**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Modeling HPC applications for *in situ* Analytics

Valentin Honoré<sup>1</sup> - Brice Goglin<sup>1</sup>, Guillaume Aupy<sup>1</sup>, Bruno Raffin<sup>2</sup>

## High Performance Computing

### Application

- ▷ Simulation: compute-intensive
- ▷ Analysis: post-processing of data
- ▶ Data management, fault tolerance & large-scale scheduling
- ▶ out-of-machine vs *in-machine* paradigm

## Application Models & Platform Features

- ▶ Asynchronous (overlap) vs Synchronous (no overlap)

## Objective

- ▶ Optimize resource allocation between the analysis and the simulation
- ▶ Provide efficient algorithms to perform both
  - ▷ resource partitioning
  - ▷ analysis allocations

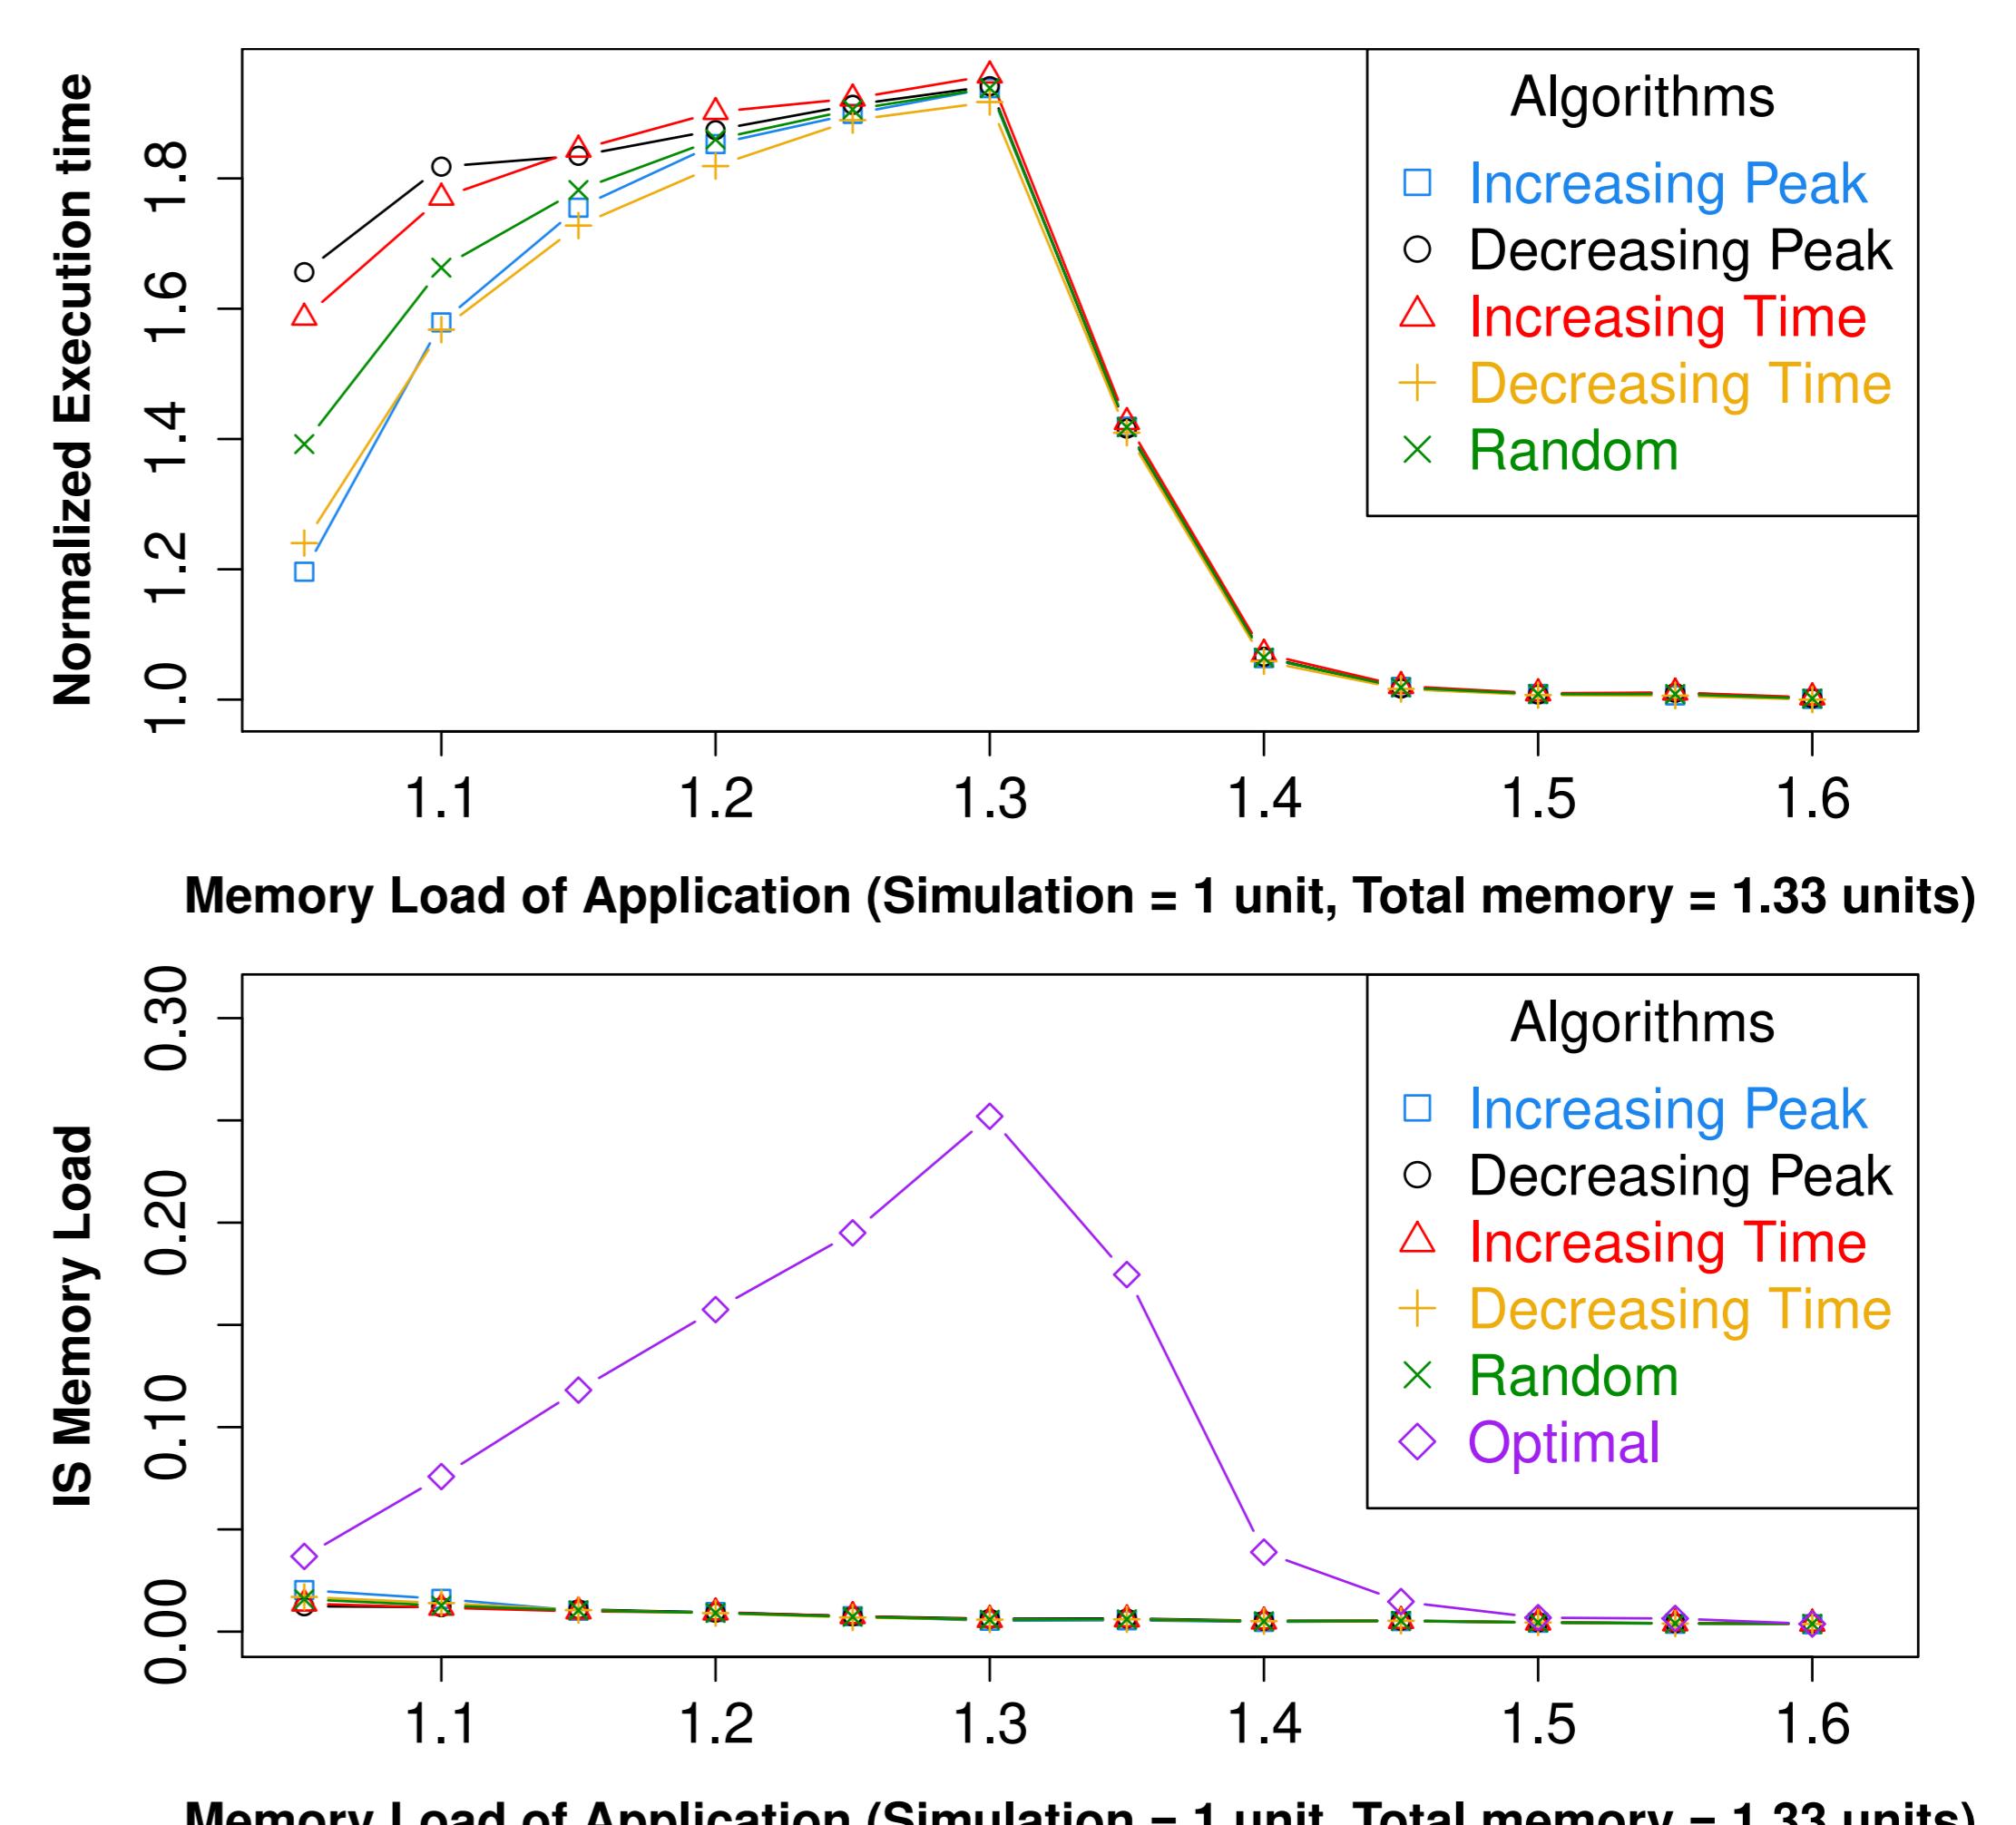

## Contributions

- ▶ General model for HPC applications (simulation, analysis, target architecture ...)
- ▶ New algorithms for
  - ▷ resource partitioning problem (theoretical analysis of the model)
  - ▷ scheduling problem (optimal non-polynomial + greedy)
- ▶ Evaluation on synthetic applications: extract key elements for *in situ* functions

## Resource Partitioning Problem

- ▶ Application time: maximum between simulation phase ( $T_S$ ) and analysis ( $T_A^{IS}$  and  $T_A^{IT}$ )
- ▶ Given a scheduling ( $\mathcal{A}^{IS}, \mathcal{A}^{IT}$ ), find  $n^* \leq C_n$ , and  $c^* \leq c$  that minimize  $\max(T_S(n^*, c^*), T_A^{IS}(\mathcal{A}^{IS}, n^*, c^*), T_A^{IT}(\mathcal{A}^{IT}, n^*))$
- ▶ How to determine the scheduling ( $\mathcal{A}^{IS}, \mathcal{A}^{IT}$ )?

## Simulation Results: Asynchronous Scenario

## Simulation Results: Importance of *in situ* Resource Usage
