HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Mission statement

Clinica is an open-source software platform for neuroimaging studies. It is designed to help researchers spend less time on data management and processing, easily share data and results, make their research more reproducible and contribute to Open Science.

Target audience

- Neuroscientists or clinicians conducting clinical neuroscience studies involving multimodal imaging.
- Researchers developing advanced machine learning algorithms.

Overview of Clinica

@clinica_run

Example: processing from unorganized neuroimaging data to Pytorch tensors using Clinica and ClinicaDL

Work in progress and future works

Quality control: Explore methods and processes to provide quality control feedback

Pipelines: Development of new longitudinal pipelines

Clinica: Development of a web-based dashboard for pipeline monitoring and quality control

Provenance: Adherence to the BIDS provenance standard to improve traceability and reproducibility
