HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the first World Computer Congress held in Paris the previous year. A federation for societies working in information processing, IFIP's aim is two-fold: to support information processing in the countries of its members and to encourage technology transfer to developing nations. As its mission statement clearly states:

IFIP is the global non-profit federation of societies of ICT professionals that aims at achieving a worldwide professional and socially responsible development and application of information and communication technologies.

IFIP is a non-profit-making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees and working groups, which organize events and publications. IFIP's events range from large international open conferences to working conferences and local seminars.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is generally smaller and occasionally by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

IFIP distinguishes three types of institutional membership: Country Representative Members, Members at Large, and Associate Members. The type of organization that can apply for membership is a wide variety and includes national or international societies of individual computer scientists/ICT professionals, associations or federations of such societies, government institutions/government related organizations, national or international research institutes or consortia, universities, academies of sciences, companies, national or international associations or federations of companies.

Preface

This volume contains the papers presented at the 12th World Conference on Information Security Education (WISE 12) held during June 25–27, 2019, in Lisbon. It was held in conjunction with the 34th IFIP International Conference on Information Security and Privacy Protection (IFIP SEC 2019). WISE 12 was organized by the IFIP Working Group 11.8, which is an international group of people from academia, government, and private organizations who volunteer their time and effort to increase knowledge in the very broad field of information security through education. WG 11.8 has worked to increase information security education and awareness for almost two decades. This year, WG11.8 organized the 12th conference of a successful series under the theme “Education in Proactive Information Security.” We received 26 submissions from around the world. Each submission was blind reviewed by at least three international Program Committee members. The committee decided to accept 12 full papers, and thus the acceptance rate for the papers is 46%.

During the conference, a working group discussion addressed the “Graduate Student Pipeline Problem in Cybersecurity.” It was chaired by Susanne Wetzel of Stevens Institute of Technology (USA). The topic is driven by surveys and observations in the USA, which indicate a mismatch between open faculty positions in cybersecurity and the number of accepted academic positions from the newly awarded PhDs in cybersecurity. In fact, the majority of them joined industry. The workgroup discussed the effect on education of the next generation of students in cybersecurity and explored options to address the problem. With high-paying jobs in industry that are already available to graduates from bachelor or master programs, what is the incentive for someone to pursue a PhD? What can and needs to be done in order to attract graduates to academic instead of industry jobs?

This conference took place thanks to the support and commitment of many individuals. First, we would like to thank all TC-11 members for continually giving us the opportunity to serve the working group and organize the WISE conferences. Our sincere appreciation also goes to the members of the Program Committee, to the external reviewers, and to the authors who trusted us with their intellectual work. We are grateful for the support of WISE11.8 Officers Lynn Futcher, Matt Bishop, Natalia Miloslavskaya, and Erik Moore. Finally, we would like to thank the local organizers for the support. As for the preparation of this volume, we sincerely thank Erika Siebert-Cole and our publisher Springer for their assistance.
