HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
DATA ACQUISITION FOR ANALYTICAL PLATFORM
AUTOMATING SCIENTIFIC WORKFLOWS AND BUILDING AN OPEN DATABASE PLATFORM FOR CHEMICAL ANALYSIS METADATA

TARGET: The project DAAP “Data Acquisition for Analytical Platform” engages the collaboration in the Analytical Chemistry research community. The platform allows shared data among scientists by accessing private Linked Database Platform (LDP) or public Linked Database Platform. The first step is to reference the resources available to researchers using a wiki, to define the ontology by the domain scientists and to benefit from Linked Data technologies.

PERSPECTIVE: open data access, relevant information extraction, data fusion

Efficient knowledge production with the scientific community

Step 1: Protocols are described on the private wiki DAAP by the researcher.

Step 2: Experimental data is stored within the University server.

Step 3: A plugin extracts the metadata from experimental data, imports the metadata into the RDF database and links metadata to the domain ontology.

Step 4: Researchers can simultaneously query the data in the database according to the domain ontology and find the related experimental data.

Step 5: After publishing a paper, data and knowledge are available on the public wiki DAAP.

Step 6: Experts organize a meeting to review and validate the shared new knowledge and the shared resources according to the domain ontology.

Step 7: Researchers can query the domain ontology using Linked Data technologies.

Step 8: The ontology is presented as an infobox within wiki DAAP pages. In case of disagreement, users can change it. The divergence in ontology will then be discussed in step 6.
