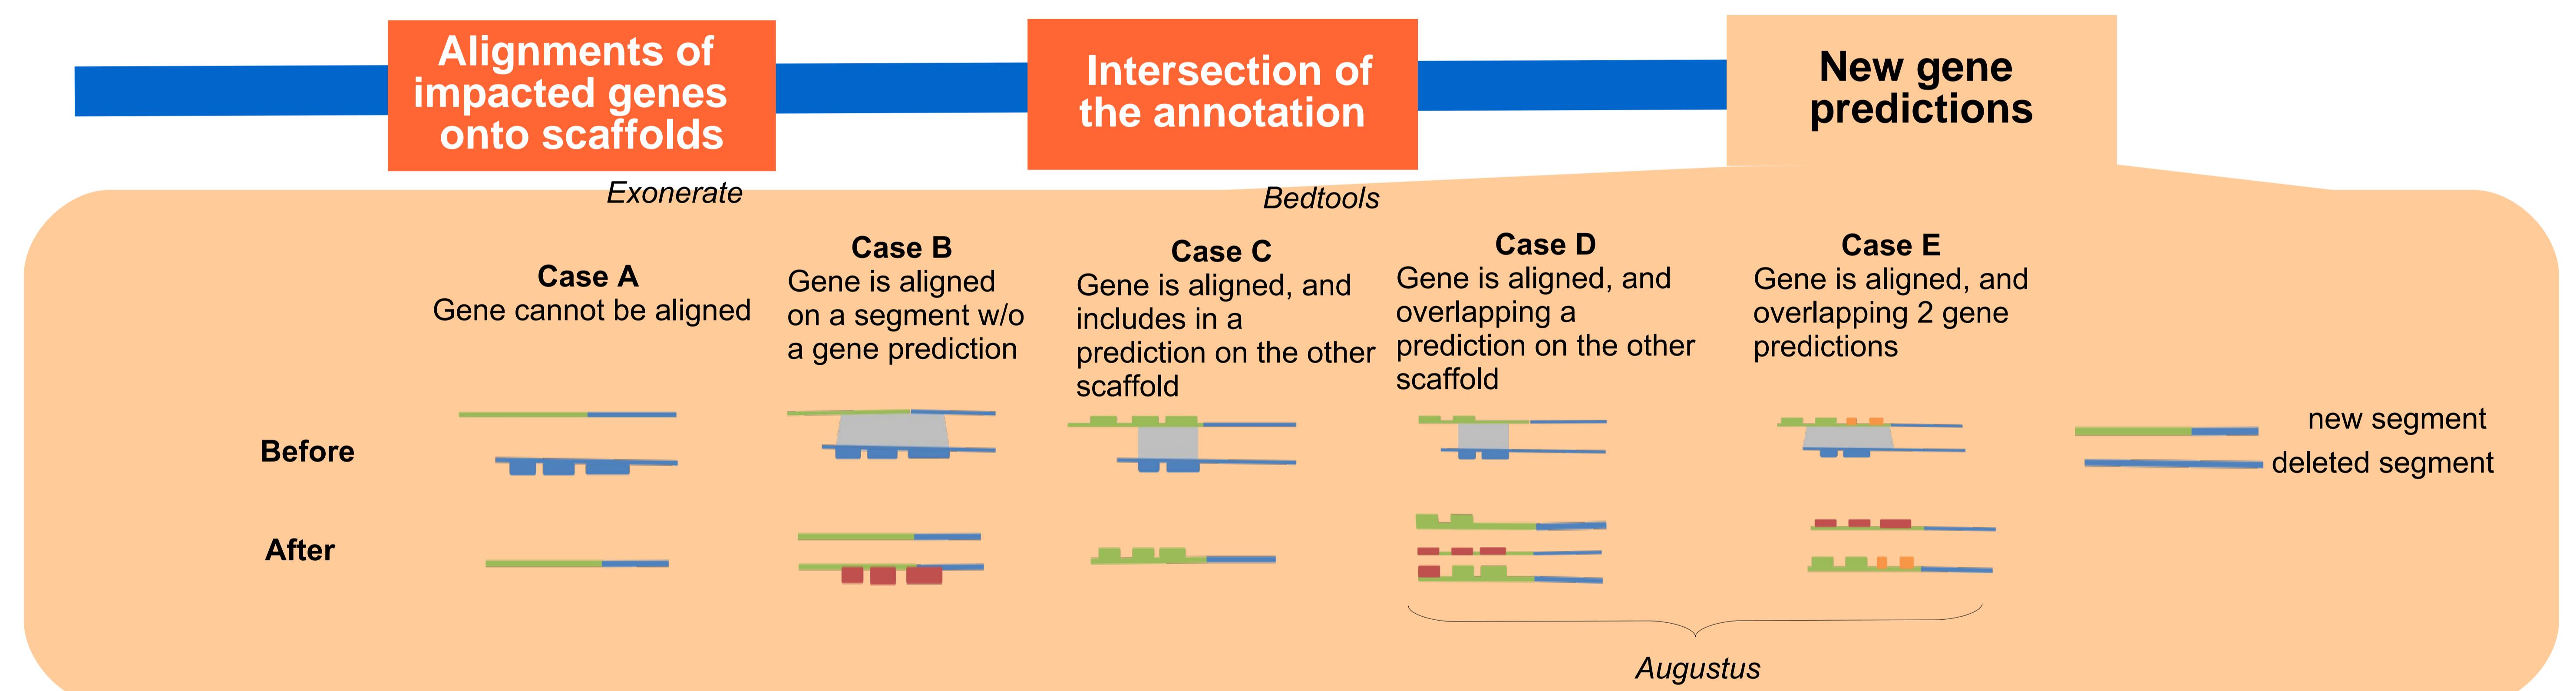

Objective : Set up a strategy to detect and correct false duplications in already-built assemblies.

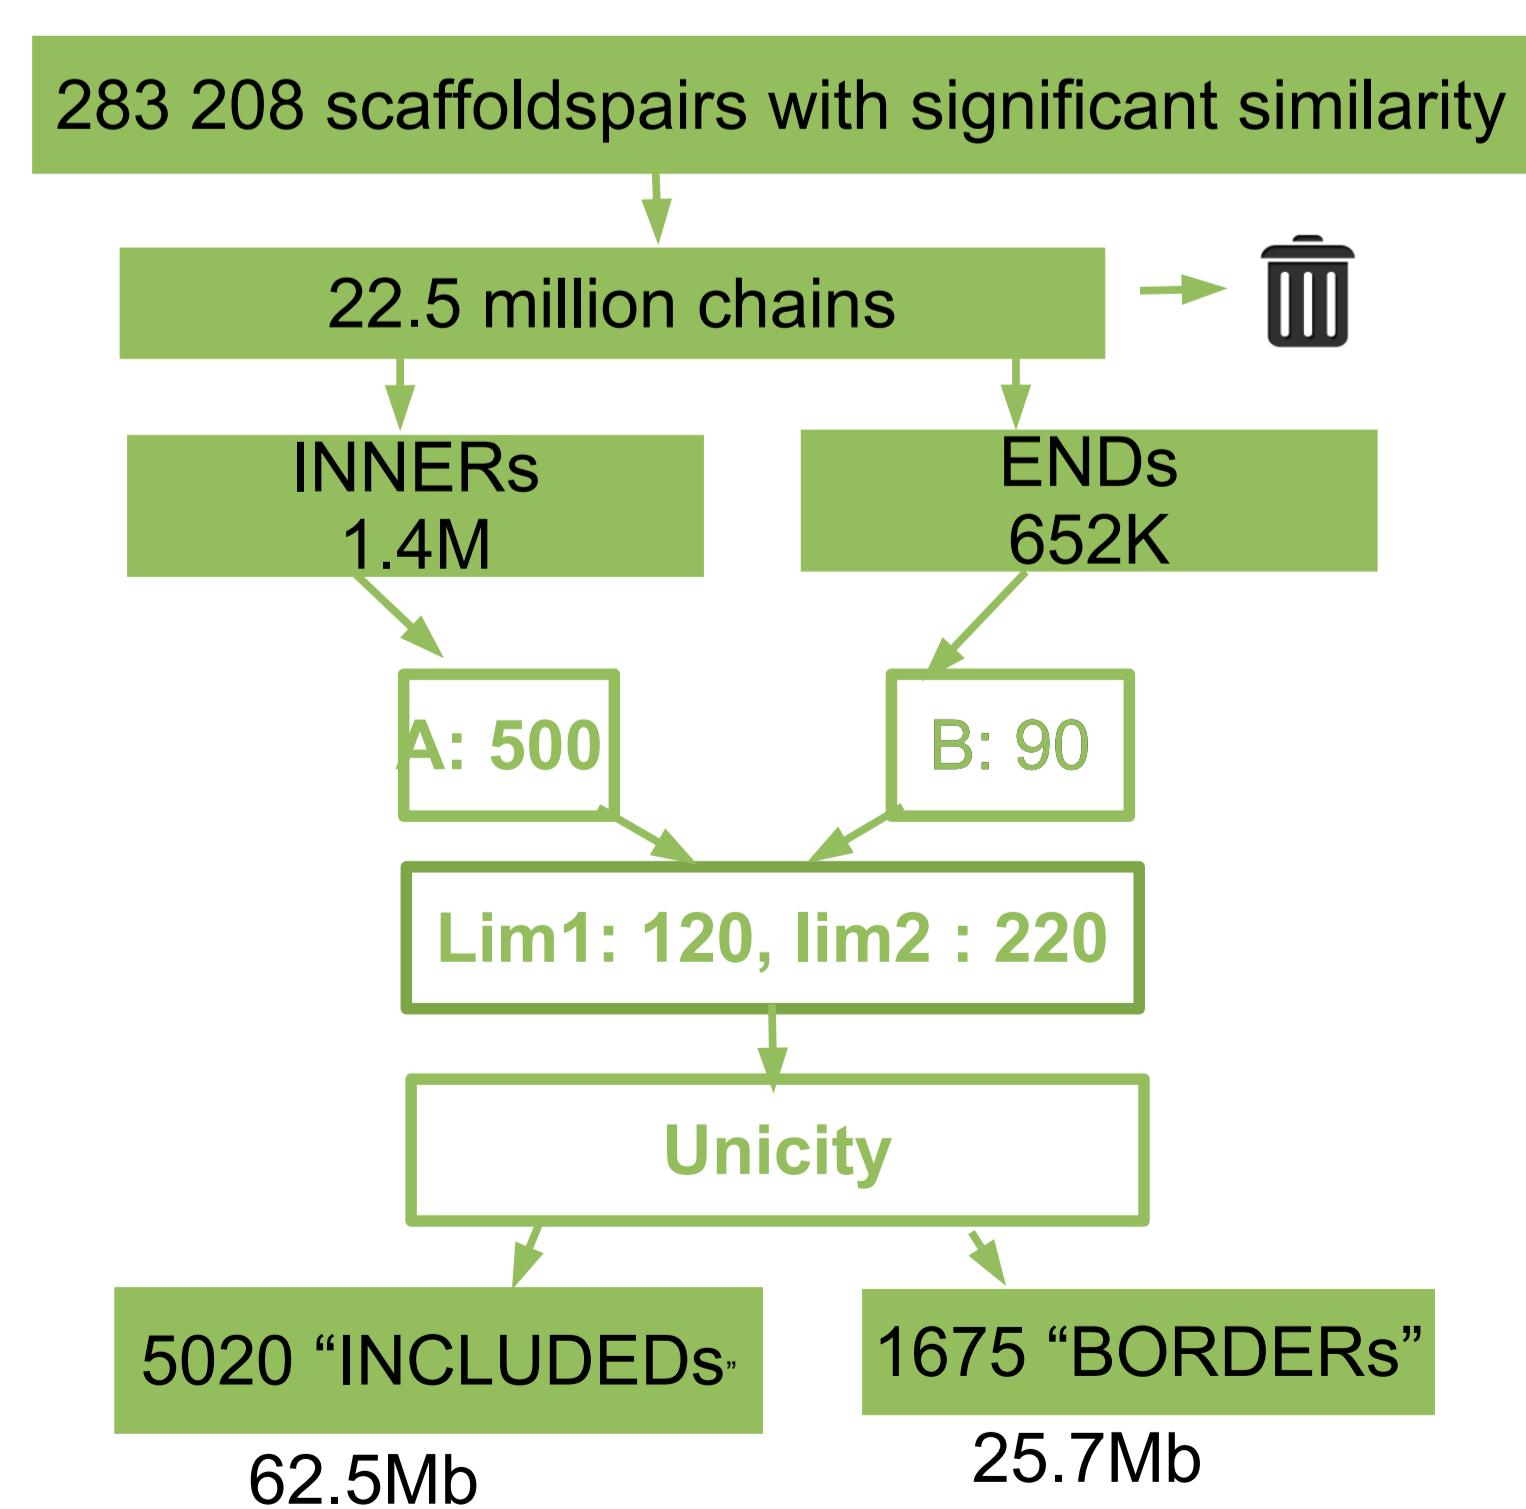

RE-ASSEMBLY

RE-ANNOTATION

APPLICATION : *Spodoptera frugiperda* genomes

BUSCO* stats	Initial assembly Allpaths			Platanus assembly			Corrected assembly			
	Total size (Mb)	Nb. scaffolds	N50 (bp)	Total Gap length	No hit	Single hit	Multi hit	Total size (Mb)	Nb. scaffolds	N50 (bp)
	526.0	48 272	39 593	13.6 Mb	14	1497	782	437.9	41 577	52 781

Annotation stats

Previous release : 25,041 genes		
3 746 genes to remap		
	# genes	% success
Case A	34	0
Case B	747	45.4%
Case C	643	100.0%
Case D/E	2322	86.3%

New release : 21,578 genes

Comparison of 2 Spodoptera strains: the genome of the *Spodoptera frugiperda* "rice variant" has been sequenced and assembled with *Platanus*, and annotated with the help of *Marker*. The comparison of the two draft sequences leads to the identification of about 16,000 pairs of orthologous genes, and thousands of segmental rearrangements (deletions, duplications or inversions).
