IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is about information processing may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly, National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

Preface

This volume comprises the 8th IFIP International Conference on Intelligent Information Processing. As the world proceeds quickly into the Information Age, it encounters both successes and challenges, and it is well recognized nowadays that intelligent information processing provides the key to the Information Age and to mastering many of these challenges. Intelligent information processing supports the most advanced productive tools that are said to be able to change human life and the world itself. However, the path is never a straight one and every new technology brings with it a spate of new research problems to be tackled by researchers; as a result we are not running out of topics; rather the demand is ever increasing. This conference provides a forum for engineers and scientists in academia, university, and industry to present their latest research findings in all aspects of intelligent information processing.

This is the 8th IFIP International Conference on Intelligent Information Processing. We received more than 70 papers, of which 32 papers are included in this program as regular papers and 3 as short papers. We are grateful for the dedicated work of both the authors and the referees, and we hope these proceedings will continue to bear fruit over the years to come. All papers submitted were reviewed by two referees.

A conference such as this cannot succeed without help from many individuals who contributed their valuable time and expertise. We want to express our sincere gratitude to the Program Committee members and referees, who invested many hours for reviews and deliberations. They provided detailed and constructive review reports that significantly improved the papers included in the program.

We are very grateful to have the sponsorship of the following organizations: IFIP TC12, Zhejiang University and Institute of Computing Technology, Chinese Academy of Sciences. Thanks to Dr. Xi Yang for carefully checking the Proceedings.

Finally, we hope you find this volume inspiring and informative. Enjoy your leisurely stay in Hangzhou, China.

Abstracts of Keynote Presentations

Challenges of Big Data in Scientific Discovery

Benjamin W. Wah

The Chinese University of Hong Kong
Shatin, Hong Kong
bwah@cuhk.edu.hk

Abstract. Big Data is emerging as one of the hottest multi-disciplinary research fields in recent years. Big data innovations are transforming science, engineering, medicine, healthcare, finance, business, and ultimately society itself. In this presentation, we examine the key properties of big data (volume, velocity, variety, and veracity) and their relation to some applications in science and engineering. To truly handle big data, new paradigm shifts (as advocated by the late Dr. Jim Gray) will be necessary. Successful applications in big data will require in situ methods to automatically extracting new knowledge from big data, without requiring the data to be centrally collected and maintained. Traditional theory on algorithmic complexity may no longer hold, since the scale of the data may be too large to be stored or accessed. To address the potential of big data in scientific discovery, challenges on data complexity, computational complexity, and system complexity will need to be solved. We illustrate these challenges by drawing on examples in various applications in science and engineering.

Neuromorphic Computing beyond von Neumann

Karlheinz Meier

Department of Physics and Astronomy
Universität Heidelberg
`meierk@kip.uni-heidelberg.de`

Abstract. The brain is characterized by extreme power efficiency, fault tolerance, compactness and the ability to develop and to learn. It can make predictions from noisy and unexpected input data. Any artificial system implementing all or some of those features is likely to have a large impact on the way we process information.

With the increasingly detailed data from neuroscience and the availability of advanced VLSI process nodes the dream of building physical models of neural circuits on a meaningful scale of complexity is coming closer to realization. Such models deviate strongly from classical processor-memory based numerical machines as the two functions merge into a massively parallel network of almost identical cells.

The lecture will introduce current projects worldwide and introduce the approach proposed by the EU Human Brain Project to establish a systematic path from biological data, simulations on supercomputers and systematic reduction of cell complexity to derived neuromorphic hardware implementations with a very high degree of configurability.

Ontology-Based Monitoring of Dynamic Systems

Franz Baader

Theoretical Computer Science
TU Dresden, Germany
`baader@tcs.inf.tu-dresden.de`

Abstract. Our understanding of the notion “dynamic system” is a rather broad one: such a system has states, which can change over time. Ontologies are used to describe the states of the system, possibly in an incomplete way. Monitoring is then concerned with deciding whether some run of the system or all of its runs satisfy a certain property, which can be expressed by a formula of an appropriate temporal logic.

We consider different instances of this broad framework, which can roughly be classified into two cases. In one instance, the system is assumed to be a black box, whose inner working is not known, but whose states can be (partially) observed during a run of the system. In the second instance, one has (partial) knowledge about the inner working of the system, which provides information on which runs of the system are possible. In this talk, we will review some of our recent research that investigates different instances of this general framework of ontology-based monitoring of dynamic systems.

Cyborg Intelligence: Towards the Convergence of Machine and Biological Intelligence

Zhaohui Wu

Zhejiang University
wzh@zju.edu.cn

Abstract. Recent advances in the multidisciplinary fields of brain-machine interfaces, artificial intelligence, computational neuroscience, microelectronics, and neurophysiology signal a growing convergence between machines and living beings. Brain-machine interfaces (BMIs) enable direct communication pathways between the brain and an external device, making it possible to connect organic and computing parts at the signal level. Cyborg means a biological-machine system consisting of both organic and computing components. Cyborg intelligence aims to deeply integrate machine intelligence with biological intelligence by connecting machines and living beings via BMIs, enhancing strengths and compensating for weaknesses by combining the biological cognition capability with the machine computational capability. This talk will introduce the concept, architectures, and applications of cyborg intelligence. It will also discuss issues and challenges.

EEG-Based Visual Brain-Computer Interfaces

Xiaorong Gao

Dept. of Biomedical Engineering
Tsinghua University
gxr-dea@tsinghua.edu.cn

Abstract. Over the past several decades, electroencephalogram (EEG) based brain-computer interfaces (BCIs) have attracted attention from researchers in the field of neuroscience, neural engineering, and clinical rehabilitation. While the performance of BCI systems has improved, they do not yet support widespread usage. Recently, visual BCI systems have become popular because of their high communication speeds, little user training, and low user variation. However, it remains a challenging problem to build robust and practical BCI systems from physiological and technical knowledge of neural modulation of visual brain responses. This talk will review the current state and future challenges of visual BCI systems. And the taxonomy based on the multiple access methods of telecommunication systems is described. Meanwhile, the challenges will be discussed, i.e., how to translate current technology into real-life practices. Specifically, useful guidelines are provided in this talk to help exploring new paradigms and methodologies to improve the current visual BCI technology.

Table of Contents

Machine Learning

Semi-paired Probabilistic Canonical Correlation Analysis	1
<i>Bo Zhang, Jie Hao, Gang Ma, Jinpeng Yue, and Zhongzhi Shi</i>	
Using Bat Algorithm with Levy Walk to Solve Directing Orbits of Chaotic Systems	11
<i>Xingjuan Cai, Lei Wang, Zhihua Cui, and Qi Kang</i>	
Complex Proteomes Analysis Using Label-Free Mass Spectrometry-Based Quantitative Approach Coupled with Biomedical Knowledge	20
<i>Chao Pan, Wenxian Peng, Huilong Duan, and Ning Deng</i>	

Data Mining

Online Migration Solver Based on Instructions Statistics: Algorithm for Deciding Offload Function Set on Mobile Cloud System	29
<i>Yuanren Song and Zhijun Li</i>	
Improved Hierarchical K-means Clustering Algorithm without Iteration Based on Distance Measurement	38
<i>Wenhua Liu, Yongquan Liang, Jiancong Fan, Zheng Feng, and Yuhao Cai</i>	
An Optimized Tag Recommender Algorithm in Folksonomy	47
<i>Jie Chen, Baohua Qiang, Yaoguang Wang, Peng Wang, and Jun Huang</i>	

Web Mining

Extracting Part-Whole Relations from Online Encyclopedia	57
<i>Fei Xia and Cungen Cao</i>	
Topic Detection and Evolution Analysis on Microblog	67
<i>Guoyong Cai, Libin Peng, and Yong Wang</i>	
A DBN-Based Classifying Approach to Discover the Internet Water Army	78
<i>Weiqiang Sun, Weizhong Zhao, Wenjia Niu, and Liang Chang</i>	
An Efficient Microblog Hot Topic Detection Algorithm Based on Two Stage Clustering	90
<i>Yuxin Sun, Huifang Ma, Meihuizi Jia, and Wang Peiqing</i>	

Collecting Valuable Information from Fast Text Streams	96
<i>Baoyuan Qi, Gang Ma, Zhongzhi Shi, and Wei Wang</i>	

Multi-agent Systems

An AUML State Machine Based Method for Multi-agent Systems Model Checking	106
<i>Dapeng Zhang, Xiang Ji, and Xinsheng Wang</i>	
Adaptive Mechanism Based on Shared Learning in Multi-agent System	113
<i>Qingshan Li, Hua Chu, Liang Diao, and Lu Wang</i>	
An Agent-Based Autonomous Management Approach to Dynamic Services	122
<i>Fu Hou, Xinjun Mao, Junwen Yin, and Wei Wu</i>	
Research and Application Analysis of Feature Binding Mechanism	133
<i>Youzhen Han and Shifei Ding</i>	

Automatic Reasoning

The Correspondence between Propositional Modal Logic with Axiom $\Box\phi \leftrightarrow \Diamond\phi$ and the Propositional Logic	141
<i>Meiying Sun, Shaobo Deng, and Yuefei Sui</i>	
A Sound and Complete Axiomatic System for Modality $\Box\phi \equiv \Box_1\phi \wedge \Box_2\phi$	152
<i>Shaobo Deng, Meiying Sun, Cungen Cao, and Yuefei Sui</i>	
Verification of Branch-Time Property Based on Dynamic Description Logic	161
<i>Yaoguang Wang, Liang Chang, Fengying Li, and Tianlong Gu</i>	
Dynamic Description Logic Based on DL-Lite	171
<i>Na Zhang, Liang Chang, Zhoubo Xu, and Tianlong Gu</i>	
Formalizing the Matrix Inversion Based on the Adjugate Matrix in HOL4	178
<i>Liming Li, Zhiping Shi, Yong Guan, Jie Zhang, and Hongxing Wei</i>	

Decision Algorithms

A Heuristic Approach to Acquisition of Minimum Decision Rule Sets in Decision Systems	187
<i>Zuqiang Meng, Liang Jiang, Hongyan Chang, and Yuansheng Zhang</i>	

Cooperative Decision Algorithm for Time Critical Assignment without Explicit Communication	197
<i>Yulin Zhang, Yang Xu, and Haixiao Hu</i>	
Using PDDL to Solve Vehicle Routing Problems	207
<i>Wenjun Cheng and Yuhui Gao</i>	
Automated Localization and Accurate Segmentation of Optic Disc Based on Intensity within a Minimum Enclosing Circle	216
<i>Ping Jiang and Quansheng Dou</i>	

Multimedia

An Optimization Scheme for SVAC Audio Encoder	221
<i>Ruo Shu, Shibao Li, and Xin Pan</i>	
A Traffic Camera Calibration Method Based on Multi-rectangle: Calibrating a Camera Using Multi-rectangle Constructed by Mark Lines in Traffic Road	230
<i>Liyang Lu, Xiaobo Lu, Saiping Ji, and Chen Tong</i>	
A Multi-instance Multi-label Learning Framework of Image Retrieval ...	239
<i>Chaojun Wang, Zhixin Li, and Canlong Zhang</i>	
The Retrieval of Shoeprint Images Based on the Integral Histogram of the Gabor Transform Domain	249
<i>Xiangyang Li, Minhua Wu, and Zhiping Shi</i>	
Scene Classification Using Spatial and Color Features	259
<i>Peilong Zeng, Zhixin Li, and Canlong Zhang</i>	

Pattern Recognition

Multipath Convolutional-Recursive Neural Networks for Object Recognition	269
<i>Xiangyang Li, Shuqiang Jiang, Xinhang Song, Luis Herranz, and Zhiping Shi</i>	
Identification of Co-regulated Gene Network by Using Path Consistency Algorithm Based on Gene Ontology	278
<i>Hanshi Wang, Chenxiao Wang, Lizhen Liu, Chao Du, and Jingli Lu</i>	

Information Security

Case Retrieval for Network Security Emergency Response Based on Description Logic	284
<i>Fei Jiang, Tianlong Gu, Liang Chang, and Zhoubo Xu</i>	

On the Prevention of Invalid Route Injection Attack	294
<i>Meng Li, Quanliang Jing, Zhongjiang Yao, and Jingang Liu</i>	
A Formal Model for Attack Mutation Using Dynamic Description Logics	303
<i>Zhuxiao Wang, Jing Guo, Jin Shi, Hui He, Ying Zhang, Hui Peng, and Guanhua Tian</i>	
Efficient Integrity Protection for P2P Streaming	312
<i>Lingli Deng, Ziyao Xu, Wei Chen, Lu Lu, and Xiaodong Duan</i>	
Author Index	323
