HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A reconstruction of
Crelle's table of primes
I: Manuscript table
(1842)

Denis Roegel

2 May 2012

August Leopold Crelle (1780–1855) was a German mathematician and construction engineer. He was self trained and was granted a doctorate in mathematics for a thesis submitted in 1815. He was also the architect of the first railway line in Prussia in 1838. He is now most famous for having founded the *Journal für die reine und angewandte Mathematik* in 1826, but he also published several mathematical treatises and textbooks, as well as works on railway engineering and railway economics. Among other things, he also published several mathematical tables, which are the subject of interest here.

Figure 1: August Leopold Crelle (1780–1855) (source: Wikipedia)

Figure 2: The street named after Crelle in Berlin. (Photograph by the author, 2012)

1 Crelle's first tables

Crelle's first large tables were his *Rechentafeln* [7] published in 1820. They were a major step forward in the development of extended multiplication tables. Apart from Herwart's table, this was the first widely distributed table giving products up to 1000×1000 .

Then in 1836, Crelle published his *Erleichterungstafel* ("simplification table") [8], which gave the products of all numbers up to 10 millions by 2, 3, . . . , 9.

2 Crelle's tables of factors and primes (ca. 1830–1840)

It was probably in the years 1830–1840 that Crelle worked on factor tables and completed the list of factors of the numbers of the fourth, fifth and sixth millions, after Burckhardt's initial work on the first three millions [4]. Indeed the *Abhandlungen* of the Academy of sciences in Berlin for 1833 mention that Crelle obtained during that year a support of 300 *Reichsthaler* for the computation of the primes in the fourth million.¹

Crelle's tables were certainly completed before 1842, since an excerpt giving the primes in the first six millions is kept at the Berlin Academy of Sciences and is dated 1842 [9]. This volume is of approximate size 43 cm \times 34 cm and contains 596 pages, of which only the 298 recto sides have been completed. Each page is a preprinted form which has been filled by hand. At the beginning of the table, the first page of a projected printed version is inserted. This page covers the interval from 1 to 10000.

The tables of factors were deposited in the Archives of the Academy of sciences in Berlin, but we were unable to find them.² They may still be located within other archives, or they have been lost. Another possibility is that they were at some time borrowed and not returned.

All that we know of Crelle's tables of factors is that they were said to be too inaccurate to publish, but we can not conclude on this matter. Eventually, in 1855, Crelle described other methods for computing factor tables [10].

Plans to publish the table of factors seem to go back at least to 1842. Indeed, in a letter written by Gauss to Heinrich Christian Schumacher on 25 January 1842, Gauss expressed the wish that "a table of factors from 3000000 to 6000000, whose computation was led by Crelle and of which he gave the manuscript to the Academy of Berlin, will be printed" [23, p. 53–55]. Gauss writes that Crelle had been in Göttingen six months earlier, but that Gauss forgot to raise this matter with him. Gauss then asked if Schumacher could relay this wish to Berlin.

A few years later, on 23 November 1847, Carl Gustav Jacobi wrote to Peter Andreas Hansen about some calculation work which might be given to Dase and added that "tables of factors for the fourth, fifth, sixth millions lie here unprinted" [22, p. 440]. Interestingly, in the same letter, Jacobi obviously mentioned Kulik when he added that "a Mr. K. even proposed to me to compute them up to 25 millions, without compensation, provided they are printed."

¹"In diesem Jahre wurde dem Herrn Geh. Ober-Baurath Crelle zur Berechnung der Primzahlen von der 4ten Million an eine Unterstützung von 300 Rthlr. bewilligt." [1, p. IV].

²The table of primes was examined on April 18, 2012. We thank the staff of the Archives of the Academy of Sciences for their help in making Crelle's *Nachlass* available for consultation.

As described by J.W.L. Glaisher, Gauss always took the greatest interest in factor tables. He made enumerations from the tables of Lambert, Vega, Chernac and Burckhardt [19, pp. 128–130]. In a letter to Encke dated 24 December 1847, Gauss wondered whether Dase could be asked to count the primes in the manuscripts of the tables computed by Crelle (therefore ignoring that Crelle had prepared such an excerpt).

Then, in 1850, Gauss wrote to Dase about the importance of computing the factors for the four millions from 6 millions to 10 millions, given that Crelle had computed the fourth, fifth and sixth millions.³ Gauss mentioned the tables that Crelle gave to the Academy of sciences “several years ago.”

During the 1850s and early 1860s, it was still thought that Crelle’s tables would be printed, and this is the reason why Dase started at 6000000 [12, 13, 14]. But little by little, it became clear that Crelle’s tables were not going to be printed. In 1877, Arthur Cayley wrote for Glaisher to the Academy of sciences in Berlin and Ernst Kummer, who was the secretary of the mathematical section of the Academy, answered that Crelle’s manuscripts had been examined, and that they were found so inaccurate that the publication would never be advisable [19, p. 130]. This then prompted Glaisher to start working on the fourth million in 1878. With help supplied by a grant, he filled the gap and published the three remaining millions between 1879 and 1883 [15, 16, 17].

3 Structure of the tables

The layouts of both tables are similar, but the printed table seems to start a new page for every 10000 interval. In the manuscript table, each form has 60 lines and 96 columns. The columns go three by three and actually allow for 32 columns of numbers. Only the last two digits of a prime are given, and when a new hundred is started, the digits of the thousands and hundreds are given in place of those of the prime, and preceded by an asterisk. For instance, on the first three columns of the first page, we can read the numbers 1, 3, 5, 7, 11, 13, 17, . . . , which are the first primes. After 97, we have $\times 1$ in the manuscript, and $* 1$ in the printed version. This is followed by 01, representing therefore the prime 101. An asterisk line never appears on the last line of a form, and if that might have happened, then the start of that line is moved to the next column.

The numbers of tens of thousands are given at their beginning, which is always on the top of a page. For instance, on the first page, the column starting the range 10000–20000 contains first a large 1, then $\times 00$, then 07, representing the prime 10007. During the first 48 pages, columns are filled continuously, with only minor exceptions, but from 1 million to the end, the pages only cover a range of 20000. After one million, the number of millions is given at the top of the pages. Finally, the ranges of 10000 are also given on the first line of the table. The anomalies concern the end of page 19 where the range 370000–380000 should have started, but was moved to the next page, and similar changes on page 27 and 39. Finally, when the first million starts on page 49, the original manuscript forgot to put a large 00 in the first 2×3 cells, and we have put it, although it will complicate a little comparisons between the manuscript and the reconstruction.

³Gauss’ letter is reproduced in the preface of Dase’s seventh million [12].

4 Reconstruction and accuracy

4.1 Reconstruction

We have reconstructed Crelle's manuscript table of primes for the first six millions as well as how Crelle's table might have looked when printed, according to an extrapolation of the one-page excerpt inserted at the beginning of the manuscript table.

We took care of some small details, in particular some idiosyncrasies mentioned above. In general, we have tried to be as close as possible to the original table. However, there are some details that were not checked in the original table. There are for instance ten intervals of one hundred without any prime in the range 1 to 6 millions. We have assumed that Crelle did not write the number of hundreds in a cell in that case, but this should be checked. These ten prime gaps missing a hundred are the following ones: 1671781 to 1671907, 2637799 to 2637911, 3117299 to 3117421, 3933599 to 3933731, 4640599 to 4640717, 4652353 to 4652507, 5178193 to 5178301, 5518687 to 5518817, 5837399 to 5837501, and 5845193 to 5845309.

For the projected printed version, we have had to extrapolate the entire table based on the single page found at the beginning of the manuscript. We have assumed that each printed page would cover a range of 10000, but ranges of 20000 would perhaps have been used after some value.

4.2 Accuracy

The reconstruction made it possible to check the accuracy of Crelle's table, at least on some samples.

We have first checked the first and last value on the first 48 pages (first million) and only two errors were found:

- at the end of page 6, the last cell is empty in Crelle's manuscript, whereas it should contain the value 105563; we presume that somewhere on the page one prime must be missing;
- at the end of page 24, Crelle gives the value 476681, but it should be 476639; presumably three primes have been forgotten on that page; the error carries over to page 25 which starts with 476683; the last value of page 25 is correct, certainly because the page starts two new 10000 intervals which do not carry over such errors.

We have then compared the list of primes from 3000000 to 3000600, from 3999000 to 4000000, and from 5998801 to 6000000, and we found no errors. We can therefore conclude that, at least on these intervals, the lists of primes is correct. We can still not conclude on the tables of factors, but we believe that Crelle's tables were perhaps not as inaccurate as has been written.

References

The following list covers the most important references⁴ related to Crelle's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

⁴**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.

Crelle's table of primes (1842) (reconstruction, 2012)

Table of prime numbers from 230,000 to 250,000. The table is organized into two main sections: 230,000-240,000 and 240,000-250,000, with a column number 13 on the far right. Each row contains a sequence of prime numbers, with some numbers enclosed in boxes and some having multiplication symbols next to them.

Crelle's table of primes (1842) (reconstruction, 2012)

Crelle's table of primes (1842) (reconstruction, 2012)

Table with columns 460000-470000 and 470000-480000, containing numerical data and prime indicators (x, /, *).

Crelle's table of primes (1842) (reconstruction, 2012)

Table with 27 columns and multiple rows, containing numbers and symbols (x, /) representing prime factors. The table is divided into two main sections: 520 000-530 000 and 530 000-540 000. Large numbers 52 and 53 are prominently displayed at the top of their respective sections. The numbers in the table are arranged in a grid-like pattern, with some cells containing multiplication symbols (x) or division symbols (/) indicating prime factorizations.

Crelle's table of primes (1842) (reconstruction, 2012)

720 000-730 000

730 000-740 000

36.

A large grid of numbers with mathematical symbols (x, /) indicating divisibility or primality. The grid contains numbers from 720,000 to 740,000. Large numbers 72 and 73 are prominently displayed in the top left and top right of the grid respectively. The grid is organized into rows and columns, with various mathematical symbols interspersed among the numbers.

Crelle's table of primes (1842) (reconstruction, 2012)

Table of prime numbers from 940,000 to 960,000, organized into two columns (940,000-950,000 and 950,000-960,000) with a page number 46. The table contains a dense grid of numbers with various mathematical symbols (x, /, %) indicating divisibility or primality tests.

Table of numbers from 2,400,000 to 2,410,000. The page is numbered 119. The table contains a grid of numbers with 'x' markers indicating composites and empty cells indicating primes. The numbers are arranged in rows and columns, with a central column of numbers from 40 to 41 and a rightmost column of numbers from 119 down to 0.

Table with columns labeled 2,820 000-2,830 000 and 2,830 000-2,840 000, and a rightmost column labeled 140. The table contains a dense grid of numbers and multiplication symbols.

Table with columns for prime ranges (2,840,000-2,850,000 and 2,850,000-2,860,000) and a final column labeled '141.'. The table contains a grid of numbers and mathematical symbols (x, /) representing prime products and divisions.

Crelle 's table of primes (1842) (reconstruction, 2012)

2

Table with two columns of numbers and a grid of symbols (x, /) representing prime divisibility. Left column: 2,900,000-2,910,000. Right column: 2,910,000-2,920,000. Row 1: 90 and 91. Row 144: 144.

3

A large grid table representing Crelle's table of primes (1842) for the range 3,300,000 to 3,310,000. The table is 30 rows high and 164 columns wide. The first row contains the number 30 followed by 163 columns of prime numbers. The second row contains the number 31 followed by 163 columns of prime numbers. The numbers in the grid are arranged in a regular pattern, representing the sequence of primes in the specified range.

3

Table with two main sections: '3,320 000-3,330 000' on the left and '3,330 000-3,340 000' on the right. Each section contains a grid of numbers with various mathematical symbols like 'x' and '3' indicating prime status or operations. The rightmost cell contains the page number '165.'.

3

Table of primes from 3,380,000 to 3,390,000. The table shows numbers in a grid with multiplication symbols (x) indicating composites and empty cells indicating primes. The numbers range from 3,380,000 to 3,390,000. A page number '168.' is visible in the top right corner of the table.

3

A large grid containing Crelle's table of primes (1842) reconstruction, 2012, showing prime factors for numbers from 3,420,000 to 3,430,000 and 3,430,000 to 3,440,000. The table is divided into columns for these ranges, with prime factors indicated by numbers and symbols like 'x'. The rightmost column contains the number 170.

3

Table of prime numbers from 3,560,000 to 3,570,000 and 3,570,000 to 3,580,000. The table is organized into two main sections with sub-sections for 56 and 57. It contains a grid of numbers with various mathematical symbols like multiplication (x) and division (÷) indicating divisibility or relationships between numbers. The rightmost column contains the page number 177.

3

Table with columns for prime ranges 3,800,000-3,810,000 and 3,810,000-3,820,000. The table contains a grid of numbers with 'x' symbols indicating multiplication, and a final column on the right labeled '189'.

3

Table with columns labeled '3,840 000-3,850 000' and '3,850 000-3,860 000', and a page number '191.' at the bottom right. The table contains a grid of numbers with various mathematical symbols like 'x', '÷', and '√' interspersed throughout the digits.

3

Table of prime numbers from 3,940,000 to 3,960,000. The table is organized into two main sections: 3,940 000-3,950 000 and 3,950 000-3,960 000. Each section contains a grid of numbers with multiplication signs (x) indicating composites and empty cells representing primes. The page number 196 is located in the top right corner.

3

Table of primes from 3,960,000 to 3,970,000 and 3,970,000 to 3,980,000. The table contains two main sections with columns of numbers and rows of prime factors, including the number 197 in the top right corner.

Table of prime factors for numbers 4,620,000 to 4,630,000 and 4,630,000 to 4,640,000. The table contains two main sections, each starting with a large number (62 and 63) and followed by their prime factorizations. The factors are listed as sequences of digits, with 'x' indicating multiplication. The table ends with the page number 230.

4

4,740 000-4,750 000 4,750 000-4,760 000 236. Table with numerical entries and symbols (x, /) representing a sieve process.

4

Table of prime numbers from 4,960,000 to 4,980,000. The table is organized into two main sections: 4,960,000-4,970,000 and 4,970,000-4,980,000. Each section contains a grid of numbers with multiplication signs (x) indicating composite numbers. The grid is 20 columns wide and 100 rows high. The first column of the first section is labeled '96' and the first column of the second section is labeled '97'. The rightmost column of the second section is labeled '247'. The numbers are arranged in a regular grid pattern, with multiplication signs placed between numbers to indicate their composite nature.

Table of primes from 5,040,000 to 5,050,000 and 5,050,000 to 5,060,000. The table is divided into two main sections. The left section, labeled '04', covers the range 5,040,000-5,050,000 and contains 100 columns of data. The right section, labeled '05', covers the range 5,050,000-5,060,000 and contains 100 columns of data. Each cell in the table contains a sequence of digits, with 'x' symbols indicating multiplication operations between certain digits. The numbers are arranged in a grid format, with rows and columns of prime numbers and their products.

5

Table of prime reconstruction for the range 5,100,000 to 5,120,000. The table is a grid of numbers with various mathematical symbols (x, /) indicating prime status or relationships. The top row shows the range 5,100,000-5,110,000 and 5,110,000-5,120,000. The rightmost column is labeled '254.'. The grid contains many numbers, some with 'x' or '/' symbols, representing a complex reconstruction of prime numbers.

Table with 100 columns and 50 rows. The header contains the range '5,320 000-5,330 000' and '5,330 000-5,340 000'. The table contains a grid of numbers with 'x' marks indicating primality. The final column contains the page number '265'.

Table with columns for ranges 5,360,000-5,370,000 and 5,370,000-5,380,000, and a page number 267. The table contains a dense grid of numbers and multiplication symbols (x) representing a sieve of Eratosthenes.

Table with columns labeled '5,540 000-5,550 000' and '5,550 000-5,560 000'. The table contains a grid of numbers and symbols (x, /) representing a reconstruction of Crelle's table of primes. The grid is approximately 30 rows by 300 columns. The rightmost cell contains the number '276.'.

A grid table containing numerical data, likely prime numbers, with columns labeled '5,780 000-5,790 000' and '5,790 000-5,800 000'. The table includes a page number '288' in the top right corner and a large number '78' in the top left corner.

Table of primes with two main sections: 5,920,000-5,930,000 and 5,930,000-5,940,000. The table contains numerical entries and multiplication signs (x) in a grid layout. The page number 295 is located in the top right corner.

5

Table of prime numbers from 5,940,000 to 5,960,000. The table is organized in rows and columns, with the number '5' prominently displayed at the top center. The table header indicates the range '5,940 000-5,950 000' and '5,950 000-5,960 000'. The table contains a grid of numbers and symbols, representing prime numbers and their relationships.
