HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A reconstruction of
Peters's table of
logarithms to 6 places

Introduction

Johann Theodor Peters (1869–1941) was a German astronomer and computer of mathematical and astronomical tables. In 1910 and 1911, together with Julius Bauschinger, he published the first widely available 8-place table of logarithms [15]. This work was the basis of many later tables, most of which have been reconstructed by us.¹

The 8-place table was itself based on a 12-place manuscript table, which was again used by Peters in the preparation of a new 7-place table of logarithms of trigonometrical functions for every second of the quadrant and published in 1911 [36].

In 1919, Peters published a table of the logarithms of the trigonometrical functions to 10 places for every thousandth of a degree [42]. This table was based on another 12-place table extracted from Briggs's table [17].

The 12-place table was in turn used as a basis for two new tables, the present 6-place table, and another one giving the logarithms to seven places [44], both published in 1921, and with an identical layout. Both tables give the logarithms at $0^\circ.001$ intervals. The rounded values had to be recomputed in a few instances.

The main purpose of this new 6-place table was to provide a table with easy interpolation, as the interval between values is only $3.6''$, that is a thousandth of a degree.

Each page gives the four functions sine, cosine, tangent and cotangent for 51 consecutive angular values. The values of the auxiliary functions

$$S = \log \left(\frac{\sin x}{x} \right) + 10 \tag{1}$$

$$T = \log \left(\frac{\tan x}{x} \right) + 10 \tag{2}$$

are given from 0° to $0^\circ.4$, x being in degrees. Differences and interpolation tables are given in certain ranges.

The volume ends with an extensive summary of trigonometric formulæ, as well as methods for solving equations, tables of mathematical and geodetical constants, and a table for the conversion of fractions of degrees into sexagesimal minutes and seconds. These tables have not (yet) been reproduced in our reconstruction. They were reused in Peters's last published volume in 1941 [57].

¹For more information on Peters's tables, we refer the reader to our summary [90].

²**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
