**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Bibliographic references

- **Definition**
  - Citations mentioned at the end of scientific publications
  - One of the structural elements of a standard scientific article that can be used for analysis

This might also increase the efficiency of the system.

# Citation vs Reference

- Its a difference of perspective between the author cited and the researcher citing the author
  - For the author citing :
    - ❖ It is a reference to the author cited
  - Inversely, for the author cited
    - ❖ it is a citation by the citing author
- **The INIST (Institute for Scientific and Technical Information)**
  - Engaged a research on these references because of the interest of the citations in the bibliometrics and scientometrics studies

# Bibliometrics

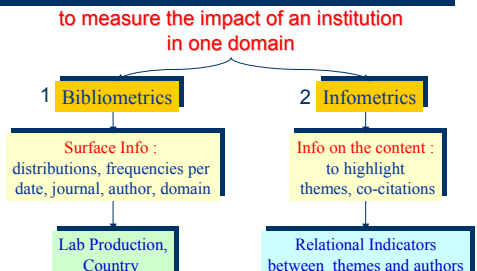

- **Before 1960**
  - Defined as quantitative research of every thing concerning the science and for which we can attach numbers
  - Used on PASCAL(INIST), MEDLINE(US), INSPEC(UK)
- **Defined by Pritchard, 1969 as**
  - The application of mathematics and statistical methods to :
    - ❖ books, articles and other communication means
  - It can be particularly applied to :
    - ❖ the study of the publishing of scientific papers considered as an indicator of the scientific activity

# Bibliometrics

- The creation on 1960 by Eugene Garfield Of the foundation of the Institute for Scientific Information (ISI)
  - Will give a new measure element : the citation
- **Used at first :**
  - Only as a tool for information retrieval
  - The citation has become an important criterion
    - ❖ because it allows to distinguish among different publications those which received the approbation of the scientific community
    - ❖ also used to appraise scientific journals especially with the impact factor calculated as the average number of citations a paper receives over a period of 2 years

## Two approaches

## Bibliometrics

### Example

- Nb of thesis / population
- Predominance of the Ile de France (Paris)
- Effects on the neighbor regions

## Bibliometrics

### Example

- Impact Index of the scientific publications in the E.U.
- Impact = average nb of references per article
- One remarks a continuous decreasing in France, i.e. French articles are less read and referenced
- Several possible causes...

## Bibliometrics at the INIST

### Institute for Scientific and Technical Information

- Has
  - A basis covering the most part of the scientific and technical research in the world
  - Two multilingual and multi-disciplinary data bases :
    - ❖ PASCAL and FRANCIS
- Aim
  - Automatic updating of these databases
  - To bring additional value to the bases by :
    - ❖ Bibliometrics : idea on the best themes and famous authors

## Data and Method

- The raw data, obtained by OCR :
  - Set of "well-formed" XML documents in which each reference from the same article is singled out
- Character set used : ISO-latin 1 (standard ISO 8859-1).

## Problems of several kinds

### Due to the digitisation

#### ■ Confusions :

- I→L, C →(, 8 →B...

## Problems of several kinds

### Due to the heterogeneity of the data

#### ■ Even though the model of the citation depends on the journal in which it is published

- The structure of a reference may vary greatly from one paper to another in the same journal

EVANS, W.H. Intercellular Communication. (1997). The Roles and Structure of Gap Junctions. In: Principles of **MedicalBiology**, JAI Press Inc., 609 - 628.

## Still, there are a few regularities

### Within the same paper, references have:

- Same structure: for the same type of quoted document
- Authors' names: in the beginning
- Date: very limited number of positions: after the authors, after the journal title, after the pagination
- Page number: at the end

# Structural Analysis

## ■ Syntactic analysis: limits:

- Some terms are unknown
- The title has a too complex structure
- Confusion between the publication year and the pagination

## ■ Proposed two kind of models:

- Inter-fields : searching for limits
- Intra-fields : confirmation of these limits

# Inter field modeling

- We used a pair modeling revealing the association of consecutive fields. This gives the sequence of possible consecutive fields with their separators

Tag 1	Tag 2	Percentage	Position	Simple separator	Double separator
AU	DA	97.83	1.00	(93)	X 2, (2
DA	TIP	56.52	1.96		) 56

## Intra field modeling

- Once obtained the field identity and limits, we try to find out the kind of elements used in the field and their structure in terms of sequence and separators
