HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

SCIENCE

A Waste of 1,000 Research Papers

Decades of early research on the genetics of depression were built on nonexistent foundations. How did that happen?

ED YONG MAY 17, 2019

SEAN NEL / SHUTTERSTOCK

In 1996, a group of European researchers found that a certain gene, called *SLC6A4*, might influence a person's risk of depression.

It was a blockbuster discovery at the time. The team found that a less active version of the gene was more common among 454 people who had mood disorders than in 570 who did not. In theory, anyone who had this particular gene variant could be at higher risk for depression, and that finding, they said, might help in diagnosing such disorders, assessing suicidal behavior, or even

Vibration effect

Why are middle-aged marathon runners faster than twentysomethings?

According to new data from the running app Strava, runners in their 40s are streets ahead of younger rivals

▲ 'Middle-aged runners outperform runners in the 20s ...' Photograph: FatCamera/Getty

According to data released by the running app Strava, middle-aged runners consistently average faster marathon times than their younger rivals, apparently defying the usual rules of athletic performance. Men in the 40-49 age bracket clock an average time of four hours and 17 minutes for a marathon, according to the recent figures. Women in the same age range typically come in at just under the five-hour mark.

Faster in their forties
than twenties?

Selection bias

POLICY & ETHICS | OPINION

Speech Recognition Tech Is Yet Another Example of Bias

Siri, Alexa and other programs sometimes have trouble with the accents and speech patterns of people from many underrepresented groups

By Claudia Lopez Lloreda on July 5, 2020

Credit: Getty Images

“Clow-dia,” I say once. Twice. A third time. Defeated, I say the Americanized version of my name: “Claw-dee-ah.” Finally, Siri recognizes it.

Having to adapt our way of speaking to interact with speech recognition technologies is a familiar experience for people whose first language is not English or who do not have conventionally American-sounding names. I have even stopped using Siri because of it.

Lack of diversity

Sample sizes in neuroimaging

2015 : 30 participants per study

We need **bigger, more representative and more diverse** samples

Brain standards by and for the community

INCF

enabling open and
FAIR neuroscience

Working Groups/Special Interest Groups

Special Interest Groups are composed of users and developers from across the INCF network working collaboratively to develop, refine, and/or implement community standards. Working Groups are composed of SIG members working on short-term funded projects that aim to achieve a concrete deliverable.

FAIR Metadata Working Group

The aim of this working group is the harmonization of Common Data Elements (CDEs) for data discovery and metadata annotation.
[Read more](#)

Neuroinformatics for cell types

This SIG will coordinate common efforts for defining and describing cell types across neuroscience, to reduce duplicate efforts and to improve interoperability and reuse of cell type-specific data collected across groups.
[Read more](#)

Reproducibility and Best Practices in Human Brain Imaging

The SIG aim is to collect, compile, synthesize and distribute information from task forces working on separate projects but with reproducibility in neuroimaging as an overarching theme.
[Read more](#)

Neuroimaging Quality Control (niQC)

This SIG aims to develop standards and best practices for quality control of neuroimaging data, including standardized protocols, easy to use tools and comprehensive manuals
[Read more](#)

Neuroinformatics for Aging

This SIG will be a community dedicated to the creation and application of neuroinformatics technologies to address clinical and wellness challenges in aging
[Read more](#)

Neuroshapes: Open SHACL schemas for FAIR neuroscience data

This SIG aims to coordinate community efforts for the development of open, use case driven and shared validatable data models (schemas, vocabularies) to enable the FAIR principles (Findable, Accessible, Interoperable and Reusable) for basic, computational and clinical neuroscience (meta)data.
[Read more](#)

Standardised Representations of Network Structures

This SIG deals with the various tools and formats for creating and sharing representations of biological neuronal networks, and will work towards ensuring these are as interoperable and usable as possible for computational neuroscientists.

Developing open science in our community

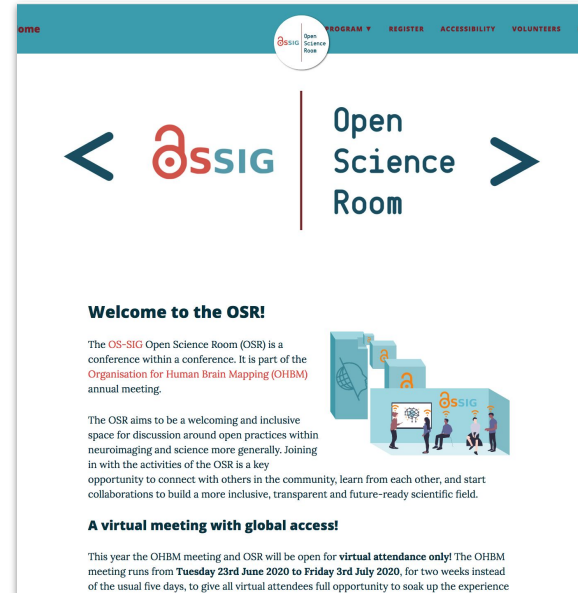

OHBM Open Science SIG

The screenshot shows the website for the OHBM Open Science SIG. At the top left is the logo, which consists of a stylized orange 'a' followed by 'SSIG' in blue. To the right of the logo is a navigation menu with the following items: 'Our Team', 'Hackathon', 'Awards', 'Open Science Room', and 'Sponsors'. The main content area features a large heading on the left: 'The OHBM Open Science Special Interest Group'. Below this heading is a sub-heading: 'Dedicated to promoting and supporting open science within our community'. Underneath the sub-heading is a blue button with the text 'Learn more'. On the right side of the main content area is an illustration of two people, a woman and a man, standing in front of a large whiteboard. The whiteboard is divided into a grid by black lines and is covered with various colored sticky notes (yellow, pink, blue, green). The woman is on the left, pointing at a sticky note, and the man is on the right, also pointing at a sticky note. The background of the illustration is a light orange color with a soft, cloud-like shape behind the whiteboard.
