HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Make your Arts and Humanities research go standard. TEI inside !

STANDARDIZATION SURVIVAL KIT

Guidelines and tools are easier to understand and use when presented through examples. The SSK provides a variety of standardized resources in a meaningful context, delivered by research use cases : the « scenarios ».

FULL TEI

TEI is the SSK underlying data model, designed to maximize scenario reuse and customization. The data are available on a GitHub repository : <https://github.com/ParthenosWP4/SSK>

REPURPOSING EVENTS

A research use case scenario, which is a combination of intellectual and concrete actions forming a methodological sequence, can be represented as a series of events.

MAXIMIZING REUSE

The scenarios and the steps are represented in separate documents connected by pointers, allowing steps to be easily reused in several scenarios.

ORGANIZING REFERENCES

Inside events, bibliographic resources are referenced in `<ref>` elements, put together in a `<linkGrp>`, pointing to a Zotero database.

CUSTOMIZABLE BY NATURE

ODD customization techniques can be applied using the `@mode` attribute, which is available for all the content elements of scenarios and steps.

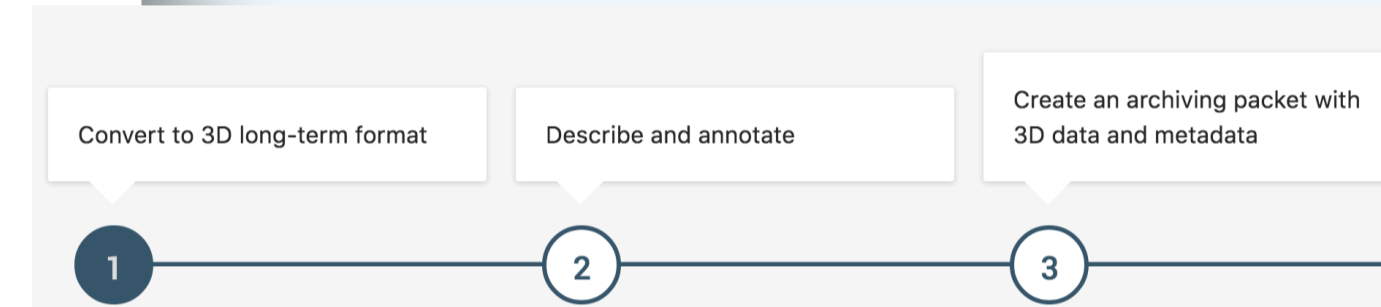

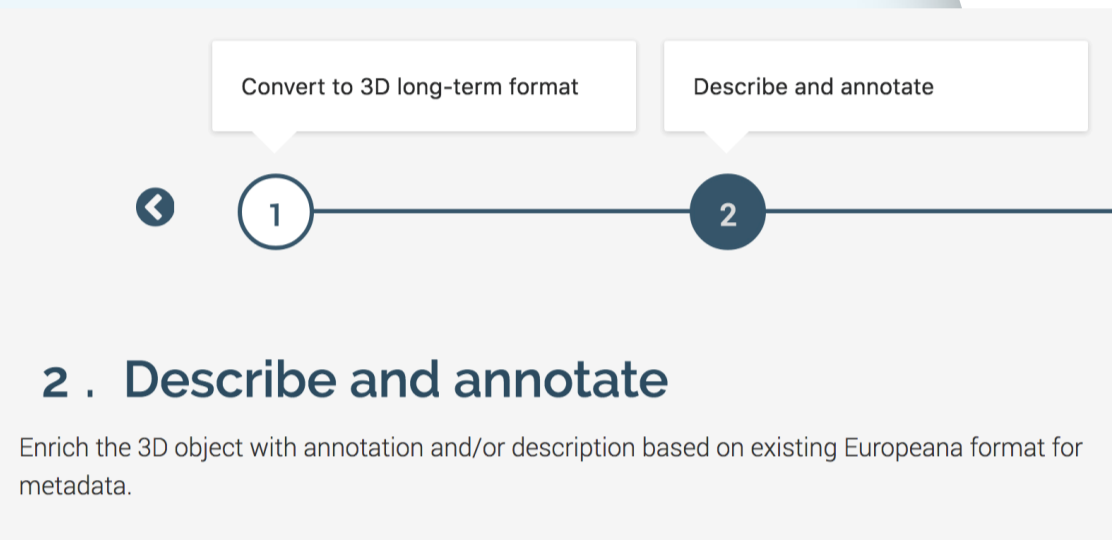

FUTURE DEVELOPMENT : IMPLEMENTING TBX IN TEI

Scenarios, steps and resources are qualified by keywords, taken from selected terminologies (like TaDiRAH). We plan to use the new implementation of TBX in TEI to describe such terminologies.
