HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A reconstruction of
Peters's six-place table
of trigonometric functions
(1929)

Introduction

Johann Theodor Peters (1869–1941) was a German astronomer and computer of mathematical and astronomical tables. In 1910 and 1911, together with Julius Bauschinger, he published the first widely available 8-place table of logarithms [15]. This work was the basis of many later tables, most of which have been reconstructed by us.¹

The table published by Peters in 1929 is a table of trigonometrical functions, following in the footsteps of the 7-place table published by him in 1918 [40].

The 7-place table had been obtained by interpolating the values in Briggs's table [17], but the new 6-place table is based on Andoyer's tables [3]. Andoyer gave the six functions every 10'' and to 15 places.

Peters's table is split in two parts. In the first part, the values of cot and csc are given for every second until 1°20'. In the second part, the values of the six trigonometrical functions are given every 10''. In addition, the values of $w'' \cdot \csc(w)$ and $w'' \cdot \cot(w)$, where w is the angle in seconds, are given from 0° to 1°20'.

This table has generally been well received, but one reviewer [95] regretted that in the first table the values of cot precede those of csc, whereas in the second table, they appear in the opposite order.

¹For more information on Peters's tables, we refer the reader to our summary [90].

References

The following list covers the most important references² related to Peters's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

²**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
