IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the first World Computer Congress held in Paris the previous year. A federation for societies working in information processing, IFIP's aim is two-fold: to support information processing in the countries of its members and to encourage technology transfer to developing nations. As its mission statement clearly states:

IFIP is the global non-profit federation of societies of ICT professionals that aims at achieving a worldwide professional and socially responsible development and application of information and communication technologies.

IFIP is a non-profit-making organization, run almost solely by 2500 volunteers. It operates through a number of technical committees and working groups, which organize events and publications. IFIP's events range from large international open conferences to working conferences and local seminars.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is generally smaller and occasionally by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is also rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

IFIP distinguishes three types of institutional membership: Country Representative Members, Members at Large, and Associate Members. The type of organization that can apply for membership is a wide variety and includes national or international societies of individual computer scientists/ICT professionals, associations or federations of such societies, government institutions/government related organizations, national or international research institutes or consortia, universities, academies of sciences, companies, national or international associations or federations of companies.

Preface

The year 2021 was marked by the worsening of the COVID-19 crisis restricting our social lives and freedom of movement, especially in the city of Curitiba, Brazil, where the 18th edition of the IFIP International Conference on Product Lifecycle Management (PLM 2021) was held. The industry has continued to be hard hit, with companies closing down, reduction of working hours, and restriction of borders altering the world's traditional activities. On the other hand, this crisis has provoked conceptual changes in the search for innovative solutions, making society adapt to the new work model that has been mostly performed in a virtual way.

However, it was not by chance that this was possible. On the contrary, it was the result of continuous research and development during the last decade and, in part, of efforts to contribute to state-of-the-art research questions involving issues of green and blue technologies to support smart and sustainable organizations in the digital age. Since 2003, the IFIP WG 5.1 International Conference on Product Lifecycle Management (PLM) has brought together researchers, developers, and users of PLM. This event has always aimed to integrate business approaches to the creation, management, sustainability, and dissemination of product and process data in companies that create, manufacture, and operate engineered products and systems. In this context, approaches such as digital and virtual product development, digital twins, smart manufacturing, or artificial intelligence in a sustainability context were discussed and developed further. While these sustainability concepts seemed vague and visionary at first, the contributions from this year's edition clearly showed that these innovative concepts have maturity and are being addressed and implemented with relative success in industry. Virtual collaboration, agile and green supply chains, intelligent manufacturing, and interoperability of work are becoming of paramount importance for worldwide technological development. PLM systems based on cloud and web service technologies, oriented to the purposes of sustainable development and combined with Internet of Things (IoT) platforms, seem to be actors promoting smart or intelligent solutions for products, processes, and decisions.

PLM 2021 was organized by the Industrial and Systems Engineering Graduate Program of the Pontifical Catholic University of Paraná, Brazil. So, this edition was concerned with responses to environmental and energy crises involving and considering green and blue issues. The health crisis has been added to these issues, demonstrating the need to change industry practices at the heart of PLM's concerns.

Due to the continuing global impact of COVID-19, the conference was held for the second time in its history in a virtual edition (like the PLM 2020 conference in Rapperswil, Switzerland).

PLM 2021 was attended by 97 researchers from 22 nations across three special sessions (PLM Maturity, PLM Implementation and Adoption within Industry 4.0; Sustainability, Sustainable Development and Circular Economy; and Blockchain Integration with Enterprise Applications) and 22 parallel sessions with a total of 100

online presentations. PLM 2021 also included the following academic keynotes, industrial keynotes and open webinars:

i) Academic Keynotes

- Andreia Malucelli – Pontifical Catholic University of Paraná, Brazil;
- Luiz Marcio Spinosa – Fundação Araucária, Brazil;
- Robert Young – Loughborough University, UK;
- Rodrigo Lozano – University of Gävle, Sweden;
- Cecilia M. V. B. Almeida – Universidade Paulista and the Journal of Cleaner Production and Cleaner and Responsible Consumption, Brazil;
- Ubiratã Tortato – Pontifical Catholic University of Paraná, Brazil;
- Elias Hans Dener Ribeiro da Silva – University of Southern Denmark, Denmark;
- Marcelo Távora Mira – Pontifical Catholic University of Paraná, Brazil.

ii) Industrial Keynotes

- Domingo Ureña Raso – Mecanizados Y Montajes Aeronáuticos, Spain;
- Regis Ataides – Siemens Digital Twins, Brazil.

iii) Open Webinars

- David Berquelange – Renault, France;
- Renato Grottoli – Robert Bosch, Brazil;
- Alex Rogério Figueiredo – Volvo, Brazil.

The pre-conference program featured a virtual PhD workshop dedicated to young researchers. The main program was structured so that on each day of the conference we had at least one academic keynote, industrial keynote, and open industry webinar, freely accessible to all, followed by intense discussions with researchers and industry participants.

All submitted papers were reviewed in a blind review process by at least two reviewers (2.4 reviewers per paper, on average). In total, 133 full papers were submitted, of which 107 were accepted to be presented at the conference. The accepted papers are grouped into 25 thematic sections in this book, which is part of the IFIP Advances in Information and Communication Technology (AICT) series that publishes state-of-the-art results in the sciences and technologies of information and communication. In addition to this conference proceedings, the International Journal of Product Lifecycle Management (IJPLM) is the official journal of the IFIP WG 5.1. Selected papers from PLM 2021 might be published as extended versions in IJPLM.

We would like to thank everyone who directly or indirectly contributed to making the PLM 2021 conference a success, particularly under the difficult circumstances of the worsening COVID-19 pandemic.

Contents – Part II

Lean, Design and Innovation Technologies

From Smart Connected Products to Systems of Systems: Case Study and Archetypes	3
<i>Manuel Holler, Christian Dremel, Benjamin van Giffen, and Helen Vogt</i>	
Procedure for the Creation of Complex Free-Form Human Bones Surfaces for Manufacturing of Personalized Implants	14
<i>Nikola Vitkovic, Miroslav Trajanovic, Miodrag Manic, Nikola Korunovic, Ljiljana Radovic, and Razvan Pacurar</i>	
Identifying the Trend of Research on Mechatronic Projects	25
<i>Ruben Dario Solarte Bolaños, Antonio Carlos Valdiero, Luiz Antônio Rasia, and João Carlos Espindola Ferreira</i>	
Can Proactive Obsolescence Management and Innovation Go Hand in Hand During the Conceptual Design Phase of Complex Systems?	40
<i>Sophia Salas Cordero, Rob Vingerhoeds, Claude Baron, and Marc Zolghadri</i>	
Toyota Kata Patterns to Help Teach Process Design: Applying a Project-Based Learning Model	55
<i>Danilo Ribamar Sá Ribeiro, Fernando Antônio Forcellini, and Milton Pereira</i>	
A Knowledge Management Approach to Support Concurrent Engineering in Wiring Harness Development	68
<i>Kevin Eder, Onur Tas, Uwe Zielbauer, and Kristin Paetzold</i>	
From Dispersed Knowledge to Ontology: A Proposal for Formalizing and Integrating 4D Printing in Design	80
<i>Saoussen Dimassi, Frédéric Demoly, Christophe Cruz, and Samuel Gomes</i>	
Modelling of Engineering and Manufacturing Data Structures Through a DSM-Based Approach	96
<i>Yana Brovar, Yaroslav Menshenin, Dominik Knoll, and Clement Fortin</i>	

Information Technology Models and Systems Implementations

Application of the BMSA Model in an Engineering Office.	113
<i>Núbia S. B. Brandão and Antonio Batocchio</i>	

Investigating the Effectiveness of a Causal MBSE Software Tool in Modelling CubeSat Conceptual Design Data.	128
<i>Stephen Peters, Clément Fortin, and Grant McSorley</i>	
Store Price Image Formation in the Consumer’s Mind: A Proposed Theoretical Model.	143
<i>Ana Paula Graciola, Fernanda Rizzon, Deonir De Toni, Gabriel Sperandio Milan, and Luciene Eberle</i>	
Multi-interfaces Entity Model for Summative Risk Management of Medical Products.	157
<i>Roberto Antonio Riascos Castaneda, Tomislava Majić, Egon Ostrosi, Jean-Claude Sagot, and Josip Stjepandić</i>	
Building Information Modelling Supporting Safety and Security Threats Management: A Literature Review	171
<i>Mauro Botrugno, Ada Malagnino, Mariangela Lazoi, and Mattia Mangia</i>	
Implementation of a Product Lifecycle Management System for Biomedical Research	185
<i>Amel Raboudi, Pierre-Yves Hervé, Marianne Allanic, Daniel Balvay, Roberto Duarte, Ismael Bakayako, Thomas Viel, Anais Certain, Thulaciga Yoganathan, Philippe Boutinaud, Alexandre Durupt, Bertrand Tavitian, and Benoît Eynard</i>	
Application of Engine Intelligent Start-Stop System Technology for Heavy Vehicle Fuel Saving	200
<i>Matheus Henrique Kupka Romano, Thiago Tavares Zanotto, Silvio Cesar de Lima Nogueira, and Anderson Luis Szejka</i>	
Analytical Detection of a Mesh Vertex Being on the Inside of a Round Through-Hole.	215
<i>Alexander Smirnov, Nikolay Shilov, Andrew Ponomarev, Thilo Streichert, Silvia Gramling, and Thomas Streich</i>	
A Graph-Based Knowledge Model for Value-Oriented PLM Implementation.	225
<i>Bas Koomen, Marcel de Klein, and Mayke Vergouwen</i>	
Digitalization of the Engineering Supported by System Lifecycle Management (SysLM).	240
<i>Martin Eigner and Mona Tafvizi Zavareh</i>	

Classification Approaches and Education

Enhancing Product Test Management by Using Digital Twins for Device Under Test Analysis	257
<i>Philipp Savarino and Thomas Dickopf</i>	
Classifying Data Mapping Techniques to Facilitate the Digital Thread and Smart Manufacturing	272
<i>Laetitia V. Monnier, William Z. Bernstein, and Sebti Fougou</i>	
TimeStacking: An Improved Ensemble Learning Method for Continuous Time Series Classification	284
<i>Victor Henrique Alves Ribeiro and Gilberto Reynoso-Meza</i>	
Adapting Products for Elderly: Generic Design Taxonomies	297
<i>Neha Yaragatti and Ravi Kumar Gupta</i>	
A Comparative Study on the Use and Interpretation of Annotated 3D Models	313
<i>Jiwei Zhou, Jorge D. Camba, and Travis Fuerst</i>	
3D Printer: An Application in Teaching	327
<i>Antonio Batocchio, Samuel Santos Silva, Matheus Franco, and Vinicius L. F. Minatogawa</i>	
Foregrounding Pedagogy in PLM Implementations in Higher Education: A Case Study from the UK	341
<i>Jo Conlon</i>	
Open-Source IoT Lab for Fully Remote Teaching	353
<i>Emiliano Traini, Ahmed Awouda, Mansur Asranov, and Paolo Chiabert</i>	

Manufacturing Models, Technologies and Services

A Broker-Based Manufacturing Supply Chain Integration with Blockchain: Managing Odoos Workflows Using Hyperledger Fabric Smart Contracts	371
<i>Abdelhak Belhi, Housseem Gasmı, Assam Hammi, Abdelaziz Bouras, Belaid Aouni, and Ibrahim Khalil</i>	
Systematic Steps Towards Concept Design of Pay-per-X Business Models: An Exploratory Research	386
<i>Karan Menon, Sameer Mittal, Hannu Kärkkäinen, and Olli Kuismanen</i>	
Metamodels Approach Supporting Models for Manufacturing (MfM) Methodology	398
<i>Domingo Morales-Palma, Manuel Oliva, Jesus Racero, Ignacio Eguia, Rebeca Arista, and Fernando Mas</i>	

The Value Stream Hierarchical Model: A Practical Tool to Apply the Lean Thinking Concepts at All the Firms' Levels	410
<i>Francesco Serio, Juliano Endrigo Sordan, and Paolo Chiabert</i>	
Towards Knowledge-Based System to Support Smart Manufacturing Processes in Aerospace Industry Based on Models for Manufacturing (MfM)	425
<i>Anderson Luis Szejka, Fernando Mas, and Osiris Canciglieri Junior</i>	
Deploying Strategies with Integrated Events in a Home Appliance Manufacturer: Application of FMEA Through Toyota Kata	438
<i>Fausto Estevão Zanatta and João Carlos Espindola Ferreira</i>	
Integrating Manufacturing in Product Development Process: A Propose of a Method Based in Lean Startup Approach	456
<i>Pollyanna Amanda Fick Gehm Denzin Zenkner and Fernando Antônio Forcellini</i>	
Use of Full Factorial Design in the Manufacture of Ceramic Materials Using Foundry Sand	469
<i>Ana Beatriz Souto Perry and Nice Mika Sakamoto Kaminari</i>	
Initiating an Industrial Machinery Producer to Digital Servitization: A Case Study	483
<i>Claudio Sassanelli, Anna de Carolis, and Sergio Terzi</i>	
Author Index	495

Contents – Part I

Sustainability, Sustainable Development, Circular Economy and Information Technologies and Services

Impacts of the Sustainable Automotive Chain: Faced with the Perspective of Electromobility in Consolidated Markets in Germany, United States and Japan.	3
<i>Edson Luiz Haluch, Osiris Canciglieri Júnior, and Carlos Alberto Cioce Sampaio</i>	
A Comparative Study on Material Selection for Designing an Electric Last Mile Vehicle for Parcel Delivery.	15
<i>J. Carlos Rodriguez-Tenorio, Vicente Borja, Arturo Treviño Arizmendi, and Alejandro C. Ramírez-Reivich</i>	
Methodology for Commodity Cost Estimation Through Production Line Analysis and Simulation	28
<i>Alberto Faveto, Francesco Serio, Vincenzo Lunetto, and Paolo Chiabert</i>	
Conceptual Design Methodology for Knitted Fabrics.	44
<i>Carla Estorilio, Ronaldo Rodrigues, Ariana Fagan, and Carlos Cziulik</i>	
Management of Laser-Cut Sheet-Metal Part Using Collaborative Robots	59
<i>Paolo Chiabert and Khurshid Aliev</i>	
Financial Assistance in a Capital-Constrained Cellphone Supply Chain	74
<i>Song-Man Wu, Felix T. S. Chan, and S. H. Chung</i>	
Analysis and Modeling the Intersection of Design for X Techniques, Business Strategies and Product Life-Cycle Management	84
<i>Abla Chaouni Benabdellah, Kamar Zekhnini, Imane Bouhaddou, and Asmaa Benghabrit</i>	
Methodology to Enhance the Lifetime of Mechanical System by Utilizing Parametric Accelerated Life Testing	100
<i>Seong-woo Woo, Dennis L. O’Neal, and Yimer Mohammed</i>	
Sustainable Software Engineering: An Empirical Study of the Brazilian Financial Sector	115
<i>Ana Carolina Moises de Souza, Sheila Reinehr, and Andreia Malucelli</i>	

Green and Blue Technologies

Digital Management of Large Building Stocks: BIM and GIS Integration-Based Systems	133
<i>Mattia Mangia, Mariangela Lazoi, and Giovanna Mangialardi</i>	
Requirements and Barriers in the Process of Food Export from Brazil to Europe	151
<i>Ligia Franzosi and Carla Estorilio</i>	
Managing New Product Development in the Fashion Industry with PLM: Based on Market Classifications	167
<i>Brendan Patrick Sullivan, Monica Rossi, Sameer Athavale, Virginia Fani, Bianca Bindi, Luca Ferraris, Romeo Bandinelli, and Sergio Terzi</i>	
The Repurchase Intention of Organic Food: Comparison Between a Theoretical and a Nested Model	179
<i>Luciene Eberle, Gabriel Sperandio Milan, Felipe De Farias, Ana Paula Graciola, and Suélen Beber</i>	
Resilient Sustainable Supplier Selection Criteria Assessment for Economics Enhancement in Industry 4.0 Context	194
<i>Ghita Chaouni Benabdellah, Karim Bennis, Abla Chaouni Benabdellah, and Kamar Zekhnini</i>	
Selection of Abandoned Areas for Implantation of Solar Energy Projects Using Artificial Neural Networks	209
<i>David Gabriel de Barros Franco and Maria Teresinha Arns Steiner</i>	
AI and Blockchain Integration with Enterprise Applications	
Barriers of Blockchain Technology Adoption in Viable Digital Supply Chain	225
<i>Kamar Zekhnini, Anass Cherrafi, Imane Bouhaddou, Abla Chaouni Benabdellah, and Rakesh Raut</i>	
Data-Driven Framework for Electrode Wear Prediction in Resistance Spot Welding	239
<i>Luigi Panza, Giulia Bruno, Manuela De Maddis, Franco Lombardi, Pasquale Russo Spena, and Emiliano Traini</i>	
Anomaly Detection in Blockchain-Enabled Supply Chain: An Ontological Approach	253
<i>Tahani Abu Musa and Abdelaziz Bouras</i>	

InnoCrowd, An AI Based Optimization of a Crowdsourced Product Development	267
