IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIPWorld Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is about information processing may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

Preface

Every 2 years, the International Federation for Information Processing Technical Committee 7 (IFIP TC 7)—System Modeling and Optimization—arranges highly regarded conferences on several topics of Applied Optimization, such as Optimal Control of Ordinary and Partial Differential Equations, Modeling and Simulation, Inverse Problems, Nonlinear, Discrete, and Stochastic Optimization, as well as Industrial Applications.

The collection in your hands contains selected papers presented at the 26th IFIP TC 7 Conference held at the Alpen-Adria-Universität Klagenfurt, Austria during September 8–13, 2013,

<http://ifip2013.uni-klu.ac.at>

The conference was organized by the local Institute of Mathematics. Preceding conferences in this series were held in Berlin, Germany (2011), Buenos Aires, Argentina (2009), Cracow, Poland (2007), and Turin, Italy (2005). The scientific program of the 2013 event consisted of 10 plenary talks, 33 minisymposia (from 4–12 invited talks each), and 5 contributed sessions. In total, this resulted in 235 talks. Altogether 268 participants from 32 countries came to the conference, the largest groups with respect to country of origin were Germany (80), Austria (66), Poland (21), France (15), UK (11), USA (11), Romania (10), Russia (10), Italy (8), Belgium (5), and the Czech Republic (5).

The 34 refereed contributions to these proceedings cover the latest progress in a wide range of topics discussed at the meeting.

Acknowledgments: We are grateful to the sponsors, namely the European Science Foundation (ESF), Europäisches Patentamt, Die Kärntner Sparkasse, the Land Kärnten, and the city of Klagenfurt.

Finally, we would like to thank our referees.
