Neuroimaging data sharing with FLI-IAM

Camille Maumet, Michel Dojat

► **To cite this version:**

Camille Maumet, Michel Dojat. Neuroimaging data sharing with FLI-IAM. EBRAINS 2024 - First workshop of EBRAINS-France, Oct 2024, Marseille, France. 2024. hal-04736937

HAL Id: hal-04736937

<https://inria.hal.science/hal-04736937v1>

Submitted on 15 Oct 2024

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Towards federated European neuroimaging data sharing?

France Life Imaging

National Infrastructure for medical imaging in
biology and health

Manager: Régine Trébossen

regine.trebossen@cea.fr

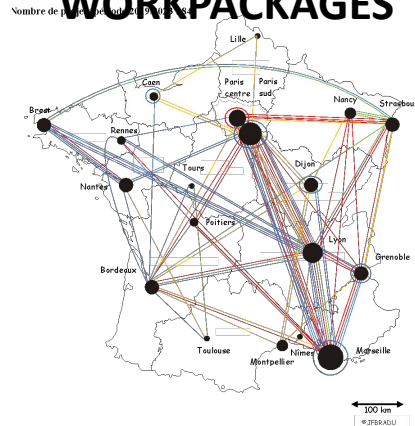

www.francelifeimaging.fr

Network of 9 regional HUBS covering the main platforms (160 imaging equipments)

4 networks of expertise in scientific domains + 1 education:

WORKPACKAGES

- 1 : Molecular imaging agents
 - 2 : Instrumentation & innovative technologies
 - 3 : Interventionnal imaging
 - 4 : Image processing
- Training network

A distributed HUB in data processing: IAM (Information Analysis & Management)

Scientific managers

Technical manager

Sharing

FLI-IAM: A dedicated infrastructure for ...

- Storage for produced imaging data
 - Raw data
 - Processed data
 - Analysis results
 + Physiological data, eye-tracking, neuropsychology test ...
- Image processing pipelines
 - to compose & execute
- Valorisation : to Expose & Share
- Reinforced needs
 - tracing
 - machine learning
 - open data

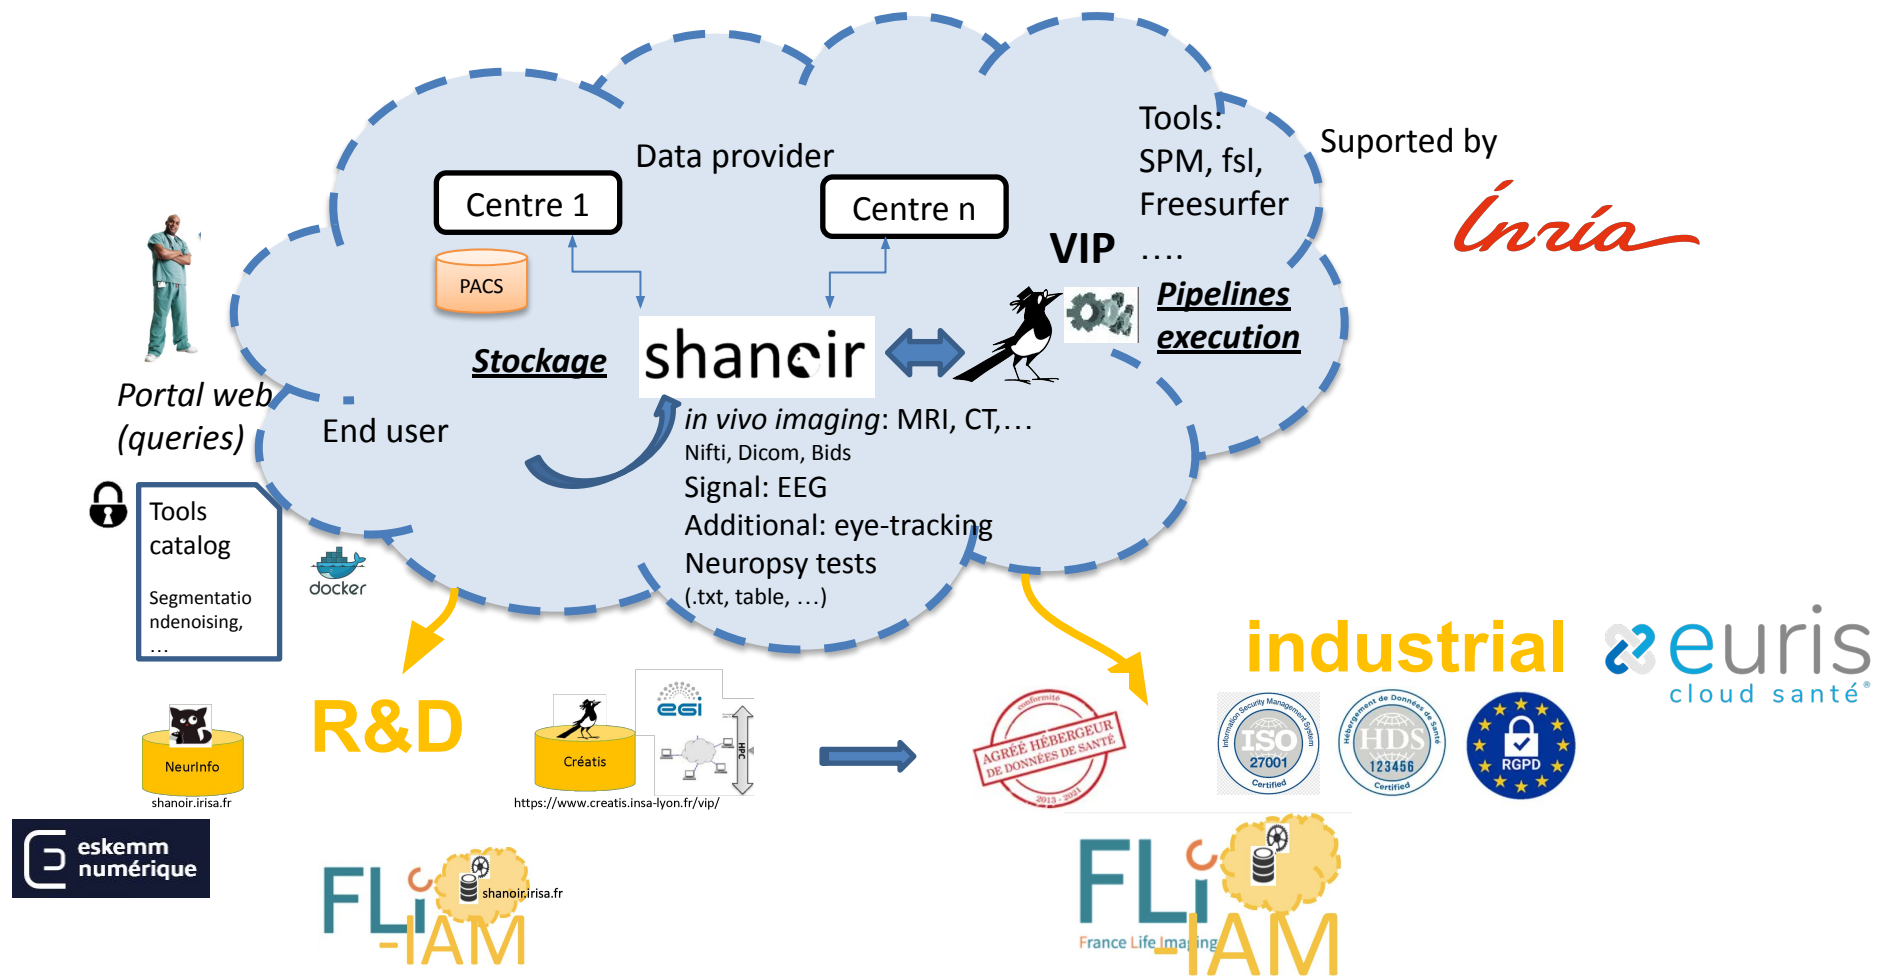

32 % Clinical studies

63 % Preclinical studies

Cloud-based Architecture

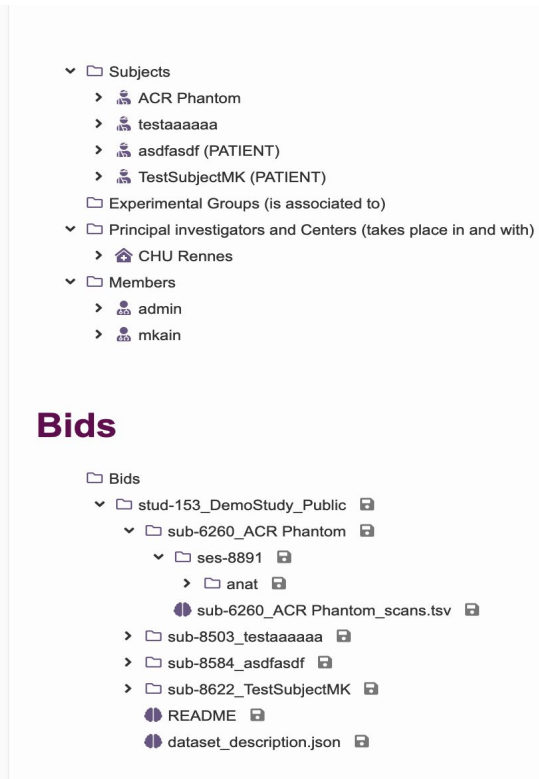

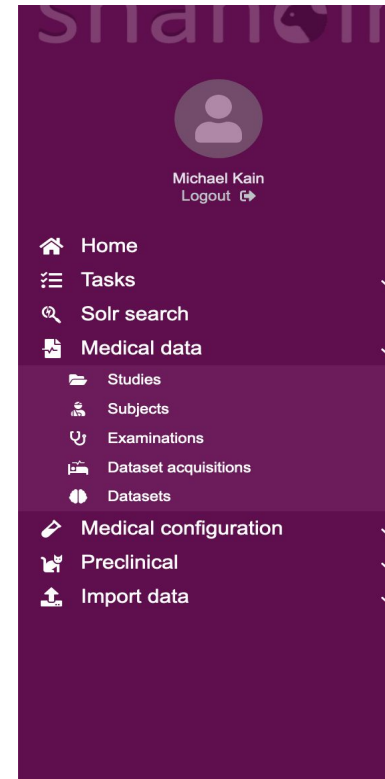

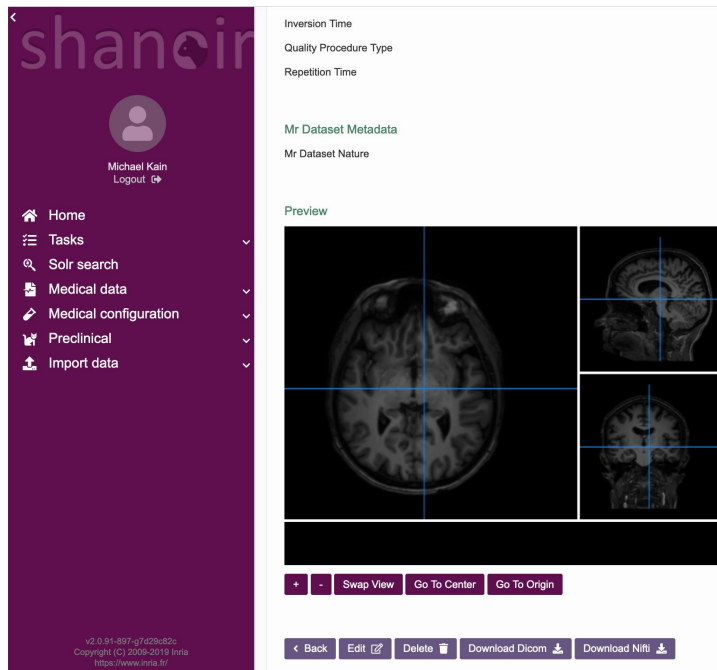

Two main components: 1/2

shanoir

<https://project.inria.fr/shanoir/>

- Developed since 2003
- Store & Share pseudo-anonymized data
- Use an specific ontology (Ontoneurolog)
- DUA associated to each study
- Dicom, nifti, bids
- Used in various large multicentre projects

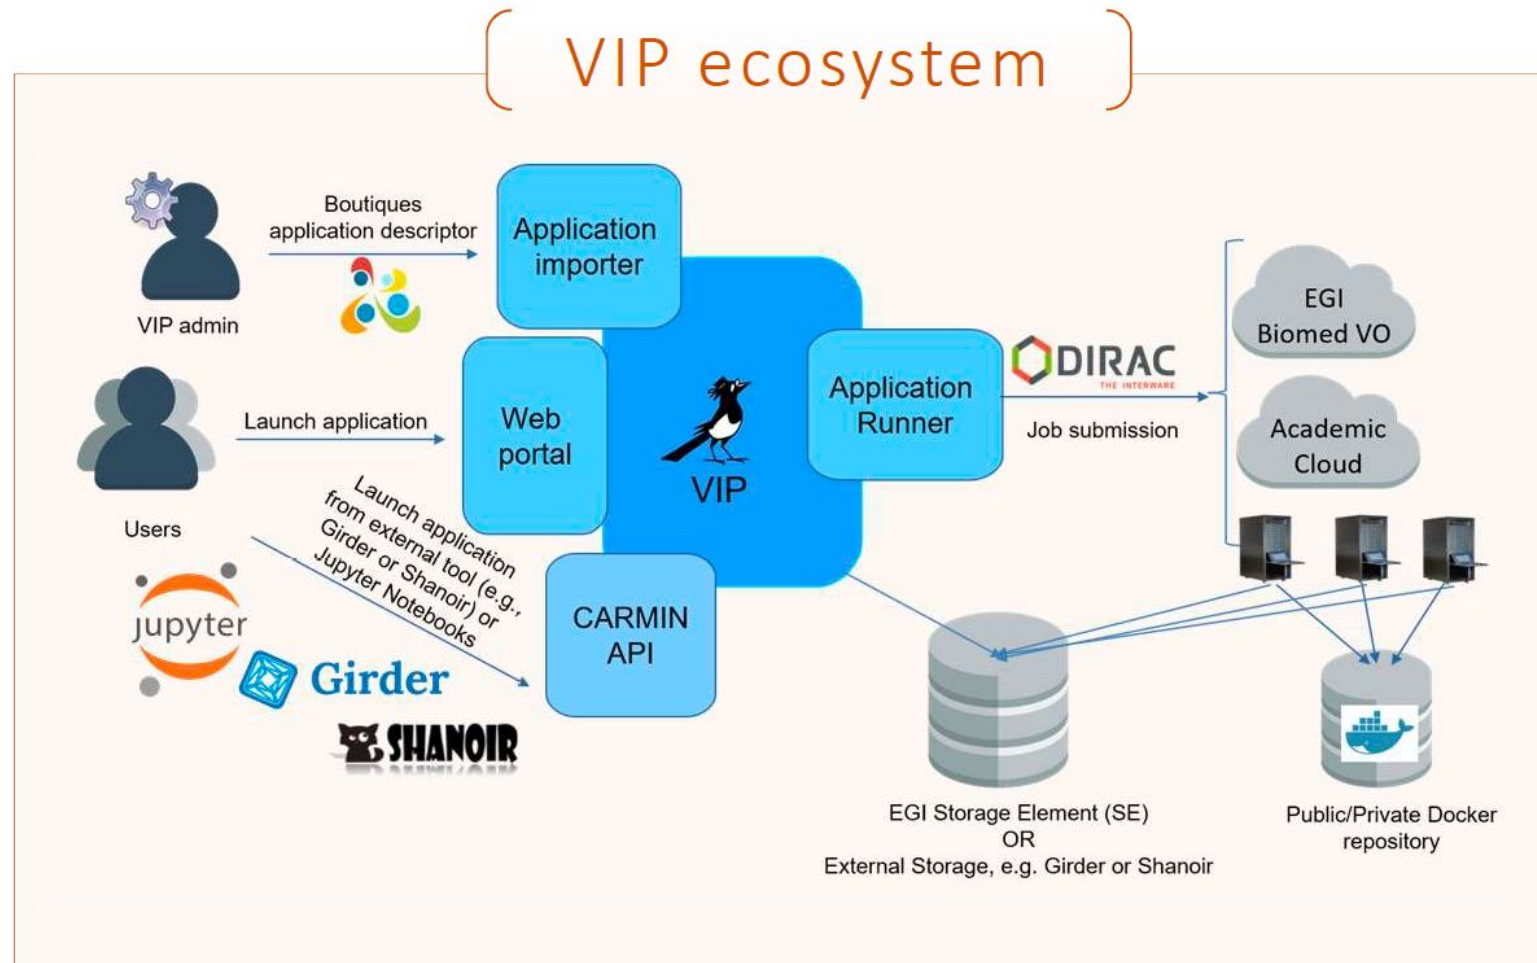

For clinical and preclinical imaging data

Virtual Imaging Platform (VIP)

<https://vip.creatis.insa-lyon.fr>

Sorina Pop

- *Visibility*
 - to Provide a web portal to **FIND and ACCESS** data & processing tools
- *Diffusion*
 - to Facilitate compliance to ethical & law rules for data **REUSE & SHARING** (“as open as possible, as restricted as necessary”)
 - to Provide a data management plan (ISO)
 - to Renforce databases **INTER-OPERABILITY** (FBI, genetics, ...)
- *Valorisation*
 - Referencing data and imaging processing tools (DOI)
- *Scientific motivations*
 - Challenges organisation (validation, performances, ...)
 - Multicenter studies (Statistical robustness, reproducibility, ...)
 - 3R policy (Reduce, Raffine, Replace)

OBJECTIVES-II

- To be a national and european actor for the management of *digital commons*:
imaging *in vivo* (**FAIR**) data

Commowick, O. et al. Nature Scientific Reports, 2018

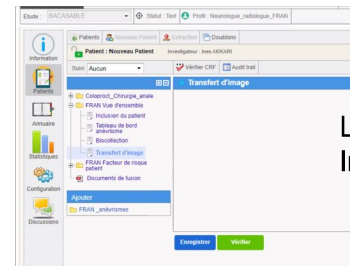

Challenges organisation

Integrated to clinical digital environnement

French national medical registers

Stratégie nationale pour l'intelligence artificielle

Link to Imagerie *in vivo*

Data User Agreement

Signed by researchers

"[...] I will **not** attempt to [...] retrieve the identity of the study participants."

MSSEG-2

Access to OFSEP MRI used for the MICCAI 2021 challenge

March 2021

I request access to the data collected in the digital repository of the OFSEP cohort provided in the context of the MICCAI 2021 challenge.

By accessing this agreement, I become the data controller (as defined under the European GDPR) of the data that I have access to, and I am responsible that I access these data under the GDPR obligations and the specific following terms:

- I will comply with all relevant risks and regulations imposed by my institution and my government. This agreement never has precedence over existing general data protection regulations that are applicable in my country.
- I will not attempt to establish or retrieve the identity of the study participants. I will not link these data to any other database in a way that could provide identifying information. I will not request the pseudonymization key that would link these data to an individual's personal information, nor will I accept any additional information about individual participants under this Data User Agreement.
- I will not redistribute these data or share access to these data with others, unless they have independently acquired and been granted access to these data, i.e., signed this Data User Agreement. This includes individuals in my institution.
- When sharing secondary or derivative data (e.g. group statistical maps, lesion masks or templates), I will only do so if they are on a group level, and information from individual participants cannot be deduced.
- I will reference the specific source of the accessed data when publicly presenting my results or algorithms that benefited from their use. (All Papers, book chapters, books, posters, and presentations) and all public presentations of results, including from my own institution.

[Download the dsa file DUA-OFSEP_MRI_Data_Access_Agreement_MICCAI_2021.pdf](#)

I have read the data user agreement contract for the study MSSEG-2 and I fully accept it.

[Accept](#)

3- Access the data

A research infrastructure service for brain research?

Destination INFRA-SERV: Research infrastructures services to support health research, accelerate the green transition and the digital transformation, and advance frontier knowledge

Objective:

- To provide access to broad portfolios of installations and scientific services relevant for a large research domain or in support of societal challenge and EU priorities

Expected impact:

- Effective access of European researchers to the best research infrastructure services from national and pan-European research infrastructures
- Improved research infrastructure services to address evolving scientific and societal challenges
- Further opening of national research infrastructures and strengthened access programmes of pan-European research infrastructures in the longer term
- Improved transnational access to new users

Topic ID	Topic title	Type of Action	Expected number of GAs	Expected EU contribution per GA M€	Budget M€
HORIZON-INFRA-2025-01-SERV-01	Research infrastructure services to enable R&I addressing main challenges and EU priorities related to the health domain	RIA	4	5-12	37.0

Destination INFRASERV: Proposed topics (1)

Research infrastructure services to enable R&I addressing main challenges and EU priorities related to the health domain

1. Support research and development of medical countermeasures for epidemic response;
2. Improve clinical research in the paediatric area;
3. Enable research linking environmental factors to human health;
4. Access to novel radionuclides and facilities

Research infrastructure services to enable R&I addressing main challenges and EU priorities

1. For advanced biotechnology and biomanufacturing;
2. To improve the understanding and prediction of future climate changes and their impact.

Note: (both challenge-driven topics) less limited about improving & developing new services, including, when duly justified, if they cannot be offered by the end of the action.

Destination INFRASERV: Proposed topics (1)

Research infrastructure services to enable R&I addressing main challenges and EU priorities related to the health domain

1. Support research and development of medical countermeasures for epidemic response;
2. Improve clinical research in the paediatric area;
