Submitted on 26 Sep 2006

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

F Implementation of ITERATOR for LINKED_LISTS.

```
class ITERATOR_ON_LINKED_LIST[E] inherit ITERATOR[E];
creation make
feature {NONE}
  linked_list: LINKED_LIST[E]; -- The list to traverse.
  current_link: LINK[E]; -- Memorize the current item position.
feature
  make(ll: LINKED_LIST[E]) is
    require
      ll /= Void
    do
      linked_list := ll;
      current_link := linked_list.first_link;
    ensure
      linked_list = ll
    end;
  start is
    do current_link := linked_list.first_link; end;
  is_off: BOOLEAN is
    do Result := current_link = Void; end;
  item: E is
    do Result := current_link.item; end;
  next is
    do current_link := current_link.next; end;
end
```
