IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the first World Computer Congress held in Paris the previous year. A federation for societies working in information processing, IFIP’s aim is two-fold: to support information processing in the countries of its members and to encourage technology transfer to developing nations. As its mission statement clearly states:

*IFIP is the global non-profit federation of societies of ICT professionals that aims at achieving a worldwide professional and socially responsible development and application of information and communication technologies.*

IFIP is a non-profit-making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees and working groups, which organize events and publications. IFIP’s events range from large international open conferences to working conferences and local seminars.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is generally smaller and occasionally by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

IFIP distinguishes three types of institutional membership: Country Representative Members, Members at Large, and Associate Members. The type of organization that can apply for membership is a wide variety and includes national or international societies of individual computer scientists/ICT professionals, associations or federations of such societies, government institutions/government related organizations, national or international research institutes or consortia, universities, academies of sciences, companies, national or international associations or federations of companies.

Advances in Production Management Systems

The Path to Intelligent, Collaborative and Sustainable Manufacturing

IFIP WG 5.7 International Conference, APMS 2017
Hamburg, Germany, September 3–7, 2017
Proceedings, Part I
Preface

We live in exciting times. The technological revolution in information and communication technology has been going on for several decades already and there seemingly is no near end in sight. The possibilities for industrial companies are enormous, but so are the challenges.

The globalized economy has done its fair share in reducing extreme poverty levels. The United Nations report that the target of reducing extreme poverty by half was met five years ahead of the 2015 deadline: more than 1 billion people have been lifted out of extreme poverty since 1990.

The environmental burden humankind puts onto our planet is becoming bigger and bigger, threatening eco-systems and our own well-being in the future. Industrial companies are affecting, and affected by, all three environments. In fact they contribute significantly both to poverty relief by employing hundreds of millions of people but also to the ecological challenges we are confronted with by exploiting natural reserves and by their emissions to the environment.

Thus, the question of how to find the path to intelligent, collaborative and sustainable manufacturing is of eminent importance.

We invited experts, academics, researchers, and industrial practitioners from around the world to the Advances in Production Management Systems Conference 2017 in Hamburg, Germany, to contribute with ideas, concepts and theories. A large international panel of experts reviewed all the papers and selected the best to be presented and to be included in these conference proceedings.

In this collection of papers, the authors share their perspectives as well as their concepts and solutions for the challenges industrial companies are confronted with and the great opportunities new technologies, collaboration and the developments described above offer.

The chapters are organized in two parts

- Smart Manufacturing (Volume 1)
- Collaborative and Sustainable Manufacturing (Volume 2)

We hope that our readers will discover valuable new ideas and insights.

The conference was supported by the International Federation of Information Processing and was organized by the IFIP Working Group 5.7 on Advances in Production Management Systems.

We would like to thank all contributors for their research and for their willingness to share ideas and results. We are also indebted to the members of the IFIP Working Group 5.7 for their support in the review of the papers.

Sustainability Strategies in Industrial Practice .......................................................... 358
   Silje Helene Aschehoug and Kjersti Øverbø Schulte

Introducing Buffer Management in a Manufacturing Planning and Control Framework .......................................................... 366
   Lisa Hedvall, Joakim Wikner, and Per Hilletofth

Bottleneck Prediction Using the Active Period Method in Combination with Buffer Inventories .......................................................... 374
   Christoph Roser, Kai Lorentzen, David Lenze, Jochen Deuse, Ferdinand Klenner, Ralph Richter, Jacqueline Schmitt, and Peter Willats

Relationship Between Variants and Inventory Under Consideration of the Replenishment Time .......................................................... 382
   Christoph Roser, Hauke Meier, and Masaru Nakano

Health Impact of Electric Vehicles Considering Environmental Leakage. The Case Study on Japan, China, UK and Poland .......................................................... 390
   Kamila Romejko and Masaru Nakano

A Multi-agent Approach to Implement a Reverse Production Virtual Market in Green Supply Chains .......................................................... 399
   Adriana Giret and Miguel A. Salido

Eco-Efficiency in Manufacturing Operations

Product Circularity Assessment Methodology .......................................................... 411
   Cecilia Maria Angioletti, Mélanie Despeisse, and Roberto Rocca

Teaching Energy Efficiency in Manufacturing Using Gamification: A Case Study .......................................................... 419
   Mélanie Despeisse and Peter Lunt

Organizational Designs for Sharing Environmental Best Practice Between Manufacturing Sites .......................................................... 427
   Lampros Litos, Peter Lunt, Wen Liu, and Steve Evans

Simulation-Supported Verification of Methods for Controlling Disassembly Lines .......................................................... 435
   Jan Hrdina and Gert Zülch

A Novel Knowledge Repository to Support Industrial Symbiosis .......................................................... 443
   Miriam Benedetti, Maria Holgado, and Steve Evans

Ecological Footprint in the Cotton Supply Chain: The Consumers’ View .......................................................... 452
   Solimar Garcia, Alexandra Cordeiro, Fernando Gorni Neto, and Irenilza de Alencar Nääs
Green Distribution – A Comparative Study of Sea and Road Transport Modes for a Norwegian Manufacturing Company .......................... 460 Espen Rød and Mikhail Shlopak

From SCM to Eco-Industrial Park Management: Modelling Eco-Industrial Park’s Symbiosis with the SCOR Model .............................. 467 Mathilde Le Tellier, Lamia Berrah, Benoit Stutz, Simon Barnabé, and Jean-François Audy

An Integrated Supply Chain Model with Excess Heat Recovery ............ 479 Beatrice Marchi, Simone Zanoni, and Lucio Enrico Zavanella

Environmental KPI Selection Using Criteria Value and Demonstration. ..... 488 Deogratias Kibira and Shaw Feng

Author Index .................................................................................................. 505
