HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Oceanic Dynamics under Location Uncertainty

Towards a consistent stochastic modelling

Long Li Werner Bauer Etienne Mémin

Fluminance Group
Inria Rennes France & Université Rennes 1 France

- **Why stochastic modeling ?**

- Take into account small-scale / unresolved processes
- Uncertainty Quantification, Ensemble Forecasts

- **Why consistent model ?**

- Both scales must respect appreciate physical laws
- Losing consistency may provide wrong statistics

Outline

1 Governing Equations

- Location Uncertainty Principles
- Barotropic Quasi–Geostrophic Model under LU

2 Experimental Evaluations

- Structure—preserving of Rossby wave
- Ensemble forecasting verification of SQG_{MU}
- Time—statistics of wind—driven circulation

3 Summary

- **Stochastic flow :**

$$dX_t = \mathbf{u}(X_t, t)dt + \boldsymbol{\sigma}(X_t, t)dB_t$$

large-scale resolved
 small-scale unresolved

- **Functional process :**

$$\boldsymbol{\sigma}(x, t)dB_t = \int_D \check{\boldsymbol{\sigma}}(x, y, t)dB_t(y)dy$$

correlated in space uncorrelated in time
 symmetric kernel
 space-time white noise

- **Variance tensor :**

$$\mathbf{a} \triangleq \boldsymbol{\sigma}\boldsymbol{\sigma}^T = \mathbb{E}[\boldsymbol{\sigma}dB_t(\boldsymbol{\sigma}dB_t)^T]/dt$$

homogeneous / heterogeneous

- **Transport of a random tracer :**

$$(\nabla \cdot \boldsymbol{\sigma} = 0)$$

$$D_t \theta \triangleq d_t \theta + \mathbf{u}^* \cdot \nabla \theta dt + \boldsymbol{\sigma} dB_t \cdot \nabla \theta - \frac{1}{2} \nabla \cdot (a \nabla \theta) dt = 0$$

corrected drift
 multiplicative noise
 subgrid diffusion

$\mathbf{u} - \frac{1}{2} \nabla \cdot \mathbf{a}$

Balanced Energy → $(\nabla \cdot \mathbf{u}^* = 0)$

$$\frac{d}{dt} \int_D \frac{1}{2} \theta^2 = 0$$

- **Evolution of the potential vorticity with source processes :**

$$D_t q = S_1(\nabla \mathbf{u}) dt + S_2(\nabla \mathbf{u}) dB_t$$

- **Evolution of the stream function :**

$$q = \Delta \psi - \psi / L_R^2 + f$$

- **Strong incompressible constraints :**

$$\mathbf{u} = \nabla^\perp \psi, \quad \boldsymbol{\sigma} dB_t = \nabla^\perp \varphi dB_t, \quad \nabla \cdot \mathbf{u}^* = 0$$

Conservation of total energy :

$$\frac{d}{dt} \int_D \frac{1}{2} \left[\|\nabla \psi\|^2 + (\psi / L_R^2)^2 \right] = 0$$

$$\left[\text{Sketch : } \int_D \psi \boldsymbol{\sigma} \circ dB_t \cdot \nabla (q - f) = \int_D \psi S_2(\nabla \mathbf{u}) \circ dB_t \right]$$

- **Transport of a prognostic passive tracer :**

$$D_t q' = 0$$

Conservation of tracer energy :

$$\frac{d}{dt} \int_D \frac{1}{2} (q')^2 = 0$$

Outline

1 Governing Equations

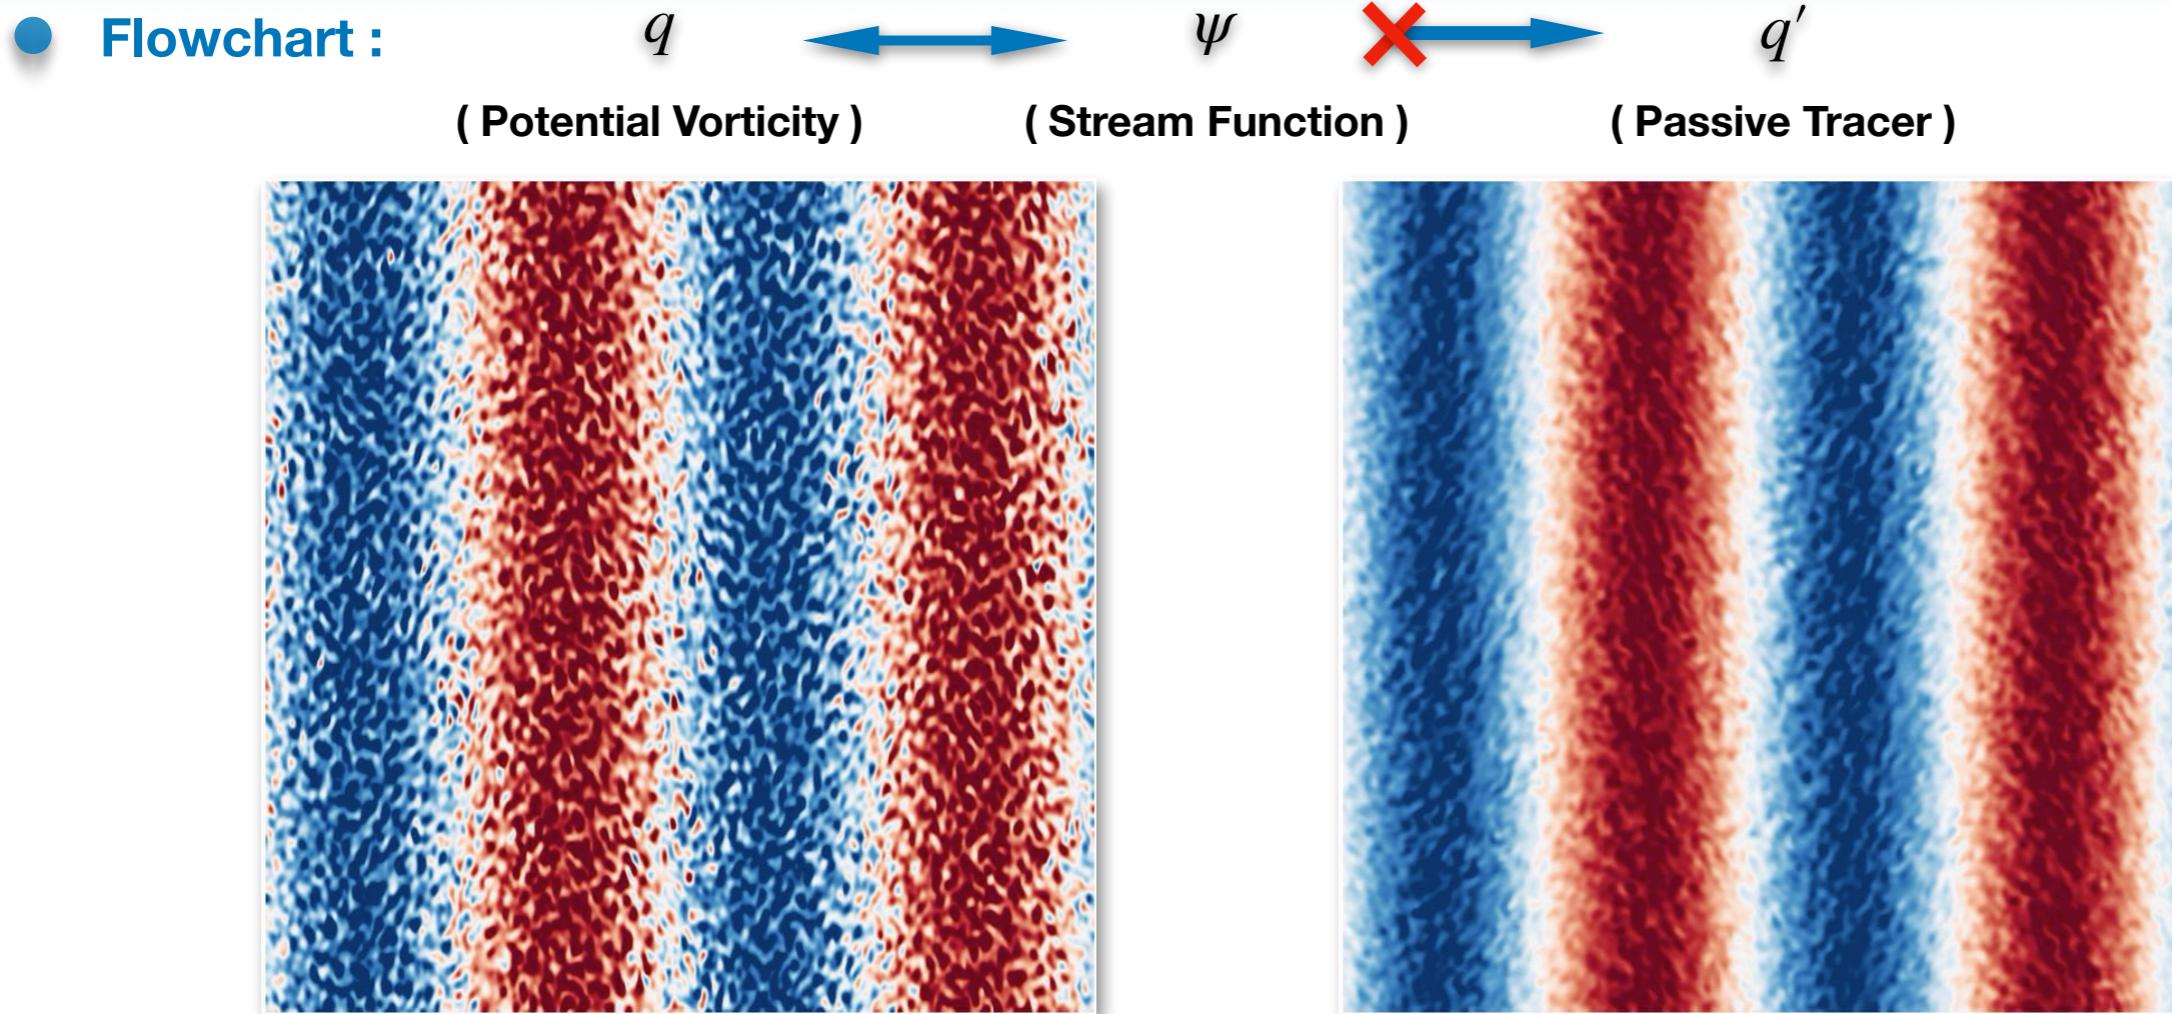

- Location Uncertainty Principles
- Barotropic Quasi–Geostrophic Model under LU

2 Experimental Evaluations

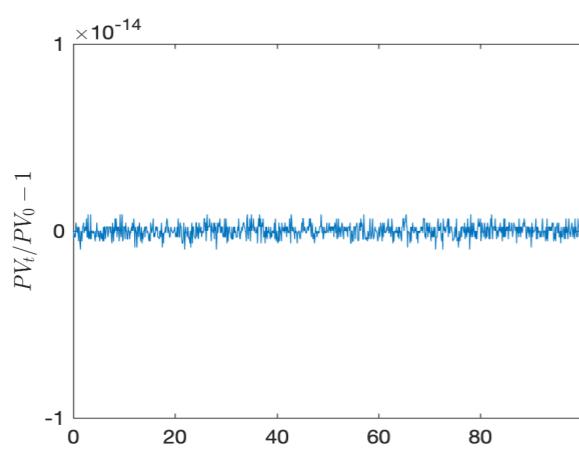

- Structure—preserving of Rossby wave
- Ensemble forecasting verification of SQG_{MU}
- Time—statistics of wind—driven circulation

3 Summary

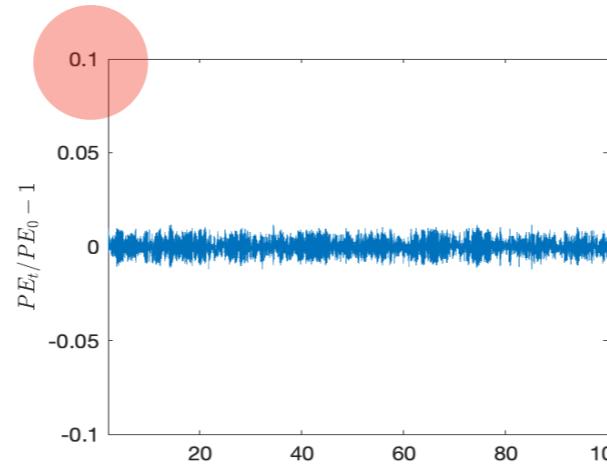

Structure-preserving of Rossby wave

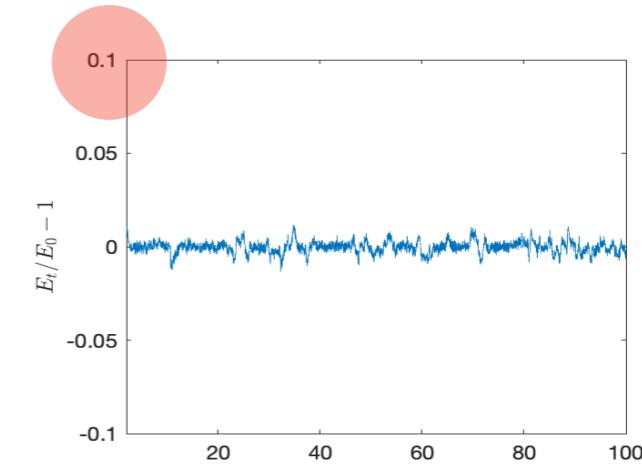

● Illustration of conservations :

Passive Tracer

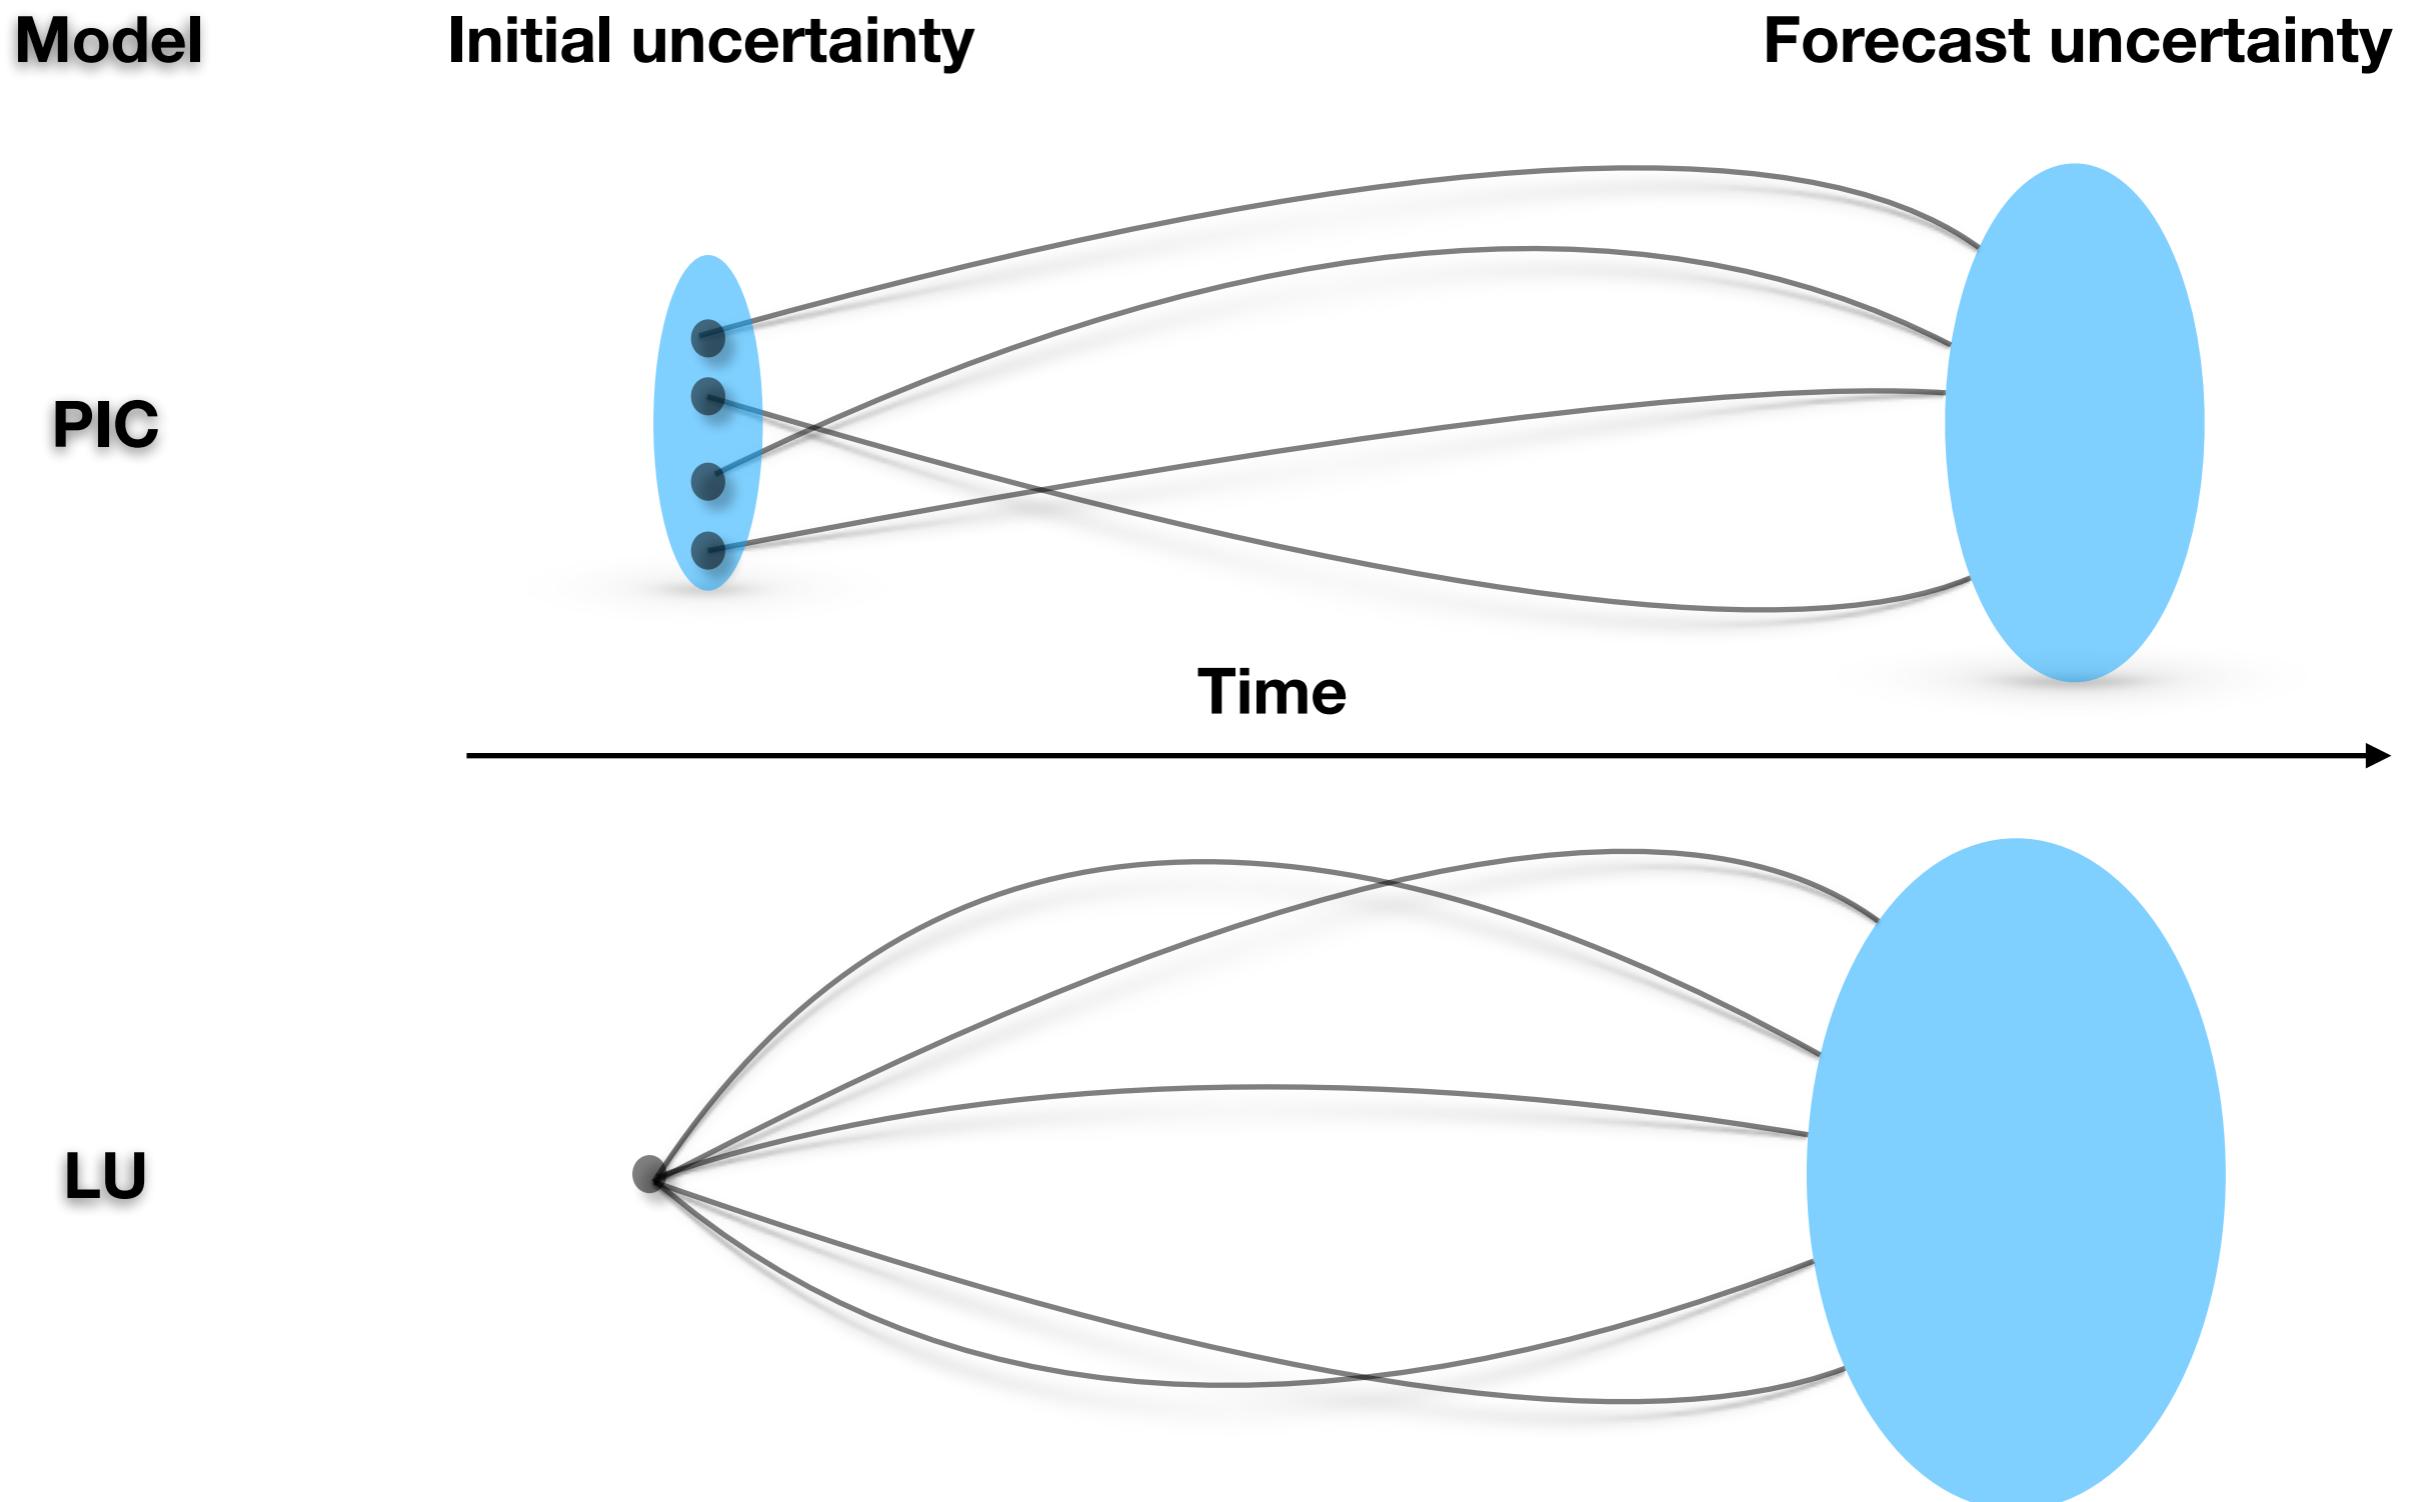

Tracer Energy

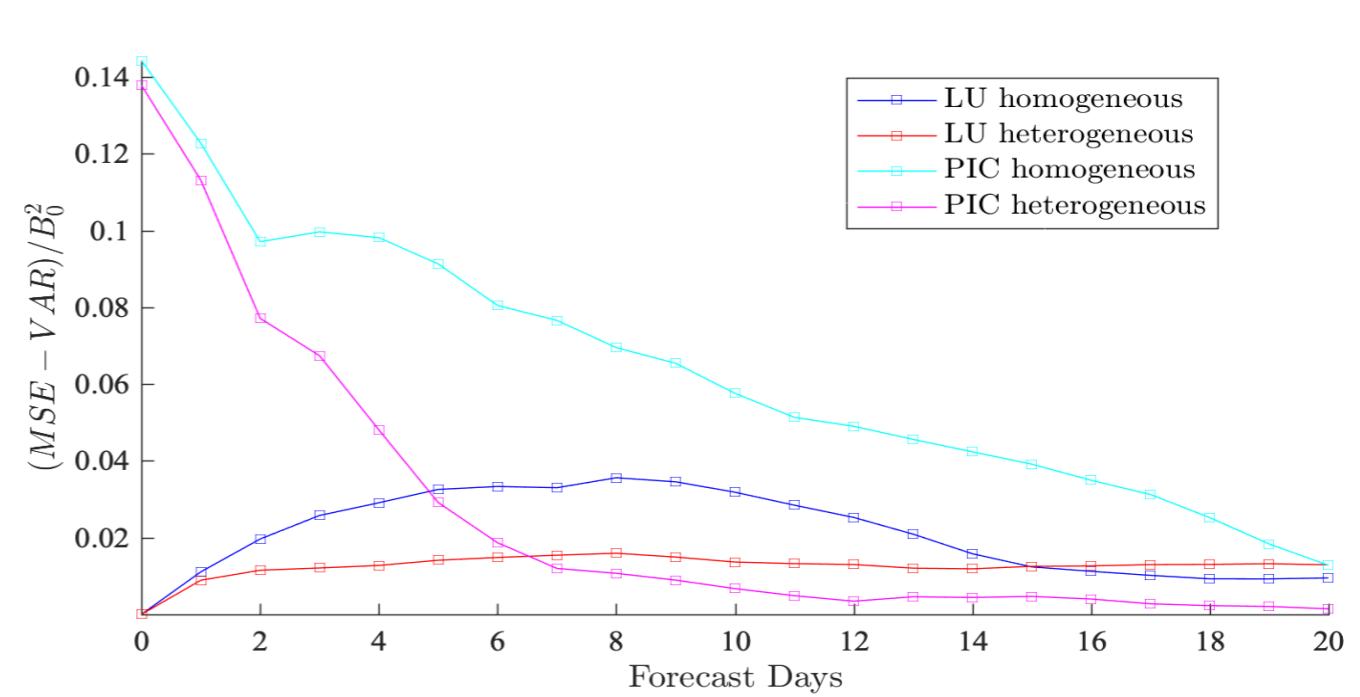

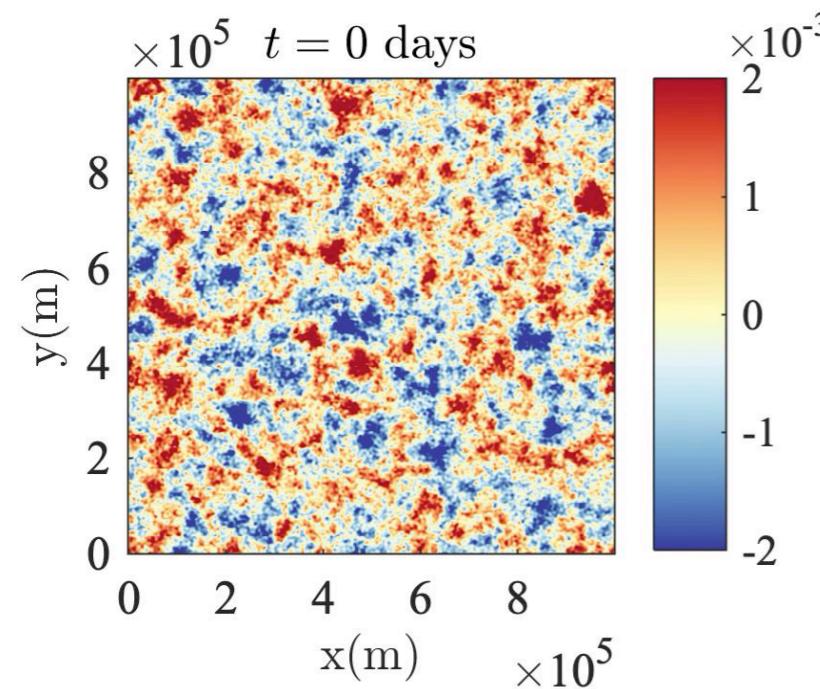

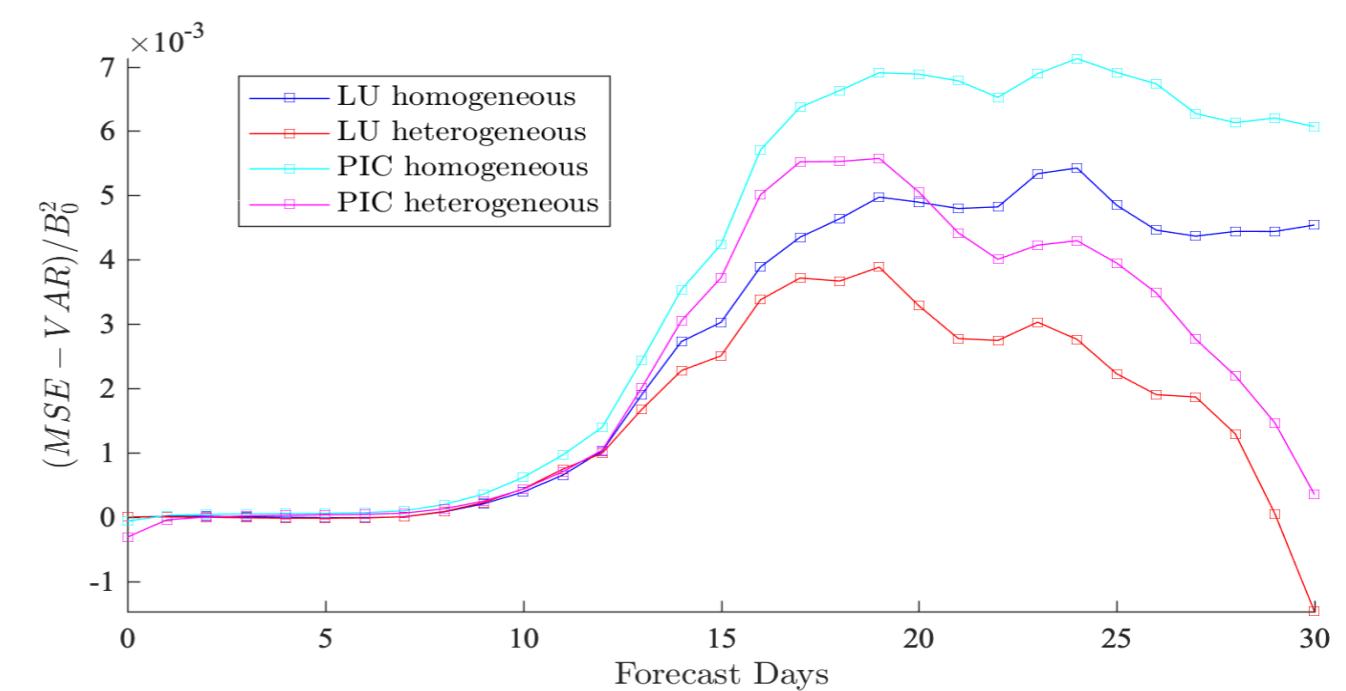

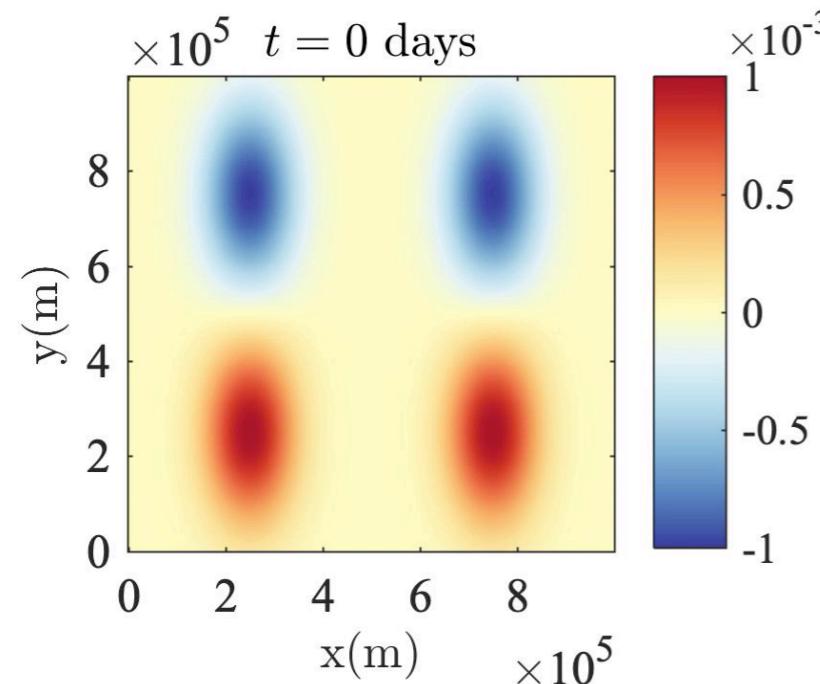

Total Energy

Ensemble forecasting verification of SQG_{MU}

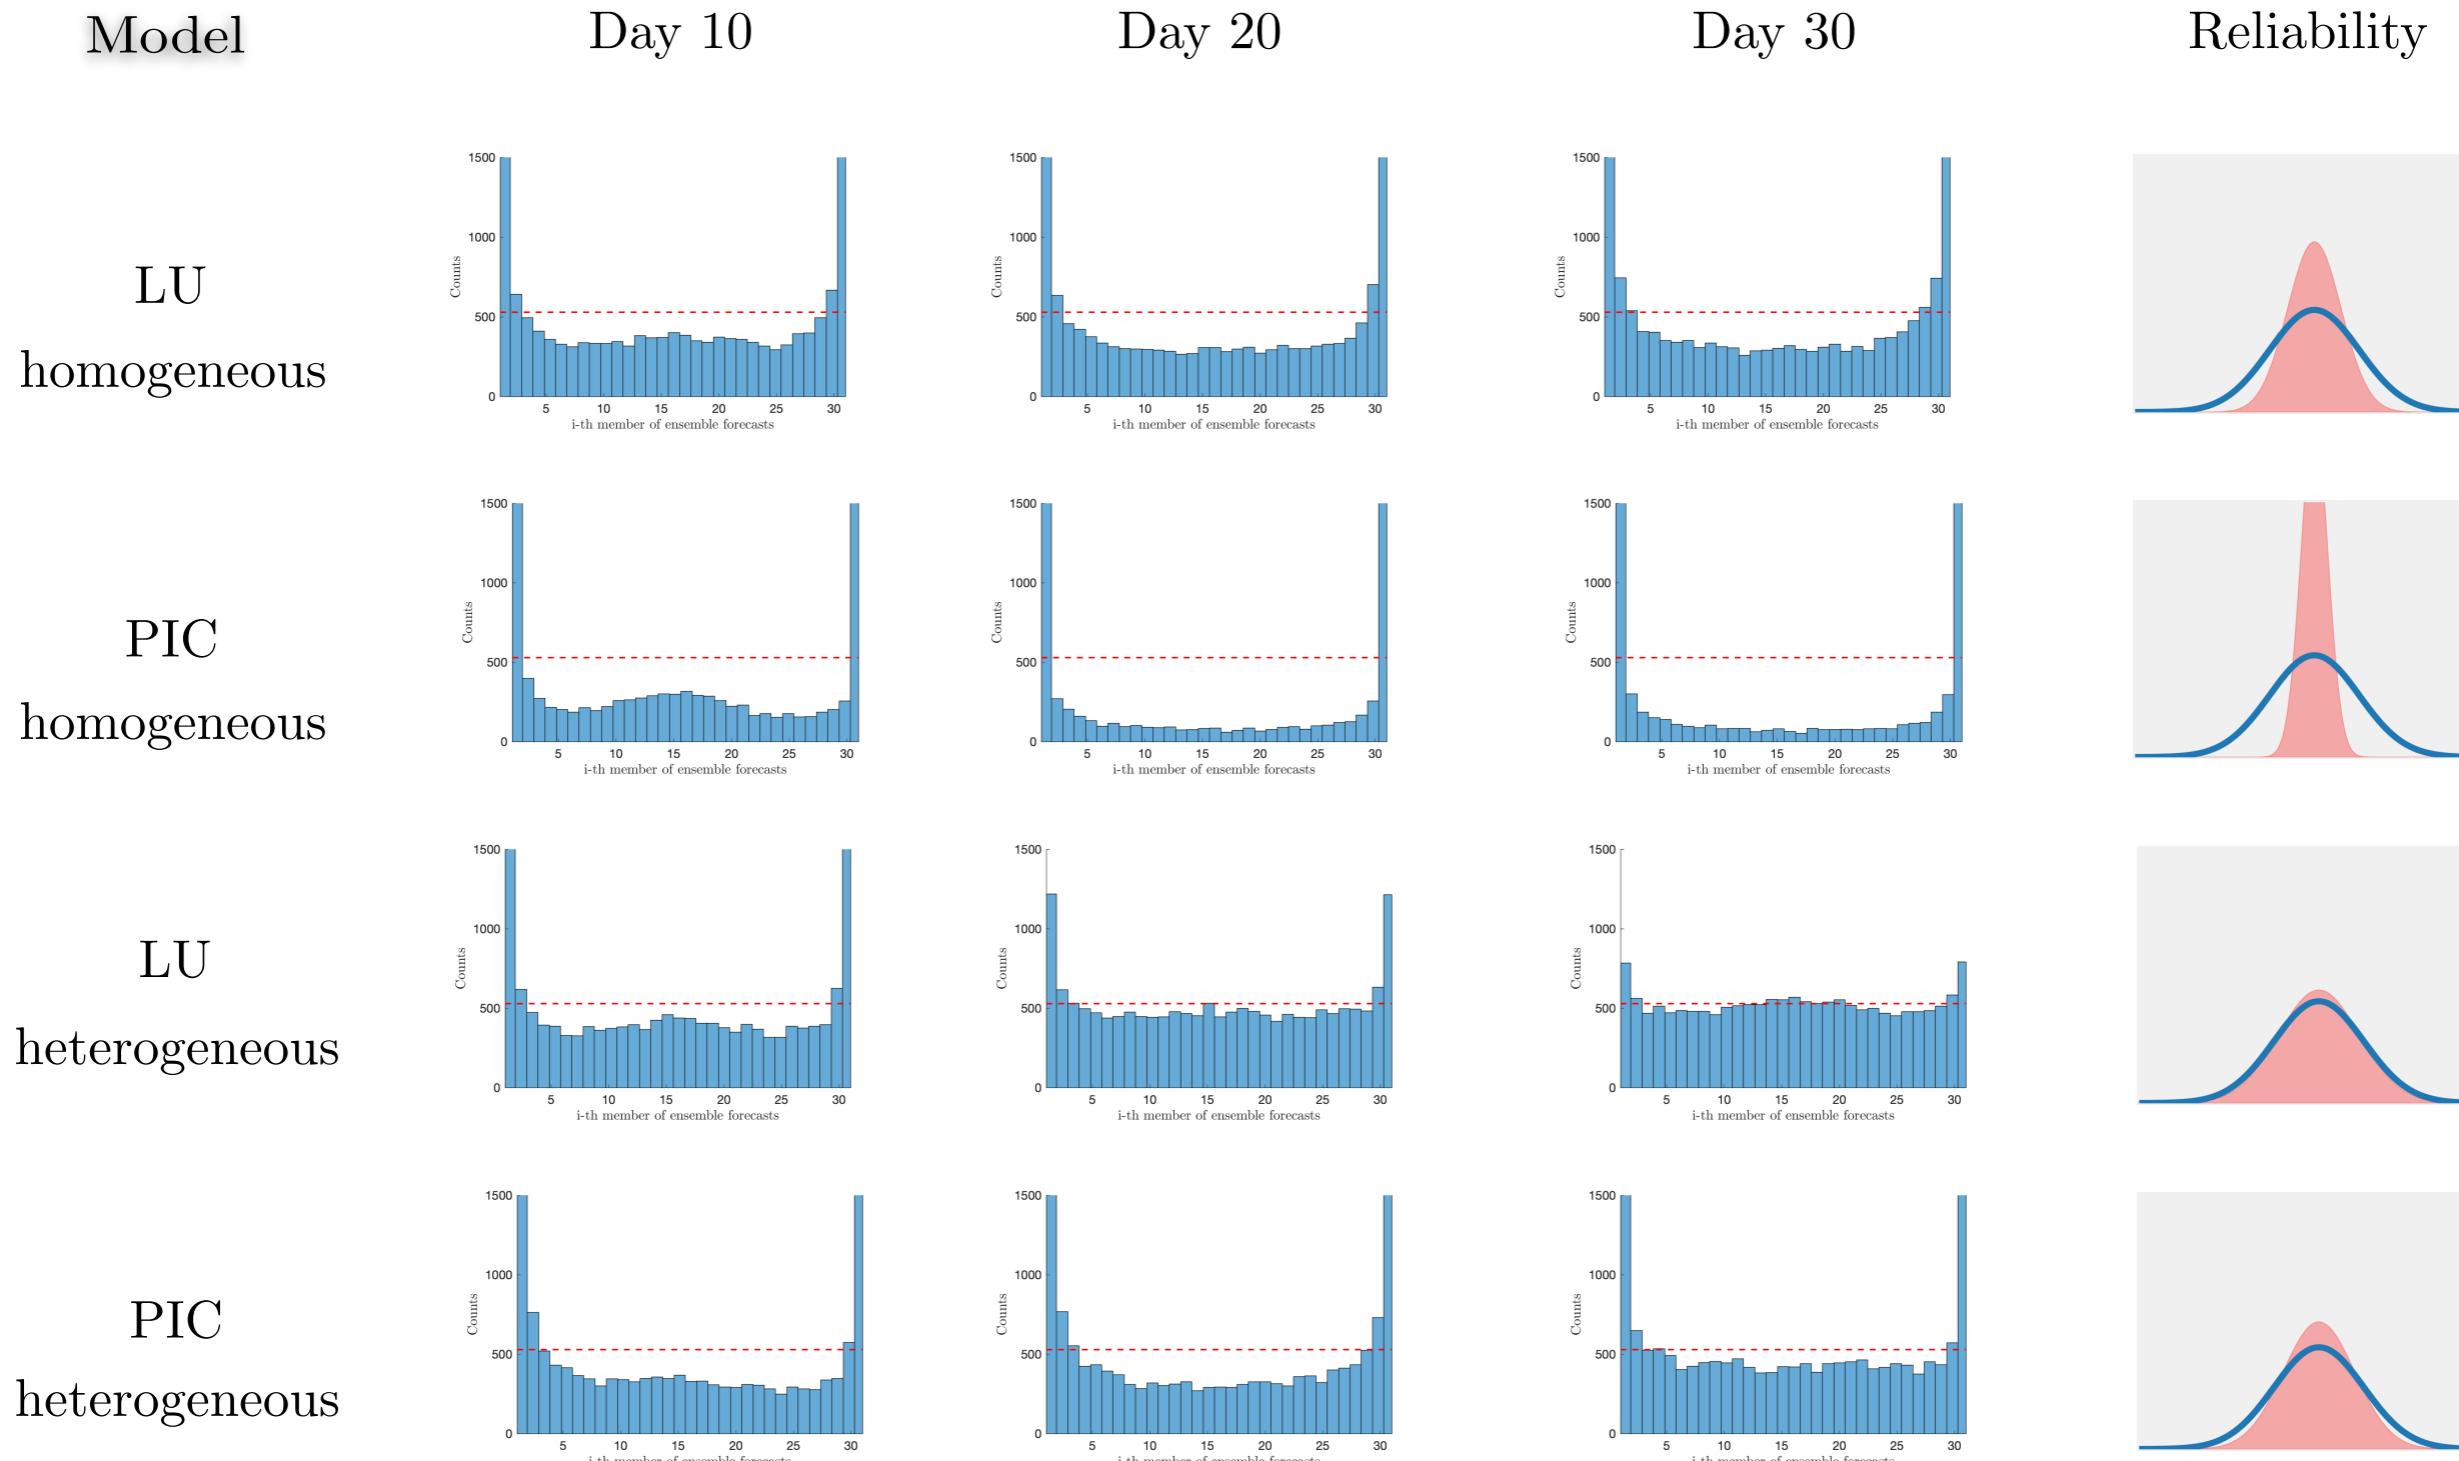

- **Illustration of ensemble prediction systems :**

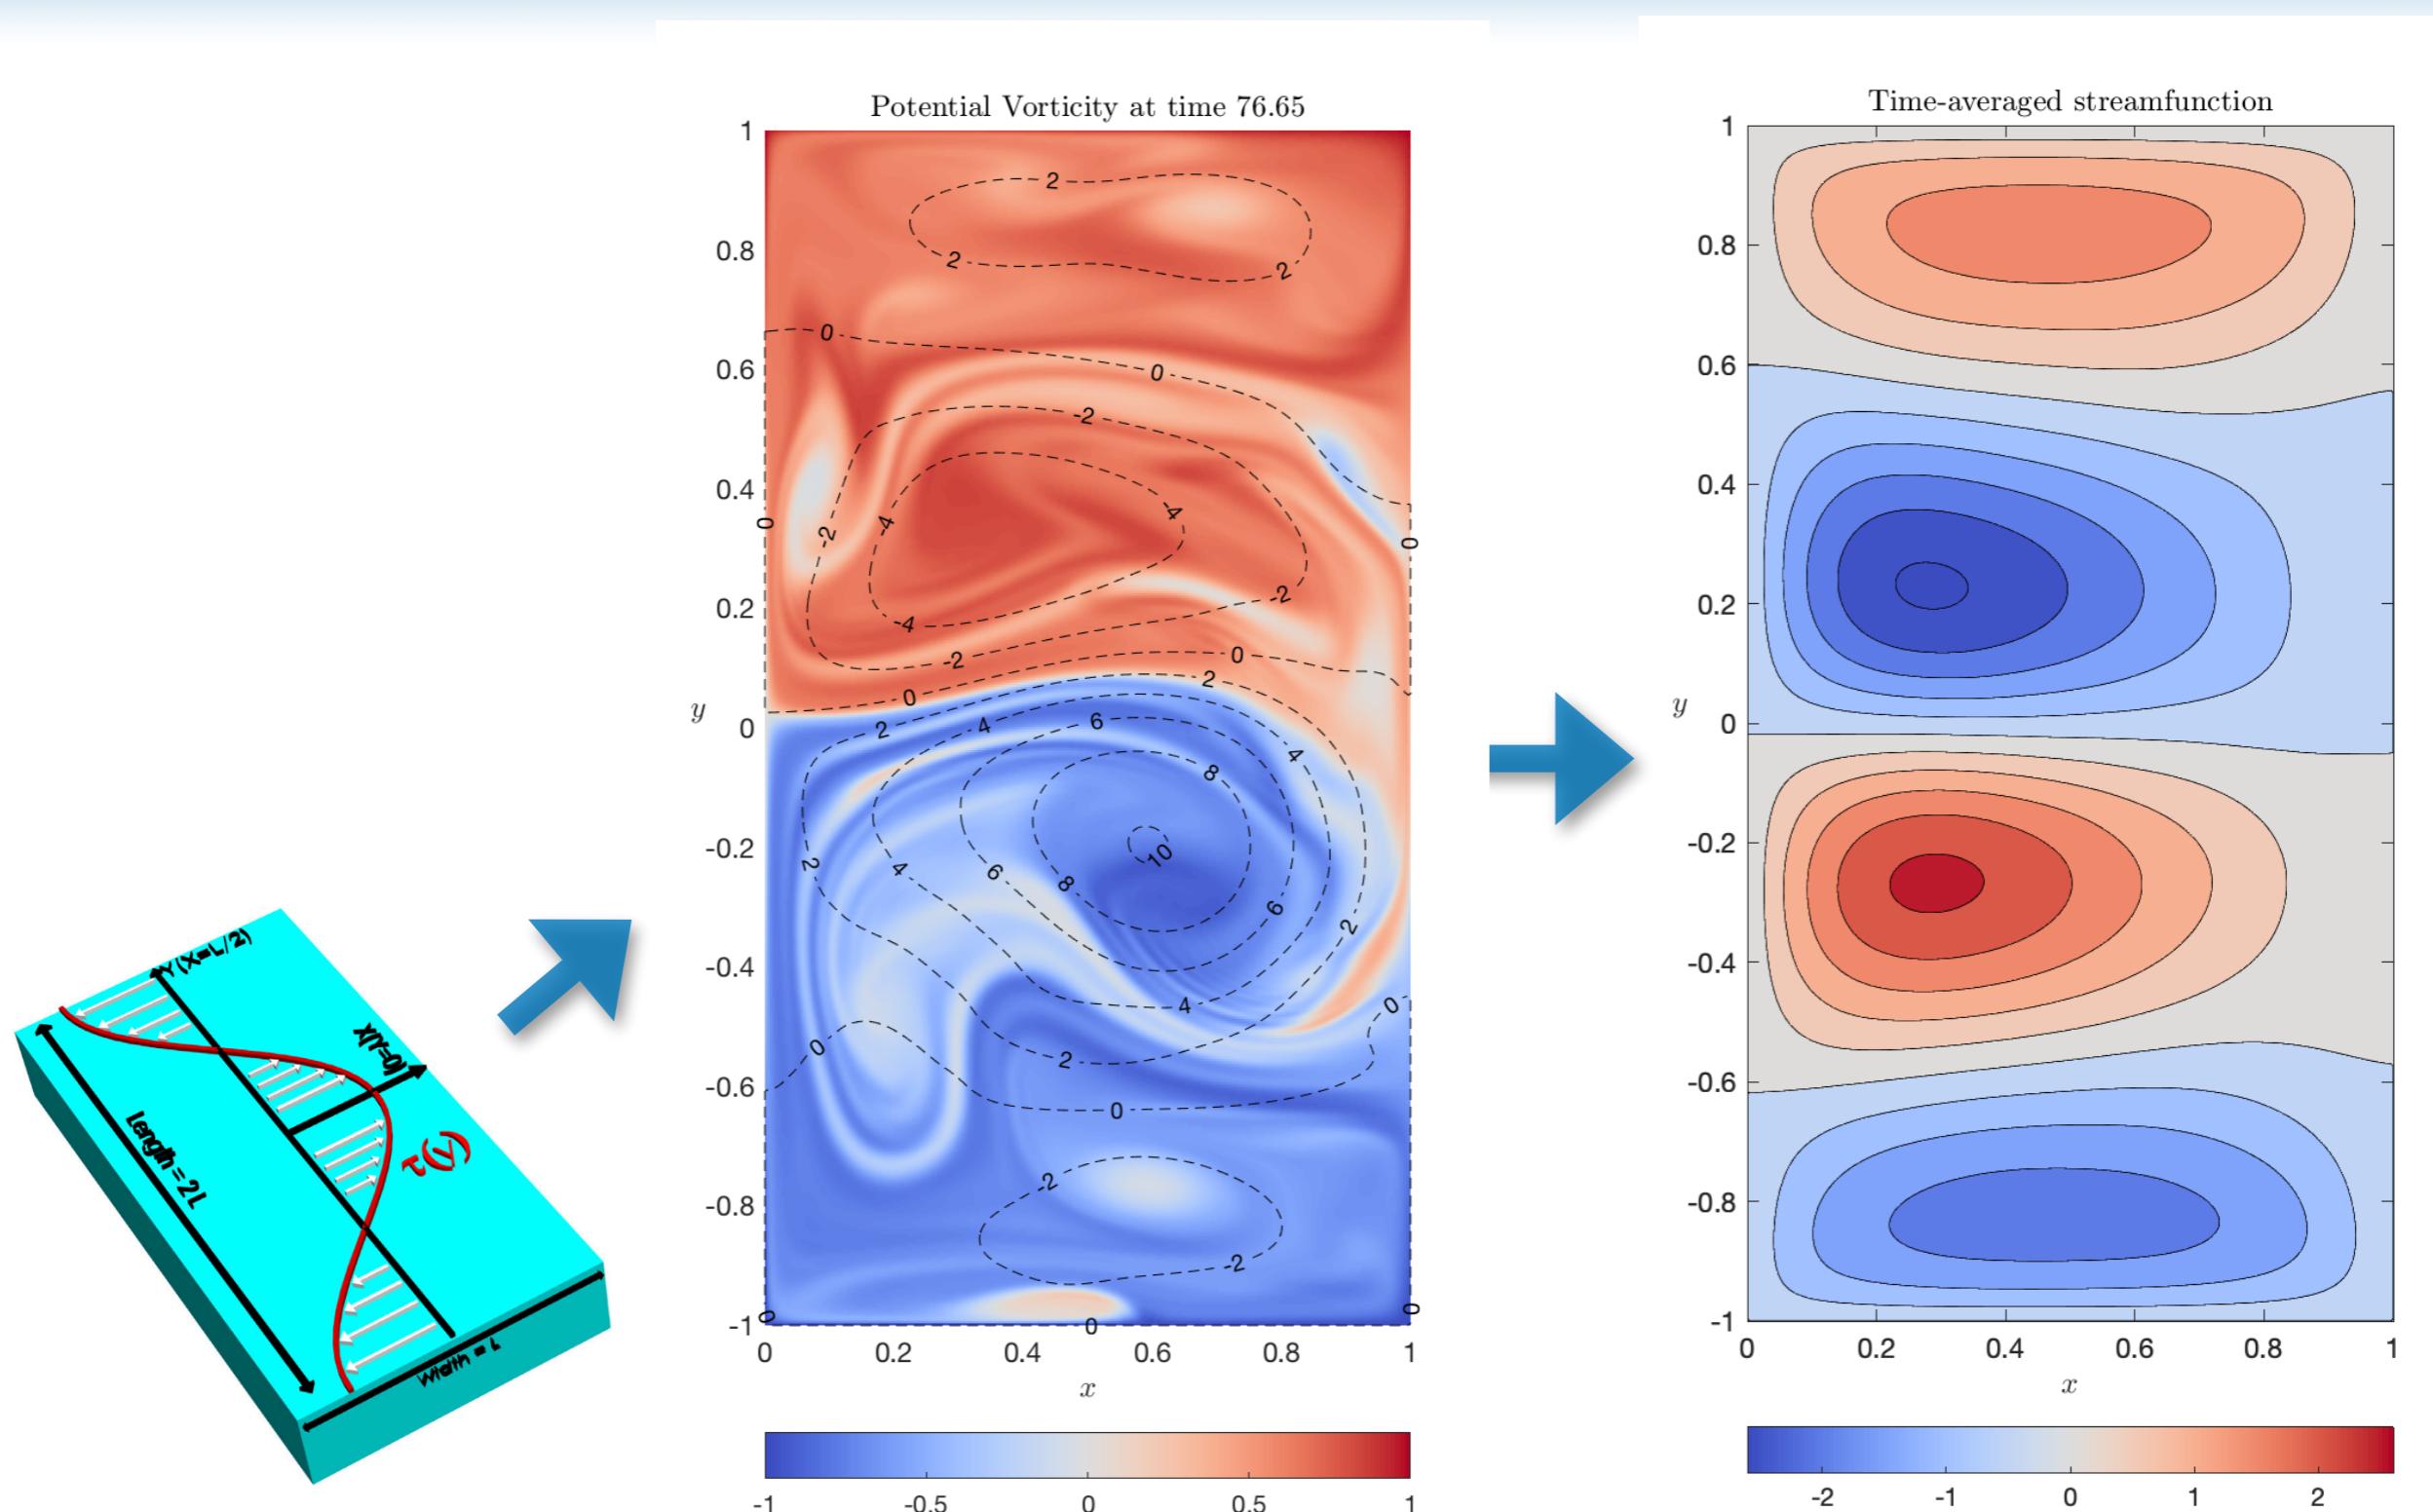

- **Reliability – Ensemble Spread match MSE of the Ensemble Mean :**

- **Reliability – Ranked Histogram of Ensemble Members :**

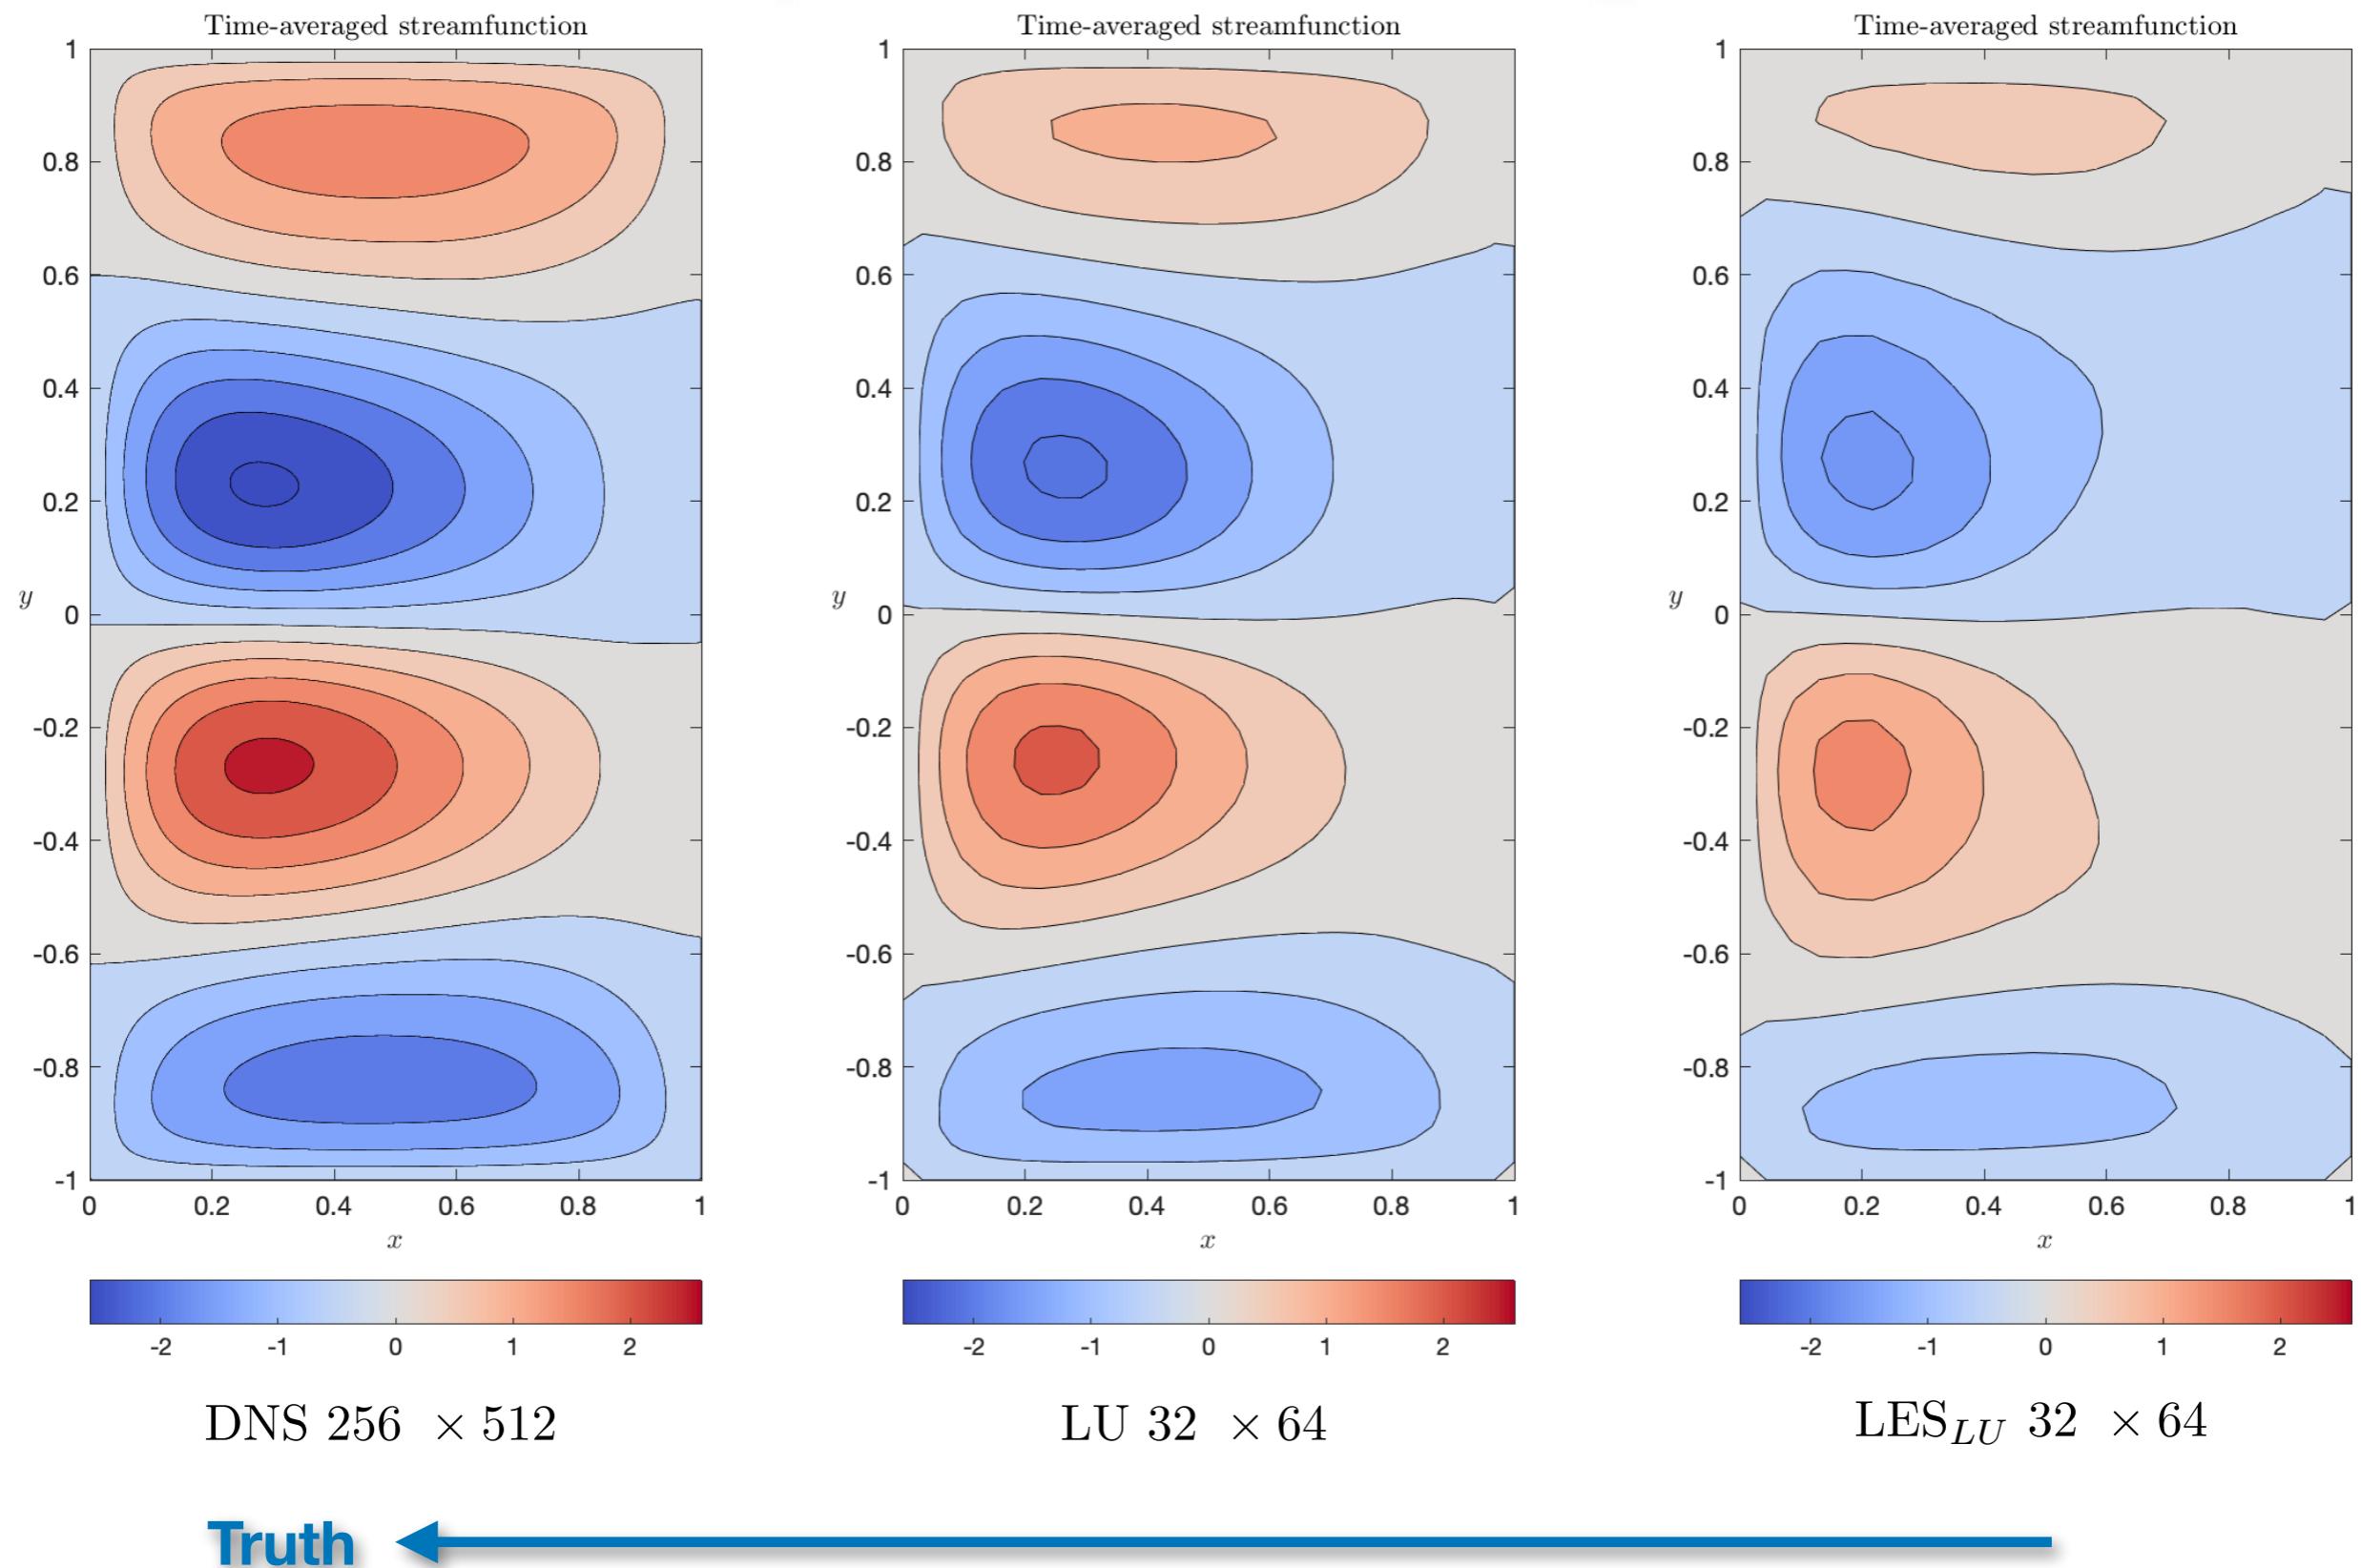

Time-statistics of wind-driven circulation

DNS 256×512 with $Re = 450$ and $Ro = 0.0016$

Time–statistics of wind–driven circulation

Outline

1 Governing Equations

- Location Uncertainty Principles
- Barotropic Quasi–Geostrophic Model under LU

2 Experimental Evaluations

- Structure–preserving of Rossby wave
- Ensemble forecasting verification of SQG_{MU}
- Time–statistics of wind–driven circulation

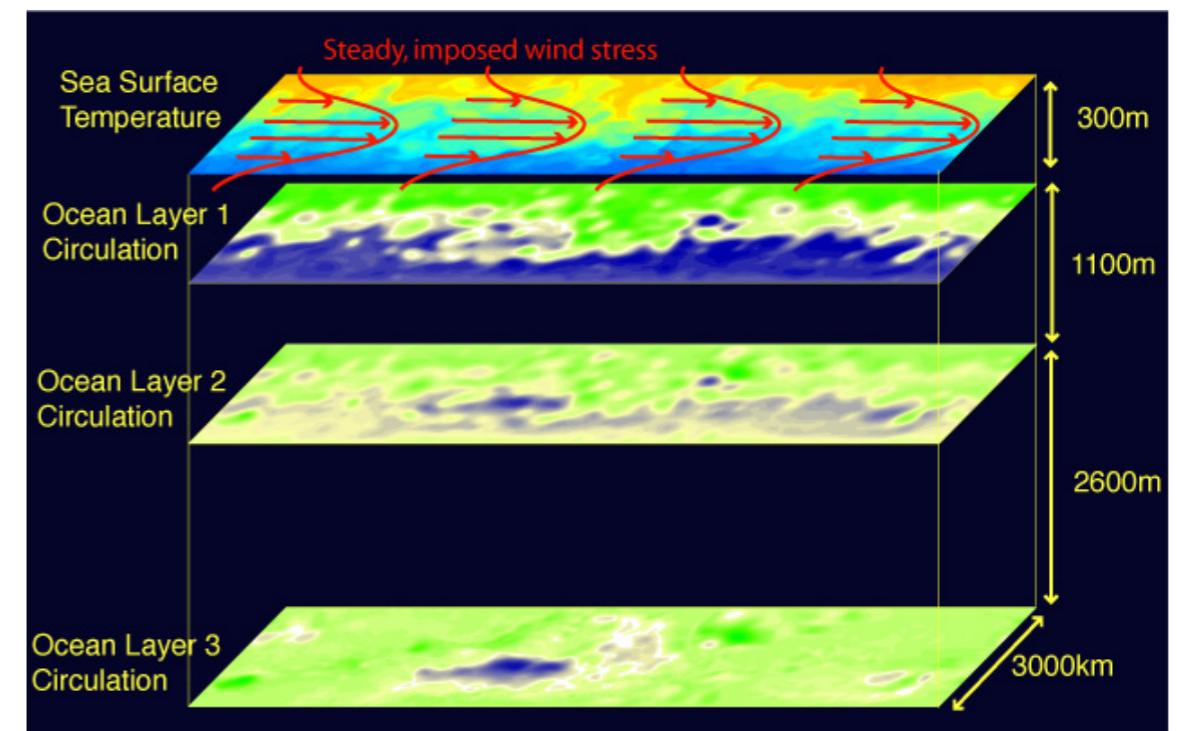

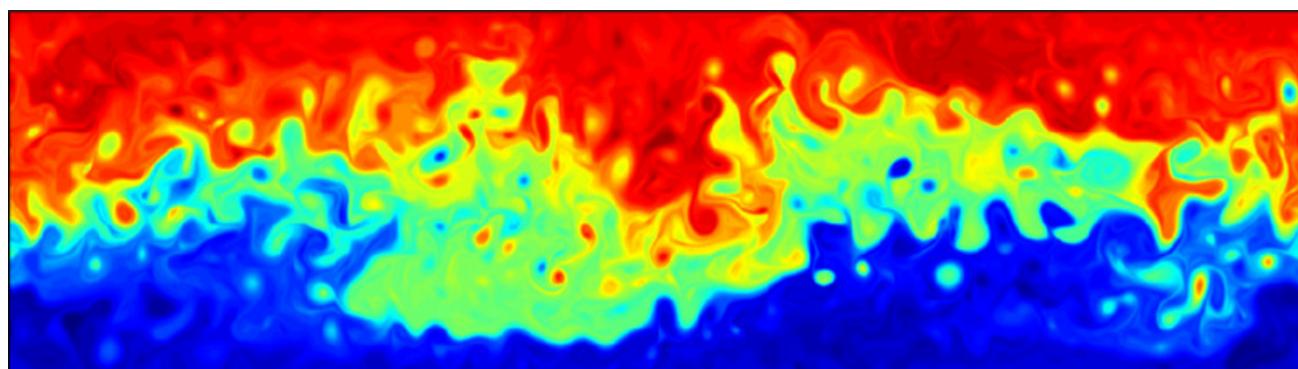

3 Summary

- **A consistent stochastic model :**

- Physical conservation laws satisfied
- Better ensemble spread represented
- Time-averaged profile well described on coarse mesh

- **Future works :**

- Multi-layers QG model under LU
(Q-GCM Projects : Hogg et al. 2003)

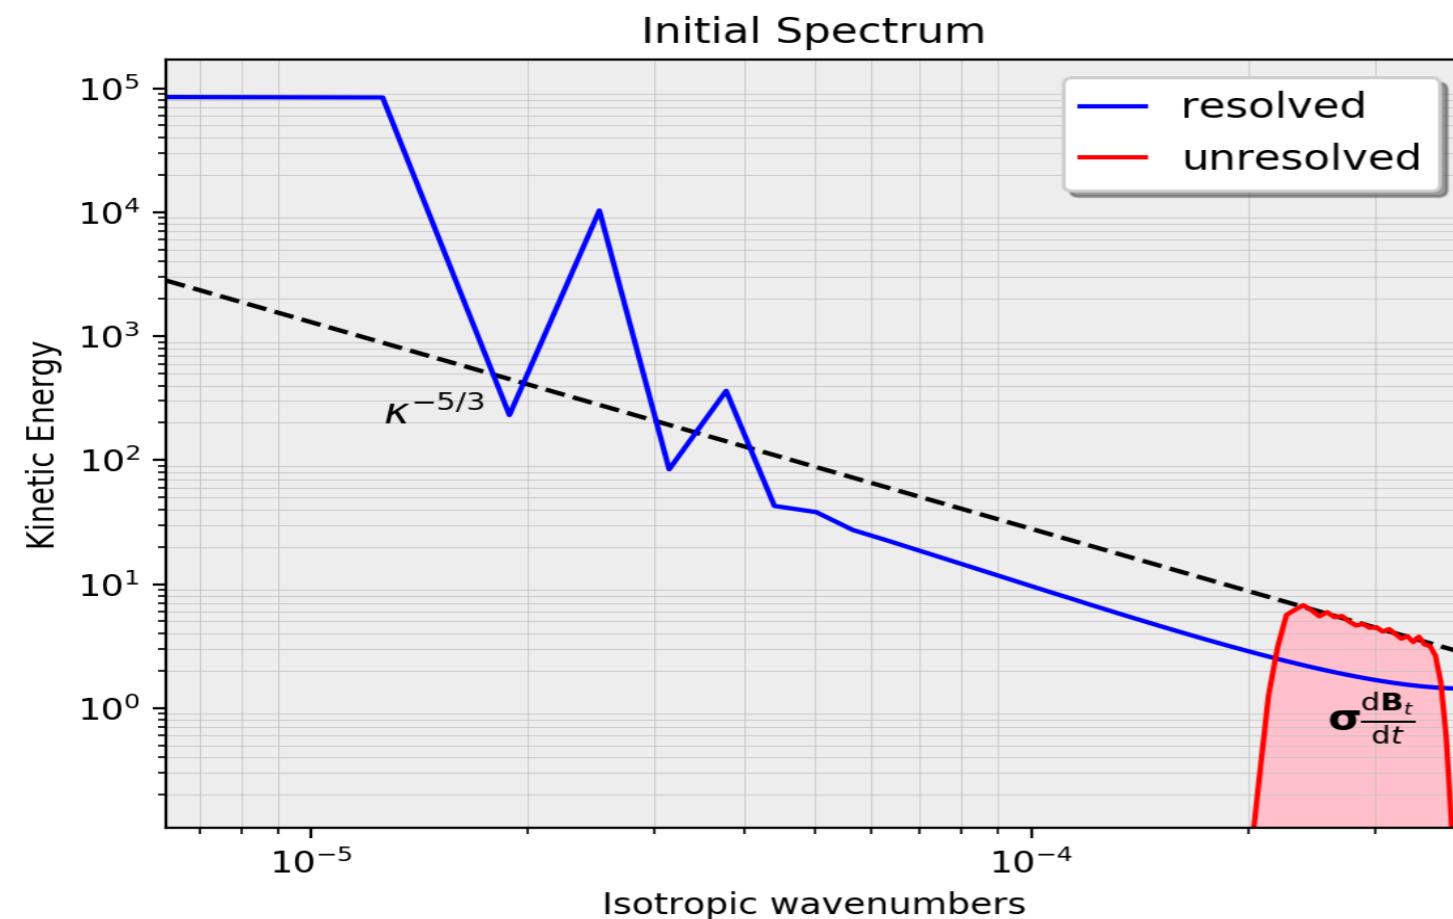

- Data Assimilation with Particle Filters

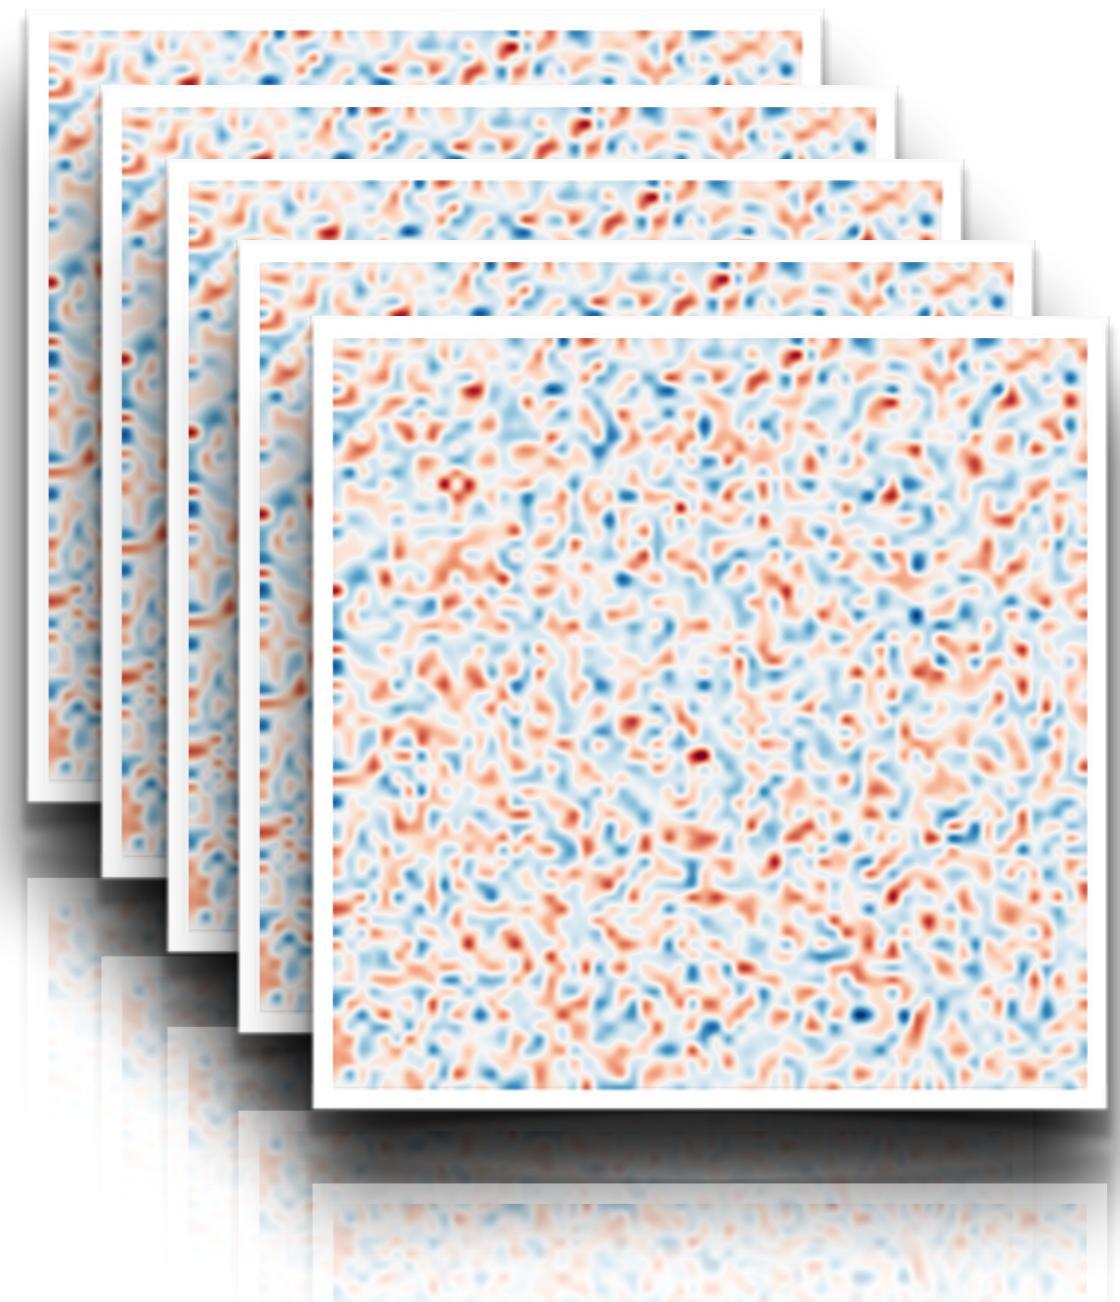

(Cotter et al. 2018)

Thanks for Your Attention !

Homogeneous parameterization

Ensemble of random stream functions

low-pass band filter \star white noise

Heterogeneous parameterization
